The
Clemson College Annual
of 1907

Published Annually by the
Corps of Cadets
of Clemson Agricultural and Mechanical College
of South Carolina
GREETINGS

to
all our
READERS.
Dedication.

To Col. B. W. Simpson
Life Member and President of
the Board of Trustees,

Who has worked long and faithfully in behalf of Clemson College,

this volume is respectfully dedicated by

The Class of 1907
Preface

The Clemson College Annual of 1907 is now placed in your hands.

For the Clemson man, especially for the one who is just graduating, his Annual, next to his diploma and his friendships, should be the dearest possession that he takes with him upon leaving College; for it will always be with him to remind him of the old friends and associations, long after the passing years have taken the realities from him; and within its pages it will permit him to live again those happiest days of all that have been his to spend.

Such, then, should be the object of the Annual, and this object the Editors have endeavored to accomplish. To the Clemson boy, these pages will explain themselves; but for the uninitiated, some further interpretation may be necessary—and therein will lie half the pleasure for the owner of the Annual; for is there anything that can surpass the delight of going over our College experiences with our friends?

That every Clemson boy may find something of interest in this volume, and that from it the outsider may get some idea of the active and varied life here at Clemson, is the parting wish of

THE EDITORS.
Board of Editors

L. Boggs, Editor-in-Chief

Board of Visitors for the Session of 1906-1907

Meeting first Wednesday in May.

First District—Hon. Huger Sinkler, Charleston.
Second District—Hon. G. L. Toole, Aiken.
Third District—Hon. Chas. H. Carpenter, Pickens.
Fourth District—Hon. Thos. P. Cothran, Greenville.
Fifth District—Hon. J. G. Richards, Jr., Liberty Hill.
Sixth District—Hon. R. P. Hamer, Jr., Hamer.
Seventh District—Hon. Altamont Moses, Sumter.
Faculty

PATRICK HUES MELL, Ph.D., LL.D.
President

AGRICULTURAL DEPARTMENT

JOSEPH NELSON HARPER, B.S., M. Agr.
Director of Department Professor of Agriculture

FRED HARVEY HALL CALHOUN, Ph.D.
Professor of Geology and Mineralogy

CHARLES CARTER NEWMAN
Associate Professor of Horticulture

CHARLES EDWARD CHAMBLISS, B.S., M.S.
Associate Professor of Zoology and Entomology

LOUIS AMOS KLEIN, V.M.D.
Associate Professor of Veterinary Science

JOHN MICHELS, M.S.
Associate Professor of Animal Husbandry and Dairying

CLIFFORD LEWIS NEWMAN, M.S.
Associate Professor of Agriculture

HOMER DOLIVER HOUSE, B.S., M.A.
Associate Professor of Botany and Bacteriology

JUNIUS MILTON BURGESS, B.S.
Herdsman

M. R. POWERS, D.V.M.
Assistant in Veterinary Science

MECHANICAL AND ELECTRICAL DEPARTMENT

WALTER MERRITT RIGGS, E.M.E.
Director of Department

SAMUEL BROADUS EARLE, A.M., M.E.
Associate Professor of Mechanical Engineering

THOMAS GRAYSON POATS
Associate Professor of Physics

RUDOLPH EDWARD LEE, B.S.
Associate Professor of Drawing

JOHN HILLIARD HOOK, B.S.
Assistant Professor of Wood-work

WILLISTON WIGHTMAN KLUGH, B.S.
Assistant Professor of Drawing
ORVILLE H. BISSELL

"Come then, my friend, my genius, come along:
The master of the poet and the song."

Orville, otherwise known as "Shrimp," was born at "Over Home"—Charleston, S. C., upon the 2nd day of September, 1886. He entered the Charleston Public and High Schools, and in 1902 entered Clemson College, where he pursued the Civil Course until he was graduated. "Shrimp" was a member of the German and Senior Dancing Clubs, and Secretary and Treasurer of the Glee Club. He was also a member of "The Tiger's" baseball team of '05. His musical nature and gentle disposition have won him many friends.

TITUS LUCRETIUS BISSELL

"All sounds on fret by string or golden wire
Temper'd soft tunings intermix'd with voice.
Choral or unison."

Bissell, T. L., was born December 7th, 1887, in Charleston, and was prepared for Clemson in the Charleston Graded and High Schools. In September, '03, he entered the Freshman Class at Clemson, and therein continued in the Electrical Course until his graduation. "Tite's" many interests kept him always busy; for he was a musician and athlete, as well as electrician. He was 1st Bass in the College Quartette; was a member of the Glee Club; played clarinet in the Clemson Band during his entire four years; and played mandolin in the Clemson College Orchestra. He was also a member of the German Club, of the Senior Dancing Club, and of the '07 Tennis Club. Athletic Editor of "The Tiger," '07. Catcher on Varsity baseball team, '04-'05, '05-'06, '06-'07; Captain of team, '07.

"Tite" may enter the telephone business, but he will design power houses for a pastime.
LeROI BOGGS

"His soul was like a star and dwelt apart."

Popularly and affectionately known as "Doctor," or Boggs. He became a member of the great commonwealth of Pickens on November 21st, 1883. There he received the primary education that fitted him for the Freshman Class at Clemson, September, 1903. In Fresh, he won the medal for being the best drilled cadet in College, but further military honors were curtailed by his joining the Band. Not so his other attainments. He was Recording Secretary, Vice-President and President of the Calhoun Society; Junior Editor of the '06 Annual, and Editor-in-Chief of the '07 Annual, and member of the Executive Committee of the S. C. I. O. A. He belonged to the German Club, Senior Dancing Club and '07 Tennis Club. He threw his lot with the Electricals.

Boggs will work for the G. E. C. for one month, after which time he will edit a county paper at Pickens, S. C.

STANLEY ISRAEL BOND

"'Tis remarkable that they
Talk most who have the least to say."

"Cy" first came into the world in the "city by the sea." March 20th, 1887; received his early education in the Charleston, Bennett and Beaufort Graded Schools, the latter being at his present home; entered Clemson September, '03, taking Agricultural Course; member of Palmetto Society, and sub. on '06 Varsity baseball team.

"Cy" will become rich in the cultivation of "rice-fields." near Beaufort.
THOMAS NORWOOD BRISTOW

"Who could sweetly sing,  
Or with rosin'd bow torment the string."

The Pee Dee Advocate, published in Bennettsville, the county seat of Marlboro county, in its issue of August 31st, 1886, contains notice of the birth of a boy, who is to-day known in Clemson circles as Bristow. The Marlboro Graded Schools gave this boy his start in education, and turned him over to Clemson in September, '03. "Bris" is noted as an entertainer, since his music never has failed. He was a member of the Glee Club, '05; bass player in the Clemson Band, and 'cellist in the Clemson College Orchestra. "Tail" was also a member of the German Club, the Senior Dancing Club, and the '07 Tennis Club. The Electrical Course chose him at the beginning of his Sophomore year.

After installing an electric fire alarm system in Pendletonville, Bristow will take charge of the Pendleton Power Plant.

ARCHER KENNEDY BRITT

"Beautiful in form and feature.  
Lovely as the day,  
Can there be so fair a creature,  
Formed of common clay?"

Britt, sometimes known as "Bigun," first came upon the scene of action at the little town of Sandover, S. C., January 24th, 1883; received his early education at the Buffalo and McCormick Schools, the latter being situated at his present home. Entered Clemson September, '03, taking Civil Engineering. Member of Palmetto Society; Sergeant-at-Arms, Palmetto Society.

"Bigun" will some day become Chief Engineer in the construction of "The Japan Canal."
JOHN JONES BROWN
CORPORAL, SERGEANT, LIEUTENANT

"Poetic fields encompass me around
And still I seem to tread on classic ground."

"Jonas" entered this old world of trouble September 7th, 1886, at the historical old town of Cowpens, S. C., and still signs up from that place. Received his early education from Cowpens Graded School and at Spartanburg Graded School. On September 3rd, 1903, entered Clemson College, joined the famous band of Freshmen, and has been toiling upward with us ever since. He was a member of the Senior Dancing Club and the German Club.

He will run a cattle ranch at "Cowpens."

ARCHIBALD LAWRENCE CAMPBELL

"His sparkling rallies bubbled up as from aerated natural fountains."

This young Mark Twain first saw the light of day in Walterboro, S. C., on the 18th of January, 1886. You will please forgive me, dear readers, but I must exonerate my good friend by telling you that the nickname of "Booze" is very inaptly applied. He is a camel by name; but, unlike all other animals of his kind, he cannot go eight days without a drink—of water, of course. "Booze" received his early education in Brunson, Allendale, and at Morrison's Preparatory School. He entered Clemson in the fall of 1903, and pursued the Civil Course, to which he has been a credit. "Booze" held the office of Corporal and Sergeant, and was Assistant Local Editor of the 1907 Annual, and Associate Editor of "The Tiger." This young Hercules always took to the side lines in athletics.
BERTE DANE CARTER
CORPORAL, SERGEANT, 1ST LIEUTENANT

"A man who could fight, a battle, support a State, or grace a banquet."

Little was known of the hamlet of Lodge, until it was made famous by the birth of "Birdie," April 20th, 1883. He received his primary education in the Bamberg and Colleton Public Schools. This and his Prep. course at Clemson were so efficient that he stayed at home in 1902 and taught school. Returned to Clemson in 1903 to join the first class of A. I.'s. "Dave" held the offices of Prosecuting Critic, Literary Critic, Secretary and President of the Literary Society; was Literary Editor of the Chronicle of '06-'07, and won the Debater's medal in his society in 1907. He was a member of the Senior Dancing Club. Carter was on the Class football team in Fresh., guard and tackle on the scrub team in Soph., and Junior, and left guard on the famous Varsity team of '06.

"Birdie's" present address is care of Chief of Police, Anywhere.
He will probably be a fisherman in the Salkahatchie River swamp.

JOHN CALVIN CLARK

"What if it does rain to-morrow.
It is fair weather to-day."

"Ichabod"—in no way connected with the character in the Legend of Sleepy Hollow, but a product of Marion county—was born August 29, 1884. He began to train his mind in the public schools of the county; but, being ambitious, he entered Clemson, September, 1901, and has since won distinction in the Animal Industry Course. In the Columbian Society he held the offices of Secretary and President. He was President of the South Carolina Collegiate Oratorical Association. Was Editor-in-Chief of The Chronicle, Associate Editor of '07 Annual, member of Senior Dancing Club, and played right guard on Class football team, '05-'06.
FRANCIS AMBROSE CONNOR
CORPORAL, SERGEANT

"No man is the wiser for his learning; Wit and wisdom are born with a man."

Frank, though better known as "Tar-cus," first saw the light in the town of Coke-bury, S. C., October 4th, 1885; received his early education in Laurens and Greenwood Graded Schools; entered Clemson September, '03, taking the Electrical Course. Member of Senior Dancing and Tennis Clubs.

Will in the near future erect a trolley line in the town of Greenwood.

EDWARD ALEXANDER CRAWFORD
CORPORAL, FIRST SERGEANT, CAPTAIN

"I was not born for courts or great affairs; I pay my debts, believe, and say my prayers."

"Alex" was born in McConnellville, S. C., and received his early education in the public schools of that town. He began the struggle for a diploma at Clemson September 5, 1903, and at once became interested in Scientific Agriculture. He has done a great deal of research work on the subject of Angora goats. In his Junior year he astonished the scientific world by discovering "nervine in oats" and "perforated holes in rocks."

"Alex" is a member of the Calhoun Literary Society, in which he held the offices of Secretary and Vice-President. Associate Editor on the '07 Annual staff, President of the Y. M. C. A., and Secretary of the Sunday School in his Junior year. He played Class football in '04, '05 and '06. "Alex," being very fond of goats and dairying, took the course in Animal Industry, and will probably devote his time to the scientific study of "butters."
HENRY CECIL CRUM
CORPORAL, SERGEANT, LIEUTENANT

"Though matrimony has some pains, celibacy has few pleasures."

Cecil began life at Denmark, S. C., March 10th, 1887, and still calls that his home. Received his "primary" instruction in the Denmark Graded School, where they kept him until September, 1903, when he came to Clemson and entered "Prep.;" but, the "Prep. Kingdom" did not suit him, so after three weeks he abandoned his friends in that class and moved up into "Fresh." Agricultural Course. Member of Senior Dancing Club.

Will get married and farm near Denmark.

GEORGE DAVE CURTIS
CORPORAL

"He was made up of love and charms; whatever maid could wish or man admire."

"Tabby."

"Tabby" was born at Aiken, S. C., on December 11th, 1886, but has since "crossed over into Georgia" and now lives in Savannah. Received early education in Savannah Graded and High Schools. Entered Clemson September, 1903. Member of Palmetto Literary Society; Local Department of Annual Staff; Tiger Staff; Senior Dancing Club; German Club; Senior Tennis Club, and Glee Club. Served on 1906 Hop Committee. Played on Class football team '05-'06. Track team '05-'06-'07. Civil Engineering Course.

He will be chief engineer for the Anderson Rapid Transit Company.
ROBERT ERNEST DALTON

CORPORAL, SERGEANT, LIEUTENANT

"The pain of one maiden's refusal is drowned in the pain of the next."

Dalton, better known as "Skinny," or "Prep.," first discovered the world in the little town of Grove, S. C., June 16th, 1884. Received early education at Grove Academy, which is situated at his present home. Entered Clemson September, 1902, taking Civil Engineering. Member of Senior Dancing Club. "Prep." will some day in the near future gain for himself a world-wide reputation in the construction of the Panama Canal.

CHARLES EDGAR DURANT

"Think not silence the wisdom of fools."

"Dury" first made his appearance in Cottageville, S. C. (see map of Colleton county), on the thirty-first day of January, in the year of our Lord, 1885. This young stynxman was born with a compass in his hand, and after completing the work at the Cottageville High School, his needle pointed him to Clemson, where he entered in 1902. "Dury" followed the course in Civil Engineering, and he has rapidly risen, not only in his chosen profession, but also in the esteem of his fellow classmates. Although a man of but few words, he was always pleasant and companionable.
FRANK MARION DWIGHT
CORPORAL, SERGEANT

"The proverb holds, that to be wise and love
Is hardly granted to the Gods above."

"Dwight" first saw the light, October 19th 1884,
somewhere in the swamps of Sumter county, but
has since changed his place of living and now signs
up from Wedgefield, S. C. His early education
was received in the county free schools, and
Wedgefield Graded School. Later, after much
persuasion, he was induced to come to Clemson.
Entered College in 1902. He was a member of
the Senior Dancing Club, and played football on
the Class team of '02-'03.
He will be Chief Electrician at Wedgefield, S. C.

THOMAS DOTTERER EASON
SERGEANT, LIEUTENANT

"Give not thy tongue too great liberty,
lest it take thee a prisoner."

"Teddy" was born in Abbeville, S. C.,
September 12th, 1887. Present address
is Charleston, S. C., where he expects to
live and die. Received his early educa-
tion at the Charleston High School
and Charleston Public School. Joined the
Freshman Class at Clemson in 1903, and
took the Agricultural Course. "Teddy"
was a very enthusiastic society man, and
held the offices of Censor, Secretary,
Literary Critic, and President of the
Palmetto Society. Was one of the Com-
 mencement Orators '07, and ably filled
the office of Business Manager of the
Chronicle, '06-'07. One of the Art Edi-
tors on the '07 Annual Staff, and mem-
ber of the Senior Dancing Club.
He will be a great Botanist and a rival
of Luther Burbank in propagating new
species of plants.
ROBERT ADDISON EASTERLING
CORPORAL, SERGEANT, CAPTAIN

"I would forget her, but like a fever, she reigns in my blood, and will remembered be."

"Bob" first became known to the world in the little town of Barnwell, S. C., September 28th, 1885; received his early education in the Barnwell High School; entered Clemson September, 1903, putting forth every effort to become an "Electrical Engineer;" member of Senior Dancing Club; German Club; '07 Tennis Club.

"Bob" will seek his fortune endeavoring to invent some means by which he can procure high starting "troque" for large capacity motors.

GEORGE HAMILTON FOLK
SERGEANT, SECOND LIEUTENANT

"I consider him my friend who makes me do as much as I can."

Folk was born near Pomaria, S. C., Newberry county, January 19, 1886. He received his elementary education in a neighboring school. He came to Clemson in September, 1903, pursuing there the course in Electrical Engineering.

Folk was a member of the Calhoun Literary Society, holding at times the offices of Chaplain and Critic. A member of the Senior Dancing Club.

"Hamp" likes the country and the farm. He will go back to Pomaria and become a soil tiller. No doubt he will add many luxuries to his home thro' the development of a nearby water power.
FRITZ MAHOLMES FURTICK
CORPORAL, QUARTERMASTER SERGEANT, CAPTAIN,
AND QUARTERMASTER

"His life was gentle and the elements
So mix'd in him that nature might stand up
And say to all the world 'This is a man!'"

Fritz made the town of Sandy Run famous by being born there on July 2, 1883. He received his early education at the Sandy Run Academy and St. Matthews Graded School, and entered Prep. in September, 1902, Electrical Course.

He immediately began his athletic career, and has acquired the reputation of being one of the best athletes in Clemson's history. He made sub. half on Varsity in his first year and since that time has played right-half regularly, not missing a game in four years. Captain of the '06 team. Member of the Track team since '04, and Captain of the '06 and '07 teams.

Class President for four years. Member of Columbian Society, in which he was Reporting Critic, Prosecuting Critic and Vice-President; Senior Dancing Club; German Club; '06 Hop Committee. Chief Marshal '06 Commencement.

HUGH ELMORE GILES

"SECOND SECTION MARCHER IN FRESH."

"It ain't no use to grumble and complain. It's jest as cheap an' easy to rejoice."

"Tubbie" was born twenty years ago in the enterprising town of Greenwood. He received his early education in the Greenwood Graded Schools. He was a Clemson recruit in the Fall of 1903.

Member of the Senior Dancing Club. Tho' "Tubbie" has done well in the course of Electrical Engineering, he will be a country preacher; he will be the pastor of five churches.
JOHN RICE GODLEY

"Silence has become his mother tongue."

Godley was born at Walterboro, S. C., November 18, 1880, and is still a resident of Colleton county.

He received his early education in the public schools of that county and came to Clemson in September, 1901. He was forced to miss the session of 1902-'03, but returned at the beginning of the next and joined the Electrical Class of '07.

RICHARD GRAY HARRIS

"His corn and cattle were his only care. And his chief delight a county fair."

"Walhalla" first saw the light at Young's, Laurens county, S. C., May 16th, 1885. Present address Gray Court, S. C. He received his early education at Wallace Lodge. Came to Clemson in 1903 and joined the Agricultural aggregation. Held the offices of Corresponding Secretary and Literary Critic in the Calhoun Literary Society. As he had no military aspirations, he was a member of the Hospital Corps, commonly known as the "Horse Marines."

"Walhalla" has taken a great interest in dairying, and, when he leaves Clemson, he will run a co-operative creamery in Laurens county.
"Maussa, you means dat niggah Rastus, he's de trikuest, ugliest niggah—but I likes him."

Rastus became a disturber of the peace at Allendale, S. C., on January 8th, 1886. Presumably he was sent to cause the good people of that quiet little village to break their New Year’s resolutions; and the old inhabitants say that he was a howling success. Some go so far as to say that he was one of the causes of the earth-quake that occurred later in the same year, but there is some doubt about this. He attributes his present high standard of scholarship to the foundations laid in the public schools near Allendale. Entered Clemson in 1902, but stayed at home the next year. Returned in 1903, and cast his lot with the straight Agriculturals. He was a member of the German Club, and of the Senior Dancing Club, in which he was Vice-President. He was Captain of the Scrub eleven of '04, Sub. on Varsity, '05, and left guard on Varsity, '06.

Rastus will do errands for the ladies at Allendale.

ARTHUR MILWEE KLUGH

CORPORAL, SERGEANT, CAPTAIN

“To be glad of life because it gives you a chance to love, and to work, and to play, and to look up the stars.”

Klugh was born in Greenwood county, near Coronaca, January 20, 1887. After attending the Coronaca High School, he came to Clemson in the Fall of 1903, pursuing the course in Agriculture. Associate Editor of the '07 Annual. Secretary and Treasurer of the Senior Dancing Club, and a member of the Tuesday Afternoon Club.

Klugh’s first achievement will be the winning of a heart.
WILLIAM ALEXANDER LATIMER
CORPORAL, SERGEANT, 1ST SERGEANT, CAPTAIN

“If wit so much from ignorance undergo,
Ah, let not learning to commence its foe!”

“Bill” came into the world of trouble October 13th, 1882, in the historic town of Chester, S. C. He received his early training in the Chester Public School, but realizing that there was something better in store for him, he joined the class of ’07 in 1903 and pursued the Course in Civil Engineering. Member of the Senior Dancing Club, and Calhoun Literary Society. Played sub. quarter on football team of 1905, and sub. half on team of 1906, when he won a block C for his star playing.

“Bill” will win fame and wealth by surveying and building a railroad over the Blue Ridge Mountains.

ROBERT HOWE LEMMON

“Seest thou a man diligent in his business,
He shall stand before kings.”

“Mary” was born at Winnsboro, November 17, 1884. He attended the Greenbriar Graded Schools and entered Clemson September, 1903, to become a farmer. Held the offices of Sergeant-at-Arms, Vice-President and President in the Palmetto Literary Society, and was a member of the Senior Dancing Club.
HARRY GASQUE LEWIS

"Beauty, and youth, and sprightly hope."

Harry, or to be more explicit, "Pete," was born at Oakhurst Farm on February 19th, 1884. He was brought up in a Clemson atmosphere, since our campus became his home while he was still in kilts.

He attended the Clemson Private School, and since Clemson had been his inspiration, it very naturally became his choice when the time came for him to finish his education, so he entered our College in September, 1899, and enrolled with the Agriculturals.

Harry aspires to a "V.C." position, but his lot will ultimately be a Chair of Agriculture in some A. and M. College.

HENRY POWELL LYKES

CORPORAL, SERGEANT, LIEUTENANT

"He hath a kind of honor sets him off."

Powell was born at Winnsboro, September 2, 1885, but afterwards moved to Lykesland, Richland county, where he still resides. He received his early education at the Lykesland High School, entered Clemson September, '03, and signed up for the Animal Industry Course. Played full-back on Class team, '05; left end on Varsity, '05 and '06. Right field of Varsity baseball team, '06 and '07.

Member of the Columbian Society in which he held the offices of Prosecuting Critic and Reporting Critic. Member of Senior Dancing Club, '07 Tennis Club, Commencement Hop Committee. Chairman of the Morals Committee, Chairman of the Social Committee. Literary Editor of Annual Staff, Athletic Editor, Tiger Staff.
CECIL WALKER MACK
CORPORAL, SERGEANT, 1ST SERGEANT

"But see how oft ambitious aims are crost,
And chiefs contend till all the prize is lost."

"Mack" is a native of Cordova, S. C. (see map of Orangeburg county), where he was born December 10th, 1882. Received his early training in the Public Schools of Cordova; but realizing that he needed a broader education, he came to Clemson in 1902 and helped swell the ranks of the Electricals. Was a member of the Columbian Society, in which he held every office except President and Vice-President. Edited the Exchange Department of the "Chronicle" in '03-'04. "Mack" will win fame by building a modern electric street railway at Cordova.

EDWARD DOUGLASS McCUTCCHAN
CORPORAL, 1ST SERGEANT, CAPTAIN

"Forthwith from the dance, we proceed to more pleasant repasts."

"Mac."
"Mac" first saw the light at Wedgefield, Sumter county, S. C., on September 22nd, 1884, but now hails from the city of Sumter. Received early education in Sumter Graded Schools. Entered Clemson September, 1903, and took the Electrical Course. Member of Senior Dancing Club and of German Club. Played Class football '04-'05.

Will be an Electrical Engineer, located somewhere near Atlanta.
HENRY WALTER MOORE
CORPORAL, SERGEANT, LIEUTENANT

"The critic eye that microscope of wit,
Sees hairs and pores, examines bit by bit."

"Judge" or "Corporation" discovered this world at the old historic town of Pendleton, S. C., January 23rd, 1878, but has since journeyed over into Oconee county and settled at Okeway. His early education was drilled into him from a blue-back speller at a country school house in Oconee county. "Judge" entered the ranks of the Freshman Class at Clemson in September, 1902, but was absent from College during the session of '03-'04. Returned in September, 1904, and resumed the scrap for a sheep skin, with even more ardor than before. He was a member of the Senior Science Club, where he held the office of Secretary and of Treasurer. He was a very hard worker in the Columbian Society, in which organization he held the offices of Literary Critic and Treasurer.

"Judge" will return to the red and rugged old hills of Oconee county, and revolutionize the dairy industry of that section by establishing a Co-operative Creamery.

JAMES WARD MCLENDON
CORPORAL, COLOR SERGEANT, LIEUTENANT, AND QUARTERMASTER

"Happy am I, from care I am free,
Why aren't they all contented like me?"

Behold! another George Washington! Known to ornithologists as "Mac" and to Prof. Furman as "Our Fat Friend." He was born February 17, 1885, at Timmonsville, S. C., where his early youth was spent in raising chickens, and he still holds that there is no higher authority on this subject than himself. We suppose that his present ability to tell wonderful stories was gained through long practice in lauding the merits of his feathered pets to the natives of Timmonsville.

"Mc" received his early education at the Timmonsville Public and Private Schools, made a flying trip to Welsh Neck High School, entered Clemson September 10th, 1902, and selected the Agricultural and Animal Industry Course. He was a member of the Columbian Literary Society, and was Prosecuting Critic, Reporting Critic, Secretary, and President. Was Local Editor '07 Annual, member of German Club, Senior Dancing Club, and '07 Tennis Club.

"Mc" will probably be a patent medicine sales-man, with a small comedy company as a side issue, and poultry raising as a pastime.
SPENCER RICE PERRIN

CORPORAL, BATALLION, SERGEANT, MAJOR, CAPTAIN, AND ADJUTANT

"Oh! bless'd with temper whose unclouded ray
Will make to-morrow as cheerful as to-day."

This good-natured, brown-eyed cadet began to train his voice in Union, S. C., September 3rd, 1885, but never had the pleasure of putting it to any official service until appointed Adjutant of the Corps of Cadets at Clemson. He received his early education in the Union Graded Schools, where he probably did well, judging from what he has accomplished since he entered Clemson, September 5th, 1903, for he was easily the leader of his section. Spencer has been fortunate enough to hold offices in nearly everything he entered, as he was marcher of his section, President of the German Club, Manager of the '07 Tennis Club, a member of the Senior Dancing Club. Has held the offices of Censor, Treasurer, Secretary and President of the Palmetto Literary Society, and served on the Hop Committee in 1906.

Spencer says he is strictly a Union man, therefore a firm believer in the ten-hour day. His present address is Union, S. C.

As he is a Textile, he will probably spin yarns to the factory maids in Union, and devote his spare time to the completion of his greatest Literary production, a 1 act Comedy entitled, "What Steve Saw at the Fair."

DANIEL BYRD PEURIFOY

"Orators may grin, for their faculty abides
Not in their heads, but in their sides."

"Peury" was born at Havirdsville, January 28, 1887. He received his early education at the Walterboro and Greenbrier Graded Schools, and entered Clemson September, 1903, pursuing the Animal Industry Course. He joined the Columbian Literary Society and held the offices of Literary Critic and President. He won the Orator's medal, '06, and the Trustee's medal awarded in June, '06. Was Local Editor of "The Tiger," and member of the Senior Dancing Club.
EDWARD BOLLMANN PLENGE
CORPORAL, SERGEANT, COLOR SERGEANT, CAPTAIN

"Few words, but to effect."

This Solon from the "City by the Sea," being too dignified for a nickname, has always been spoken of, by "the boys," as "Plenge."

Plenge was born in Charleston, S. C., on August 24th, 1886. He received his early education in the Bennett Public and Charleston High Schools. Becoming too wise for those institutions of learning, he migrated to Clemson in September, '03, and has been leading the race for knowledge in the Electrical Department ever since. He has been Critic and Vice-President of Calhoun Society. Literary Editor '07 "Annual" Staff, member Senior Tennis and Senior Dancing Clubs. Present address, Charleston, S. C.

Plenge will some day astonish his friends by working a problem wrong.

CHARLES THEODORE POTTINGER
CORPORAL, SERGEANT

"What studies please, what most delight,
And fill men's thoughts, they dream them o'er
at night."

"Theo" is another one of our "Georgia Crackers," who chose wisely and well when he entered Clemson in September, '03, and took up the Electrical Course. "Pottie" was born in Savannah, Ga., November 9th, 1887, and was educated up to the Clemson point in the Savannah Graded and High Schools, and in the Savannah Preparatory School. Savannah still has this Georgian's heart, though he has thought seriously of the opportunities afforded by the city of Columbia. Pottinger was a member of the Art Staff of the '06 Annual, Chief Art Editor on the staff of the '07 Annual, and member of the Senior Dancing Club.

Although "Theo" has artistic inclinations, yet he will never give up Electricity; for he will soon take charge of the Savannah Electric Company, whose Board of Directors has been anxiously awaiting his graduation.
Paul Quattlebaum

"Agree if you can. If not, dispute it like a man."

Paul began his earthly career at Conway, S. C., February 25, 1886, at which place he still resides. He received the rudiments of knowledge at the Burroughs Graded School, and entered Clemson September 5, 1903, signing up for the Electrical Course.

Member of the Calhoun Society, in which he held the offices of Sergeant-at-Arms, Chaplain, Treasurer, Critic, and President. He also revised the constitution of the society during the summer of 1906. Member of the Senior Dancing Club. Exchange Editor on Tiger Staff. Treasurer of Y. M. C. A., Delegate to State Sunday School Convention, 1906, and Nashville Convention Student Volunteer Movement, 1906.

Obie M. Reid

Sergeant, Lieutenant

"Charms strike the eye, but merit wins the soul."

Obie gave vent to his first wail at Moffettsville, Anderson county, October 28, 1885, but finding that place too small for his expanding abilities, he has since removed to the city of Anderson. His early education was given him at Moffettsville Academy and the Anderson Graded School. He is another of that gallant band that entered College in September, '03, and since that time has been struggling to master the intricacies of Electricity.
SAMUEL FRASER REID
CORPORAL AND SERGEANT
"Fix your eye upon excellence."

Sam was born at Lowndesville, S. C., on August 21st, 1882. His early education was received in the Public Schools of Abbeville county. About this time, being unable to learn to spell the name of his native town, he moved to Abbeville. Finding trouble with that name also, he became discouraged, and came to Clemson in 1902. He took the Agricultural Course, with special attention to Chemistry. He belonged to the Palmetto Society, in which organization he had the office of Vice-President. Sam played star ball on the class teams of '05, '06.

SAMUEL ROSEBOROUGH RHODES
"Of all men, respected and admired."

Sam was born in Darlington county, July 27, 1881, but afterwards moved to Florence, where he still resides. His early education was received at the Florence Graded School. When still quite a lad, he entered Furman; and, after a four year's course, was graduated with honors. Sam then began teaching, but feeling destined for greater things than teaching young America the A. B. C.'s, he decided to take up engineering; so he joined the Class of '07, in September, '05, and signed up for the Electrical Course.

Member of the Senior Dancing Club. Editor-in-Chief of "The Tiger," Associate Literary Editor of the Annual. Beginning as a special, he held no military offices.

Sam will rise as high professionally as he has risen physically.
RUFUS GORDON RICHARDSON

"All's well that ends well."

"Runt," better known as "R. G." gave vent to his first (and only) yell of dissatisfaction at Brunson, S. C., on June 30th, 1886. Not being satisfied with the climate of his birth place, he soon moved to Beaufort, S. C., where he could enjoy the sea breezes and eat oysters to his heart’s content. He has brown hair and eyes, and during his spare moments he has somehow managed (possibly by the aid of sea breezes and oysters), to attain the height of 5 ft. 5 1/2 inches, and the weight of 123 pounds. After receiving a start in the direction of learning, from the Beaufort Graded and Morrison’s Preparatory Schools, he entered Clemson in September, ’03, and cast his lot with the C. E.’s. Member of Columbian Society and a “Side Line Artist” at all athletic games. Present address: Latta, S. C.

"R. G." will always advise you to “hold your point.”

GEORGE DEPRE SANDERS

“A little joy, a little sorrow—what a quiet uneventful life.”

Being variously known as “Asbestos,” “Pepettee,” “Doctor,” “Whole Corn,” or “Georgie.” He was born at Fairfax, S. C., May 31st, 1887. Received his primary education at the Fairfax Graded School. George is very quiet and retiring, and his mistakes made in moments of excitement, are responsible for his many nick-names. He took the Animal Husbandry Course, intending to raise pug dogs and white rabbits for the amusement of the feminine population of Hendersonville, N. C. He was a member of the Columbian Society and of the Senior Tennis and Dancing Clubs.

George will manufacture asbestos tapers.
EATON LOVE SAUNDERS

"These should be hours for necessities, not for delights."

"Punk" first began burning at McConnellsville, S. C., on August 4th, 1887. After getting the best to be had from the McConnellsville High School "Punk" had no desire to hide his light under a bushel; so he came to Clemson in September, '03, and joined the "bridge gang" among whom he has been a shining light ever since. Member Calhoun Society. Present address, McConnellsville, S. C.

Being of a very retiring disposition, "Punk" will no doubt court by correspondence and marry by proxy.

WILLIAM LEON SCHACHTE

SEARGEANT. 1ST LIEUTENANT, CHIEF MUSICIAN

"Speak well of everyone if you speak of them at all—no one of us is so very good."

In Charleston, so circled with a halo of warmth, beauty, culture, and style, "Shack," sometimes remembered as "Dynamite," was born on the 20th of June, 1886. He received his early education in the Bennett Public School and the Charleston High School. He entered Clemson in the Fall of 1903.

"Shack" was Assistant Business Manager of the '07 Annual, President of Calhoun Society, member of the Senior Dancing Club and the German Club. And Right End on the Class Football team in 1905 and 1906.

Schachte will not be a great orator, but will plead most effectively with a little friend of his.
FRANCIS BONNELL SCHIRMER

“There’s a divinity that shapes our ends. Rough-hew them how we will.”

“Mooney” hails from the “Battry,” and was born in historic Charleston on the 18th of August, 1887. Our friend, “Mr. Schirmer,” received his early education at Craft’s School in his native city; but feeling that his calling in life demanded a higher education he entered Clemson in the fall of 1901. “Mooney” left us for a year, but in 1903 he re-entered college and decided to try his chances with the Civils of ’07. Schirmer was a member of the Senior Dancing Club, and was an Assistant Art Editor on the ’07 Annual Staff.

“Mooney” may one day be City Engineer.

EDWARD MARSHALL SHINGLER

“If music be the food of love, play on.”

“Marsh” landed in Charleston, S. C., on December 5th, 1888, with the full intention of only spending Christmas there; but he was so well pleased with the town that he made it his permanent place of business. His early education was received at the Charleston High School; and, after getting all that was coming to him from that institution, he started out in search of new fields to conquer. This search brought him to Clemson in September, ’03, where he tried his luck with the “transit brigade.” Member Senior Dancing Club, member Track team, and played Class football, ’06. Present address, Charleston, S. C.

Will sit on the “Battry” ’til 9:30 P. M. waiting for the moon to “rise.”
WHITFIELD WILLIAM WANNAMAKER
CORPORAL AND SERGEANT

"Lord God of Hosts be with us yet,
Lest we forget, lest we forget."

"Sergeant," or "Whittaker," showed poetic symptoms even when very young, and it is said chose for himself his alliterated name. He should have been born in some place abounding in sentimental traditions, and having a poetic atmosphere, but he absent-mindedly stopped in the live town of St. Matthews, and so far his poetic impulses have been balked. This catastrophe occurred on July 16, 1886. His first schooling was in the St. Matthews Graded School. However, being a young man of high ideals, and desiring a closer communion with Nature than he could get in St. Matthews, he came to Clemson in January, 1904, and took the Agricultural course. He joined the Columbian Society, where he held the office of Prosecuting Critic.

"Sergeant" will marry money, and spend the rest of his life studying Shakespeare.

LAWRENCE STAFFORD WOLFE

"Youth on the Prow,
And pleasure at the helm."

This Wolfe is not a Canadian, as you might suppose; but is an Orangeburgian, both by birth and residence. It was this little city whose peace and dignity he disturbed by his first howls, October 10th, 1888. As soon as old enough he was sent to the Orangeburg Graded Schools to be tamed; but finding that he was becoming wilder, he was sent to Clemson, September 5, 1903, where the miraculous feat has been accomplished. "Blinkey's" military aspirations were not very high, as he was satisfied with a color guard in Junior and the Hospital Corps in Senior. He is a member of the German Club, and Senior Dancing Club. He took the Animal Industry Course.

He will develop the economical possibilities of the Bufo lentiginosus Americanus (toad).
OLIVER DeWITT WOOD

"I have sworn not to be awed by the pomp of power nor the glamor of ceremony."

Answers to the name of "Jabo," or "O. D." He was born on November 30, 1886, and Greers, S. C., bears the responsibility of sending him forth. His early education was obtained in the Greers Graded School, where he took (besides the regular courses), a course in fluency of speech. In 1903 he came to Clemson, where his friends, believing that the whirr and roar of machinery would check his talkativeness, persuaded him to take the mechanical course. He belonged to the Palmetto Society, where he held the offices of Sergeant-at-Arms and Prosecuting Critic. Was a member of the Junior and Senior Dancing Clubs. "O. D." was a great rooter and was unanimously elected Chief Rooter for the football team of '06.

Wood will organize and manage a baseball team at Greers.

WILLIAM HARRY WYLIE, Jr.

"Aim high and consider yourself capable of great things."

On September 4, 1887, at Lewis, S. C., Chester county, Harry, or "Skin P.," was born. His parents moved to Rock Hill in 1893. In the Rock Hill Graded School he received his early education.

Harry came to Clemson September 19, 1903. He has held membership in the German and Senior Dancing Clubs, the '07 Tennis Club, and, a Cracker Club. Also a member of the Sub. Baseball Team of '06.

Harry took the Electrical Course. He will organize and control a hydraulic electric power plant.
PRESIDENT P. H. MELI.
Clemson College

In the northwestern corner of South Carolina, almost at the upper limit of the Piedmont Belt, and lying partly in Oconee county and partly in Pickens, there is an estate—some thirteen hundred acres—of forest and farm. This estate is to-day the scene of immense activity, since here it is that the boys of South Carolina are being fitted to assume their share in increasing industrial activity of their State; and here it is, also, that they are learning that obedience to authority, and that regard for law and order which are prime essentials in good citizenship: for it is on this land that Clemson Agricultural and Mechanical College stands and grows year by year, rapidly making itself one of the indispensable among the educational institutions of the State.

The idea of a college like Clemson had its beginning in the great Farmers' Alliance movement of 1886, when the farmers began to see the need of agricultural education in order to fully develop the great resources of the State. The will of Thomas G. Clemson, probated in 1888, gave in trust to the State
of South Carolina, the old homestead of John C. Calhoun, together with about $60,000 in securities, for the founding and maintaining of the Clemson Agricultural College—thus exactly carrying out the farmers' idea. In 1889, The General Assembly accepted Mr. Clemson's bequest, and chartered the college; and in 1890, the Trustees began the work of building.

The doors of Clemson College were first opened to students on July 6th, 1893. The main building was burned in May, 1894, but this was not allowed to interfere with recitations; so that, with the exception of the annual vacations, the college has been in continuous operation since the first year, being now just in process of rounding out its fourteenth session, with more than four hundred graduates to its credit, graduates who are to-day holding important positions in almost every department of industry.

The object of Mr. Clemson's bequest was, primarily, the establishment of an agricultural college; but the demand for education and training along other lines has made it necessary to supply other departments. With the present equipment the college affords six four-year courses, each leading to the degree of B.S.: Agriculture; Agriculture and Animal Industry; Metallurgy and Geology; Mechanical and Electrical Engineering; Civil Engineering; Textile Industry. Each of these courses, while specializing thoroughly in the direction its name indicates, is yet broad enough in scope to give an excellent grounding in English, History and Political Economy, thus giving the student as many advantages of a liberal education as the necessary limited time will allow.

The only tax used in keeping up the college is that levied on fertilizers, a tax that, from its nature, is derived from all sections of the State; and that has never become a perceptible burden. Though the income from this source is considerable, it still leaves no large margin for the great expenditures that must need be made in supporting such an institution. For this is no ordinary college where books and board are the main requisites: Clemson is a small municipality in itself, exercising all the functions of a city government, from the building of roads and streets, to the supplying of water, sewerage, heat, light, and power.

While Clemson must exist, it must also grow to meet the yearly increasing demands upon it. The fact that more than two hundred South Carolina boys were last year denied admittance for lack of room shows the need for this growth. The management has realized this, and has commenced the construction of a new dormitory that will give room for two hundred additional cadets; the new power plant, just being completed, provides for an expansion that can cope with any reasonable increase for several years to come.
CAMPUS VIEWS
The electrical course, though generally admitted to be one of the most difficult at college, has nevertheless always been very popular, not only because of the opportunities for advancement which are afforded in this line of work, but also because of the fascination of the subject itself. In spite of the large number of graduates in the various colleges of the country, the demand for the technical graduate, due to the intense activity in all branches of electrical engineering, is still far in excess of the supply, so the young man here finds a comparatively uncrowded field.

It is obviously impossible to turn out a finished engineer in a four-year's course, and no attempt is made to do this, the design being rather to give the student a good scientific basis on which he may afterwards build, and at the same time to make his education as broad as possible. With this object in view, good courses are given in English, History, Political Economy, Geology, Chemistry, Physics, and Mathematics, besides the purely technical subjects such as mechanics, mechanical and electrical engineering.

In connection with this, instruction is given in shop work, drawing, and electrical laboratory. For the latter purpose there are two special and separate buildings. The Junior or Instrument Laboratory was built in 1896 and is
especially designed for electromagnetic work, having no iron or other magnetic material in its construction. It is well equipped with galvanometers, resistance boxes, and other necessary apparatus. The Senior or Dynamo Laboratory was designed and built by Professor Riggs in the summer of 1900. It is a single story brick structure containing, besides the laboratory, a lecture room and dark room for work with the X-ray and photometer. Its equipment of generators and motors together with all instruments for use in connection with them is one of the best in the South.

Because of the thoroughness of the course, Clemson graduates compare favorably with those of the great Northern colleges and a glance at the records will show that they hold positions of responsibility and importance.
SCENES IN MECHANICAL DEPARTMENT

FORGE SHOP

MACHINE SHOP

TESTING MACHINE

CORLISS ENGINE
Agricultural Department

This department of the college has made wonderful progress since the completion of the Agricultural Hall in 1904, and now offers a very broad and comprehensive course of study. Until that time, it had no building of its own, and consequently was very much hampered; but now with increased facilities, it offers every inducement to the student of the Natural Sciences.

Besides the Academic work, the Agricultural Course provides for instruction in agronomy, horticulture, animal husbandry, chemistry, veterinary science, geology, mineralogy, botany, bacteriology and entomology.

All the buildings used by this department are now equipped with first-class apparatus, and will in a short while be as good as any in the South; for, the increasing number of students who are pursuing this course will necessitate enlarge-
ment, both of laboratory room, and of the corps of instructors. The Chemical Laboratory is already said to be the best equipped in the South. The handsome new green-house has been completed, and is an ornament to the campus, besides being a modern building for scientific purposes. Besides these buildings, the following are used by this department: Veterinary Hospital, which is under the management of Dr. Klein; the dairy and barns, which are superintended by Prof. Michels; and the Experiment Station, in charge of Mr. Garrison, which is located about three-fourths of a mile from the campus.

We can truthfully say that this is the broadest course offered at Clemson College, and no man who has completed this course can say that he hasn't derived great benefit from being brought closer to Nature, by a better understanding of her laws as taught by this department.

A. M. KLUGH.
SCENES IN AGRICULTURAL DEPARTMENT
OF THE two buildings, the older one was first occupied in July, 1891, by Col. M. B. Hardin, Professor of Chemistry and Chief Chemist, with Messrs. Sims and Shiver as Assistant Chemists. These two gentlemen had been connected with the Fertilizer Department at the South Carolina College and were retained as Assistant Chemists by Col. Hardin, when the work of Fertilizer Analysis, State Analytical Work and the Chemical Work of the Experiment Station were transferred to his control in Columbia in the winter of 1890. Mr. J. P. Smith, then Secretary of the Board of Fertilizer Control, was also quartered in this building until the necessity for a Senior balance room arose in 1893. In November, 1891, Dr. R. N. Brackett, who had been elected Associate Professor of Chemistry, reported by order of the Board of Trustees for duty and joined the little party, with the expectation that the college would open the following February. Owing, however, to unavoidable delays in the completion of the main college building, the opening was postponed until July, 1893. Work incident to Fertilizer Inspection, the analysis of material sent on by people of the State, the chemical work of the Experiment Station, and
the equipment of the building for Academic work kept the occupants of the building busy. Col. Hardin not only directed all the work but found time for occasional analysis himself.

At this time Mr. Shiver was made Assistant Professor of Agricultural Chemistry.

As all of the work of the department increased from year to year, it became evident by 1898-99 that larger quarters were an absolute necessity. The new building that bears "1900" was, therefore, erected. This building was completed and equipped in 1901.

In order to fill the vacancies or add to the force necessary to do the constantly increasing work of the department, the following men served or are working in the department:

- Mr. C. W. Sims, resigned.
- Mr. C. McDonnell, Assistant Chemist Experiment Station.
- Mr. John Thompson, resigned.
- Mr. F. C. Atkinson, resigned.
- Mr. W. E. Dickinson, connected with the Experiment Station.
- Mr. J. H. Mitchell, Experiment Station Work.
- Mr. D. H. Henry, Assistant Chemist Experiment Station and Assistant Professor of Chemistry.
- Mr. Benj. Freeman, Assistant in Chemistry.

The work of the Department is Academic, State Analytical, and Experiment Station. The State work includes the analysis of Commercial Fertilizers in connection with the Fertilizer Inspection, analysis of materials sent in by people of the State, analysis for and in co-operation with the Experiment Station, and analysis for the State Geologist, Mr. Earl Sloan. The work is all done under the immediate supervision of Col. M. B. Hardin, Chief Chemist. The analysis of Commercial Fertilizers are made by Mr. McDonnell as first assistant in charge. The analysis of specimens sent in by people of the State are mainly made by Prof. Henry. Materials sent in by the State Geologist are analyzed by Mr. Robertson. The work for the Experiment Station is done mainly by Prof. Shiver, though during Prof. Shiver's illness in 1899, Mr. McDonnell carried out an investigation on rice; and Mr. McDonnell has, also, for the past two years, been engaged in the investigation of the production of starch from the sweet potato.

H. P. Lykes.
Civil Engineering Department

The report of the first curriculum committee of the Board of Trustees, which was adopted July 29th, 1891, two years prior to the opening of the college, provided for extensive courses in mechanical and civil engineering. This clause seems, however, to have been overlooked; for when the faculty was elected, no provision was made for instruction in civil engineering, only mechanical and electrical engineering being provided for.

This condition of affairs continued for some years. From the beginning, however, a brief course in surveying was given by the Mathematical Department, in connection with the work in trigonometry.

In President Craighead’s report to the Board of Trustees in 1896, we find the following: “If, as was once contemplated by the Board, students desiring it
are to have instruction in civil engineering. I recommend that this work be assigned to Assistant Professor Brodie, of the Mathematical Department. This report was adopted, and in 1897 a course was provided in mechanical and civil engineering, corresponding to the previously established course in mechanical and electrical engineering. These courses, as then arranged, were identical through the Sophomore class, the choice between the courses being made at the beginning of the Junior year. This plan was continued until 1903, when the curriculum was rearranged, and the civil engineering was given larger recognition among the published courses of the college. This course, as it has been from the beginning, is now under the direction of Prof. P. T. Brodie, who is at the head of the Department of Mathematics and Civil Engineering. He is aided by an adequate corps of assistants, consisting of Profs. Houston, Martin, Hunter, Shanklin, and Johnston. This department not only includes the civil engineering but also the thorough course of the college in pure mathematics.

Until recently, the number of students who chose the course was comparatively small; but they have usually been earnest men and an examination of the records will show that the civil engineers who have been graduated from the institution stand amongst the foremost of the successful Alumni of the college. Here, as at other institutions, the interest in civil engineering has recently received a marked impulse; and the course is fast growing in popularity. This may be attributed to many causes, among which may be mentioned the rapid increase in the South of railroads and other engineering developments. This has consequently made the demand for engineers greater and has caused a larger number to study civil engineering in this and other colleges. The class of '07 will graduate fifteen civil engineers. The training in civil engineering, as now provided here, is thorough in every particular, and compares favorably with that of any other similar southern institution.

In connection with the technical studies, liberal training is given in English, History, Economics and pure Mathematics, as well as the Physical Sciences. In common with the other engineering course of the college, the course also embraces a larger amount of drawing, shop work, mechanical engineering and laboratory practice—all of which is adapted to the needs of the civil engineer.

The distinctive work pursued by students in this course includes the study of land surveying and plotting, topographic surveying and mapping; location, construction, and maintenance of roads, railroads, streets and pavements; strength of building materials, masonry construction, foundations on land and in water, analytic and graphic investigations of stresses in girders, roofs, and bridges, and the design of these structures; the principles of hydraulics as applied to dams, reservoirs, canals, municipal water works, and the development of water power.

The course is intended to prepare young men for entrance upon professional
practice in some of the many branches of civil engineering, and also to meet the needs of those who having been engaged in engineering work without a course of instruction, desire to equip themselves for more successful competition with those who have had such instruction.

G. D. CURTIS.
REALIZING the importance and growing magnitude of the cotton manufacturing industry of the South, the Board of Trustees voiced the sentiments of the citizens of South Carolina by deciding to establish, in 1898, the Textile Department of Clemson College. This was made possible by utilizing fifteen thousand dollars of the annual appropriation and by donations of equipment from numerous builders of cotton mill machinery. The equipment did not long meet the requirements of necessary instruction to the aspiring numbers who wished to avail themselves of this course; so in 1900 it was found necessary to increase the size of the building and to install therein more machinery. Since that time new and improved machinery has been constantly added until now the equipment is not surpassed by any school in this country.

The building was constructed along the plan of a modern cotton mill, being a two story brick structure with basement, and equipped with automatic fire
sprinklers and a humidifying system. The first floor is occupied by recitation rooms, carding and spinning rooms, and office. On the second floor are the weaving and designing departments, recitation rooms and museum. The basement contains the dyeing, bleaching and mercerizing machinery, and the organic chemical laboratory. On the first floor is also arranged a display and reading room which is used for exhibiting the work done by the students, and in which are kept numerous periodicals pertaining to the industry.

The equipment is composed of machines and apparatus obtained from the leading manufacturers of these articles, and includes all that is necessary for the manufacture of numerous textile articles from the raw material to the finished product. The machinery, though, was selected for educational purposes and not for manufacturing. This facilitates more changing in the machines themselves, and gives the student a better chance to familiarize himself with a wide range of products. The machinery of each room is operated by a separate electric motor. Parts of this equipment have been bought direct, while others have been donated, or partly donated by the manufacturer. The value of the equipment is now estimated at about seventy-five thousand dollars.

Instruction is given by means of lectures, text books, and by practical application of the different subjects. This includes instruction in carding, spinning, weaving, designing, organic chemistry, dyeing, cloth analysis, Jacquard designing and mill construction. Besides this the student pursues the same academic work as in the other courses of the college; and, until the Junior year, has the regular work as laid down for the Mechanical Course. Thus besides acquiring a thorough knowledge of Textiles he has a good general education leading to the degree of Bachelor of Science.

SPINNING AND CARDING MACHINES
Academic Department

IT IS in the Academic Department that the student builds the foundation upon which rests the studies he pursues in the other courses. The student receives a thorough course of instruction in Mathematics, English, History, Political Economy, German and French. Though the two latter subjects have only been added recently, they are proving very popular, especially with the Juniors and Seniors.

The requirements in Mathematics are high, as those who take the Electrical and Civil Engineering Courses have to meet them by the end of the Junior year, so as to be ready for the engineering work in the Senior year.

The course in English is very thorough. The student is first taught the principles of rhetoric and composition; he then pursues the study of American and English literature. In the Senior year instruction is given in literary criticism. A somewhat full course in Shakespeare is furnished, and several plays are read in class.

The course in the History Department includes history of the United States, South Carolina history, general history, commercial geography, and political
economy. The history of the South and of South Carolina receive special attention, for "A people which takes no pride in the noble achievements of a remote ancestry will never achieve anything worthy to be remembered by remote descendants."

Prof. Brodie, assisted by Profs. Martin, Houston, Hunter and Johnstone, has charge of the Mathematical Department. Prof. Furman is the head of the English Department, and is one of the two professors who have been connected with the college from the time of its founding. He is assisted by Profs. Daniel, Keitt, Bryan, Bradley and Holmes. Prof. Morrison, who has been with the college since its doors first opened, has charge of the Department of History and Political Economy.

W. B. Aull.
Sept. 10. Officers return.
Sept. 11. Other Cadets and Rats return.
Sept. 15. Physical examination of Rats. Epidemic of ancestors prevalent.
Sept. 16. Campus green with Rats.
Sept. 17. Plenge speaks without being spoken to.
Sept. 18. Rat calls at commandant’s office for washpan full of countersigns to grease his gun with.
Sept. 19. Adjutant gets excited and details as officer of the day Lieutenant Captain Cadet W. A.
Sept. 20. Rat offers Dr. Sloan fifty cents for his share on cigars.
Sept. 21. Seniors are still busy trying to bleach their blue tickets.
Sept. 22. Adjutant announces that Senior Electricians can be secured at cadet exchange.
Sept. 23. Preaching. “Fritz” tries to crease his derby.
Sept. 24. Nearly all of the Seniors go to classes; a few lame ducks still under treatment.
Sept. 25. Rat goes to Prof. Gantt for bucket of blast.
Sept. 27. Nothing doing.
Sept. 28. Heyward gets Prof. Doggett’s express package.
Sept. 29. Seniors go to show at Seneca—“Gov.” fights “Booze.”
Sept. 30. Preaching, as usual.
Oct. 3. Varsity and Scrubs have first scrimmage.
Oct. 4. Entertainment in chapel.
Oct. 5. German Club Dance.
Oct. 6. Rigid inspection by the Majors.
Oct. 7. Preaching in chapel.
Oct. 8. Prof. Morrison leads chapel exercises, reads the Sunday School lesson for next Sunday.
Oct. 9. “Daddy” is very serious, doesn’t crack a single joke.
Oct. 11. “Steve” brings pitcher of water.
Oct. 12. Hospital corps has informal meeting on parade ground.
Oct. 15. Beef steak is very, very rare.
Oct. 16. “Fritz” pulls his hat to dummy in show window.
Oct. 18. “Mike” has trouble with corporation.
Oct. 19. Dr. Mell tries to abolish faculty races.
Oct. 21. Same as fourteenth.

80
Oct. 25. Great excitement prevails in barracks on account of new resolutions concerning re-exams.
Oct. 27. Show in chapel.
Oct. 29. Hospital Corps receives manual of first aid to the injured.
Oct. 30. Prof. Earle goes to Greenville to buy his fall hat.
Oct. 31. "Tubby" has nightmare in class room.
Nov. 1. Clinkscale's new bus arrives.
Nov. 2. Team leaves for Davidson.
Nov. 3. Clemson, o; Davidson, o.
Nov. 4. Fight behind barracks.
Nov. 5. "Bear" takes annual shave.
Nov. 6. Rains (no wonder).
Nov. 7.
Nov. 8. "Steve" gets invitation to act as pallbearer at friend's wedding.
Nov. 9. Senior Dancing Club gives dance in Agricultural Hall.
Nov. 10. Clemson, 6; Auburn, 4.
Nov. 11. Preaching.
Nov. 15. Col. Clay astonished at appearance of Seniors.
Nov. 16. Senior privates lose privileges, because they persist in acting like boys.
Nov. 17. Clemson, 17; U. of Tennessee, o.
Nov. 18. Same as eleventh.
Nov. 19. "Booze" gets all night light, with caution not to burn same.
Nov. 20. "Ichabod" is seen on campus with coat buttoned.
Nov. 21. Seniors receive compliments and privileges.
Nov. 22. Seniors get "horsed" and lose privileges.
Nov. 23. Nothing doing.
Nov. 25. Team takes supper at Central.
Nov. 27. Seniors become men, and are given back their privileges.
Nov. 28. Seniors and team leave for Atlanta.
Nov. 29. Clemson, 10; Tech, o. Big day in Atlanta. Big day at Clemson.
College spirits run high.
Nov. 30. Team arrives, and is met by corps.
Dec. 1. Discussion of the Atlanta trip.
Dec. 2. Preaching.
Dec. 3. Seniors delighted over the fact that they will receive new lockers soon.
Dec. 4. Photographer arrives.
Dec. 7. Entertainment in chapel.
Dec. 9. Boys are dead broke.
Dec. 10. Dr. Calhoun introduces new and convenient method of cooking fish.
Dec. 12. "Hick" moves he can't write nothing.
Dec. 14. No sign of rain but boys are preparing for "mud."
Dec. 16. Last sermon before Christmas.
Dec. 17. Examinations.
Dec. 18. Same.
Dec. 19. Seniors stand "Daddy."
Dec. 20. Exams.
Dec. 21. Some of the boys leave for home.
Dec. 22. Remainder of the boys leave for home.
Dec. 23. All go to church at home.
Dec. 30. Read in "The State" that the opening of school will be postponed.
Jan. 1. Receive orders to report back to school on the ninth.
Jan. 10. "Rastus" has musical down to the store.
Jan. 11. Crescent Comedy Co. shows.
Jan. 15. Photographer arrives to re-take pictures.
Jan. 16. Practice for class football begins.
Jan. 18. Street is improved from Textile building to store.
Jan. 20. Lecture in Y. M. C. A. Hall.
Jan. 22. "Paul" awnts to know the weight of a pound of dry steam.

82
Jan. 23. Prof. House meets his classes.
Jan. 25. Big rain. Seniors fear that the big dinner will be missed.
Jan. 27. Prof. Gardner goes to Greenville.
Jan. 28. Wrestling match at hotel; Prof. Hunter throws Prof. Henry three straights.
Jan. 29. Plenge gets "horsed."
Jan. 30. Dwight sleeps through breakfast.
Jan. 31. Col. Clay has Seniors to meet in his office, to assign lesson in Military Science.
Feb. 1. Annual goes to press.

History of Class of 1908

A FEELING of unworthiness overtakes me when I endeavor to comply with the wishes of my fellow class-men, and record the deeds and happenings of the noble Class of 1908. But, obedience is the first duty of a good soldier.

We historians agree that the year '04 was made more illustrious when the Class of '08 was ushered upon “Clemson's Field of Learning.” Never before in the annals of history has so determined a band joined forces to seek for that grand prize, knowledge.

The State Legislature, with a foresight of our true greatness, caused one hundred scholarships to be competed for that year. Those who were fortunate enough to win one of these, have realized their true worth and have worked hard to hold them.

In our Freshman year, a page was entered in our class history recording the deplorable deaths of our fellow class-men, W. W. Coulette, J. T. Weston and
J. C. Gossett. The class and the whole corps was made to sorrow on these sad occasions. But we recognized the hand of God and said, “His will be done.”

Of our 252 Freshmen, only 125 returned as Sophomores. We came back with a full recognition of our importance, and with the purpose of taking advantage of that immunity that we had dreamed of when the wood was gently, gently falling in our “rat days.” It was this year that we raised one hundred dollars and presented it to the foot ball team, to help buy their “implements of warfare.” We were also the ’06 champions in class foot ball.

In the summer following, we lost our friend and comrade, Bruce L. Alsbrook, a man who was admired by all. At the opening of the season we were again made to grieve at the untimely death of our beloved comrade, Joseph C. Reaves. The circumstances and shock of his death caused our grief to be more deeply embedded, and it was with sad hearts that the 90 Juniors took up their work.

Our history has been one of sorrows, but, now at the close of our Junior year we all trust that we may reach the Senior “ten-yard line,” and then go over for a glorious “touch down.”

J. D. Graham, Historian.

SOPHOMORE CLASS
History of the Class of 1909

At the beginning of our Freshman year, there were 198 boys who launched their untried barks on an unknown sea where, not our physical abilities were to be tested, but where our mental activities were to be cultivated, and our minds deepened and broadened. In this sea, there were dangerous rocks covered with the wreckage of bad record, on which many of the barks of the students who had sailed before us had split. As a result of this forewarning, the majority of our class became aware of this fact and tried to steer clear of all these obstacles; while, on the other hand, there were some who, seemingly, forgot about these treacherous rocks of "Trig," "Math," "Physics," and "Chemistry" when they had reached the sea of Sophomore, and, consequently, they were stranded on the rocks of examination.

At the beginning of the current year, our fleet was increased by a few additional sails from the class of '08, who, unfortunately, as a few of ours have done, had failed to struggle with the storm of study, and weather the troubled waters of examination shoals. At the end of the first year's cruise, there were 117 under the pilotage of Boyce Wolff, whose proud colors had not been engulfed by the appalling whirlpools of the turbulent waters of the examination port.

It has been said that whenever a Freshman lays down his work in June to resume it in September as a Sophomore, he then thinks that he is wiser than any member of the other classes; but I hardly know whether this is true or not with us. The chasm between where we started in Fresh. and the goal we long to reach is still widening; and the more we learn, the less we seem to know, because of the recognition of ever increasing circles of thought and knowledge, which, the higher we rise, appear to grow larger and more difficult to encompass.

The Sophomore Class bids fair to be one among the most notable in the
history of the college. We have a mighty interest in the welfare of our college, and in the achievement of the welfare, we are bearing no ignorable share. We are trying to cultivate the broad and generous sympathy which throbs in unison with all humanity, feels for every man, and which is interested in everything that concerns the common brotherhood of the entire corps.

In the grand orchestra of our college glorification, from an athletic standpoint, our class is playing no discordant trombone. No class has a better representation on the "Scrub" and "Varsity" foot ball teams, who have been and are making championship names for Clemson College, both at home and abroad, than has ours. On this team we are represented by McLaurin, Gaston, Britt, Clark and Coles, whose strong defense on the line when they began to buck caused a sickly silence to fall upon all the rooters of our foes. Not only is our class well represented in the "Varsity" eleven, but our record is also good on the track team. Ballew, who proved to be the man that could make the greatest number of tracks in the shortest time, won the laurel for the hundred-yard dash, while Harris, who comes out in the long run, took the prize for the half-mile race. The broadest jump was made by a Sophomore, and the mile relay race was also won by the boys of our class. In the race for the greatest eater, Fleming, who is large and tall in stature, greatly distinguished himself and won the name—"The Cracker Man," as well as plenty of cigars to smoke. Though none of the members of our class have, as yet, won medals from the Literary Societies, still we are taking an active interest in the development of that phase in college life, and hope to be heard from in the future.

In our Freshman year, we were divided into Agricultural and Mechanical sections only; but when we reached the Sophomore class, there were smaller divisions made, viz.: the Agricultural, Textile, Metallurgical, Civil, Electrical, and Mechanical sections. Those who were fond of the study of plants and animals, chose the Agricultural Course; while those who were ambitious to become engineers, chose either the Mechanical, the Electrical, the Civil, or the Metallurgical course. Though we are divided into these sections apart from each other in our class room and laboratories, nevertheless, as I have elsewhere stated, we are all striving onward together for places of larger promise and greater usefulness.

And now as we stand at the eventide of our second college year, permit me to say that never were any higher and more gratifying prospects spread before us; and we trust that this vista shall not be clouded even with a transient shade.

HERE we are! The happy Freshmen who are to compose the noble Class of 1910. Of this large number, only a few had the pleasure of going through “Prep.” After landing at Clemson in the full bloom of “rathood,” our first duty was to find our way to the President’s office and matriculate, and then to be assigned to our rooms by the commandant. Our college career for the first few weeks was exciting. It brought to memory our childhood days, when we had to bring water, sweep, whistle, dance and do all kinds of tricks that were a pleasure; but in this case they only proved to be a pleasure for the “old boys.” Entrance examinations and longings for “home, sweet home” have decreased the number of the class to one hundred and ninety-four; but undoubtedly out of this number we have many hidden geniuses who will some day prove their worth as agriculturists, mechanics, electricians, civil engineers, orators and various other men of note.

Up to the present our college work has been very satisfactory. A smaller percentage of the boys failed on the first term examinations than in the class
of last year, which is a record which we are proud of; and we trust it will be
maintained until the roll call of 1910. May we all then be able to answer "here."
Although the goal is far away and very difficult to reach, the aim of each of
us is to strive to cross the line when the whistle sounds "time up."

A great responsibility is resting on each Freshman in college, and it is his
duty to prepare himself, as the days rapidly pass by, to fill the vacancies of those
who are now keeping up the spirit of the college. These places should be filled
willingly and bravely, both for maintainence of our self respect, and for the
love that we bear for Clemson, and those who have crossed the goal. Let us,
united, strive to hold the reputation the college now has, and put forth extra
effort for its better development in college spirit. At our first class meeting,
held last September, we chose for our president R. H. McFadden. He has ably
represented us on the foot ball field, and has ever been on the alert to promote
the class spirit of our class. Our other officers are, T. L. Marion, Vice-President:
R. P. Henderson, Secretary and Treasurer, and M. M. Roddey, Poet. We are
small factors at present, but with proper aims and ambitions we will make the
four "touch downs," and in 1910 will look back with pride upon the achieve-
ments made during our college days.

PRESIDENTS, PALMETTO SOCIETY
Y. M. C. A. OFFICERS

President

General Secretary

Treasurer

Vice-President

Secretary
The Young Men’s Christian Association was founded by a dry goods clerk, George Williams, in London, June 6, 1844, as a result of religious effort among his companions. From here the movement has spread all over the world, to all classes of men, and to all departments of life. The organizations are societies of young men, composed of an active, controlling membership identified with some one of the evangelical churches, and a more numerous associate membership not yet connected with any church. The association seeks to promote the physical, social, mental, and spiritual welfare of its members.

The first associations on this continent were organized in December, 1851, at Montreal and Boston, both as a result of information received regarding the societies organized seven years earlier by Williams, in London, England. Forty-more associations were organized within three years. The first international convention was held at Buffalo, N. Y., June 7, 1854, at which a confederation was formed, with a central committee and an annual convention, which lasted until the war between the states. The war greatly diminished the membership; and the organizations that survived worked chiefly among the soldiers in the field. Both the South and the North helped their armies greatly through the means of their respective associations. After the war the association entered upon a period of growth; and has been advancing rapidly ever since.

The organizations, generally, are as follows: The local association has absolute power of self-government, except, that to affiliate with the international committee, there must be constitutional provisions restricting active (voting and office-holding) membership to men in communion with some evangelical church.
The membership consists of two classes; namely, active, who carry most of the responsibility, and associate, young men of good moral character. The executive officer is a salaried secretary, whose chief responsibility is to supervise, organize, and administer. Most associations have a specially constructed building with reception room, offices, reading room, meeting and recreative rooms, educational class-rooms, and quarters for boys’ department. The first well equipped Y. M. C. A. gymnasium was opened in New York in 1869. The departments are: religious, which consists of Bible and worker’s training classes, evangelistic and devotional meetings, work in behalf of personal purity, and a special, emphasized personal work; social, which consists of a pleasant resort with companionable supervision, music, recreative grounds, social gatherings and entertainments.

The International Committee, which is composed of forty-five members, who reside at different parts of the continent, is incorporated; and its headquarters and working quorum have been located in New York since 1866. Its employed force on the home field, which has grown steadily from one agent in 1868, at present consists of forty-four secretaries. It has also sixty-four secretaries in foreign fields. Twenty-six states and provincial conventions were held in 1902, attended by 3989 representatives from 935 associations.

The first student associations in this country were organized in the University of Michigan and the University of Virginia in 1858. In 1877 the thirty scattered societies became united into an inter-collegiate movement, for which a secretary has been secured. A body of literature has been created, and “The Inter-Collegiate” is published monthly.

There are at present 763 student associations among the universities and colleges of North America. In institutions where associations are, there are 150,000 students; and, out of this number, there are 45,000 members of Young Men’s Christian Associations. As a result of this movement, there were 40,000 students won to Christ, there are 4,000 students studying for the ministry, there are 600 student volunteers, and there are over 33,000 students enlisted in private and voluntary Bible study, which has given a strong incentive to Bible study in the curriculum. With the aid of the Student Volunteer Movement for Foreign Missions, which is an outgrowth of the student associations, mission study classes have been formed, with an annual enrollment of 5,000; and over 2,000 students, of whom about two-thirds are men, and have already become missionaries.

Summer conferences for the promotion of the religious life of students, commencing in 1886, have spread from Northfield to all sections of these United States, and to so many other lands that in 1895 these associations were federated by organization under American leadership into the World’s Student Conference Federation, made up of eleven national and industrial members.

The Clemson College Young Men’s Christian Association was organized in
1894, through the efforts of Mr. F. S. Brockman, then State Secretary, but now a missionary to China, and Prof. F. P. Harrison, now of Davidson College. Since the beginning of the association it has been doing a good work, and has been growing steadily; within the last two or three years it has made rapid strides in the upward direction; so that now, as never before, the student body is beginning to realize the true purpose and aim of the association. The work of the association has enlarged very much along all lines, and it is fast assuming that part of college life, which should be its privilege and duty to perform.
The New Heat, Light and Power Plant

As the result of an investigation into the advisability of constructing a central heating and power station, thereby procuring greater efficiency of operation and also the necessary increase of available power, an appropriation for the installing of such a plant was made. The plans submitted by Prof. W. M. Riggs, Supt. of Department of Heat, Light and Power, were adopted, and the construction ordered to be commenced at once.

The design and equipment of the plant contemplates the carrying of a rather complex load, the heating and lighting of the college buildings and the furnishing of steam and electric power to the various shops and laboratories.

The building, which is situated to the rear of the New Barracks, is a single story structure, 84½ feet long by 40 feet wide, built of granite faced cement blocks backed by selected red brick, with finished mortar joints. The roof is of truss construction, with metal shingles. The building contains five rooms—the boiler room, the engine room, and three smaller rooms, one for oil, another for pumps and feed-water heaters, and the third for bath. The boiler room is finished on the inside with red brick walls, cement floor, and neatly painted trusses and
ceiling. The engine room presents an attractive and artistic appearance with its tiled floor, white enameled wainscoating, white plastered walls and white enameled trusses and ceiling.

The chimney is of artistic design. It stands 100 feet above its foundation. The stack, above its first 25 feet, is built of special white radial brick.

The boiler room equipment will consist of two 150 horse power Stirling water tube boilers, and two 100 horse power Lombard horizontal return tubular boilers, the first set operating at a normal pressure of 130 pounds; the latter, at 80 pounds. These boilers are of such size as to anticipate all power and heating needs for many years to come.

The steam heating of the Mechanical, Chemical, and Electrical buildings, in addition to the Old and the New Barracks, and Barracks No. 2, will be accomplished by means of the Webster system, exhaust steam from engines being used for the barracks heating. Steam at 130 pounds pressure also will be furnished to the Mechanical and Textile buildings for power purposes.

The engine room equipment will consist of a 122 horse power Harrisburg engine direct connected to a 75 K. W. General Electric three wire direct current generator. This unit will be operated for the Edison three wire system of distribution. The other engine, a 114 horse power Harrisburg engine, will be direct connected to a 70 K. W., three phase, 2300 volt, revolving field alternator.

In addition to these engines and generators, a 75 K. W. rotary converter will be installed, making it possible to obtain both alternating and direct current from either unit. This will make it possible to adapt either machine to the various kinds of loads met within the college plant. In other words, each machine will become an emergency machine. In truth, this equipment will insure a most flexible power system.

There will be six switchboard panels, three A. C. and three D. C. The alternating current group, made of black enameled slate, will consist of a generator, a feeder, and a rotary panel. The direct current three, will consist of a three wire generator, a three wire feeder, and a three wire direct current rotary converter panel. These will be made of blue Vermont marble. The switchboard equipment will be complete, up-to-date, and standard.

Containing, as it does, most improved apparatus, and combining all of the principles of both direct and alternating current work, the plant, in addition to meeting the many and varied demands of a college plant, offers special opportunities of instruction for engineering students; and in its completed state will probably be one of the most unique and up-to-date plants in the South.

A Rat's General Orders

My general orders are:

To take charge of this post with no military intentions whatever.

To observe every officer in sight or hearing; so that no innocent visitor be caught.

To "beat" matches, cigarette papers, and tobacco for old boys on my post; and to carry books and messages from one room to another with as little delay as possible.

To repeat no call until it has been made three times—this is to make the sentinel doing the calling cultivate the use of choice and beautiful language.

To quit my post at any time an old boy with a paddle orders me to do so.

To receive, transmit, and obey all orders from everybody, and to yell "fire!" in case the president of the college, commandant of cadets, or a member of the board of trustees comes on my post.

In case an officer is inspecting, to tap on those doors where there is visiting; or, if the officer has not arrived on my post, to open such doors and say gentlemen, "Skiddoo."

To encourage loud talking, whistling, or other diversions on my post.

In any case not covered by my instructions to sing "To H—with that Flea" until something more interesting occurs.

To salute no one but Dr. Sloan—he carries a stick.

In case of fire, to throw kerosene on it and "let her flicker."

"Shorty"—"Nuff Said"
PUNS
Puns

Brown:—“Professor, I am not prepared to recite to-day. The rats got into my room last night and ate up my book.”
Prof. Furman:—“Well I suppose the rats have a better taste for good literature than you Seniors.”
Class:—Haw! Haw! Haw!
“Booze”:—“I am going to specialize in hydraulics.”
R. G.:—“You had better familiarize yourself with the shower bath first.”
Barkesdale at German Club Meeting:—“I move that the table be motioned.”
“I am for prohibition. Whit. What are you for?” Bystanders, “He’s forgotten.”
Britt wants to know if you can draw a Logarithmic curve with a slide rule.
Louis:—“Who likes cheese?”
Chip:—“I used to when I was a rat.”

Mess Hall Remarks

A lock of hair may cause your heart
To jump to your throat with a flutter;
But it’s not the heart that seeks the throat
If the hair is in the butter!

“Two bites at a cherry” is not nearly so delicate as twelve hungry boys at
two Irish potatoes.
“What kind of beef is this?”
“Round steak.”
“Must be the stake the old boy was tied to!”
“Who the dickens put this piece of tomato skin in the water?”
“That’s not water: it’s soup, you idiot!”
“Do you know how our coffee is sweetened in the kitchen?”
“Yes. They let a fly light on the outside of the sugar barrel and then he
is made to fly over the coffee pot.”

Hurrah! Force on table to-night. Must be going to give us biscuits to-
morrow.
“Whoever draws our coffee is a deuced poor artist!”
“Our coffee is not drawn; it is done in water colors.”
This is mutton. Yes: judging from the energy wasted on it, it must have been
an hydraulic ram.

C. ’07.
Adventures of a Senior

Farmer Jones hired Bristow to send his Carter and White Mule over to his Woods to help haul a load of Wood to Dalton, as his own Brown mule Buck was Slo an' somewhat of a Runt, and therefore could not pull a heavy load. The cart was sent and loaded, and was making good time over the excellent Stone Rhodes which extended all the way except for the Boggs at the banks of the river. When they reached this place, the cart went down to the axle. They beat the old mule until the whip was worn to a Stub; but it had no effect, for his hide was as tough as Whit-leather. They sent for a Shingler, whose Schuck was nearby, to bring his adz and Hugh a tree for a prize pole. They began to prize, but the tree was Britt le and broke, striking one of the men such a blow that it caused him to Keel over. After giving the wounded man a dose of Chloroform, he immediately Hughes another; but this, too, was limber and a Heavy Weight caused it to Bow- en the middle.

Night had now caught them with nothing accomplished. It was a pretty Mooney night, but the Howl of a Wolf nearby made the situation unpleasant. About this time a Taylor named Kellar with legs like Pot Hooks and with a pair of red eyes Perrin' out of their deep-set orbits, came staggering up. In one hand he had a Levou, and in the other a bottle of Booze which he bought from the di Spencer at Walthall. He sat down and began to Reid a Bill for some Regals, but the Old Man had to Hick up so often, he thought it best for all to take a drink to the health of the wounded man. He then told them of a friend of his, named Fritz, living over at old Judge Clark's, who could pull more than both of the other mules, and said he always Lykes to help people in a Tite place; so they all started out to find this biped of such enormous strength. On entering the yard in search of this helper, one of the men tumbled in a Tub by the well, while one of the others ran over a coop in which there were a “Seoby” Duck and a Guinea fowl.

The cries of the fowls and the rattling of dishes by the Tabby cats, which in their fright had sought refuge on the dining table, suddenly woke one of the inmates of the house who fired into the crowd from a Garret window, and they all had to Skip.

COACH 1906-7
Our 1906 Baseball Record

With the football season ended the general topic of conversation (as naturally it should be), was, what is the prospect for a baseball team? Everyone knew that with only three of last season’s Varsity men back it was a very hard matter to put out a very strong, and at the same time a winning team; yet, having the “Tiger determination” (as it may fittingly be called) the boys never gave up hope, but, instead went steadily to work with renewed determination to put out a strong aggregation of ball players. Early in the season, a mass meeting of the whole corps was called, at which an earnest request was made of every cadet who even had a notion that he could play ball to come out. This request was heartily responded to; and in a very short time there was a large number of candidates ready to compete for the various vacancies.

In order to get the men in good condition for out-door practice, the season’s work was begun with a month’s light practice in the gymnasium. Coach McMakin, whose ability had been previously proved to the “Tigers,” was greeted with delight by every member of the corps. In a little while Coach had the team selected; and his men rounded out in good condition.

Unfortunately for the “Tigers” the first game was away from home; this being played against our friendly rivals, the followers of Heisman. The “Techites” proved to be a little superior in the knowledge of the game at the opening of the season and consequently we suffered defeat at their hands, although the “Tigers” held their opponents down to a very close score.

At the end of another week we were to fight two of the hardest battles of the season, a double header with the University of Georgia at Athens. The second, as the first game resulted in a defeat for the “Tigers.”

Next came the game with Furman on our campus. Until the seventh inning it seemed an easy victory for Clemson, but when the final inning came, the score book showed Furman ahead.

This series of defeats was enough to dishearten any team, especially a new one, but instead it seemed to make the “Tigers” play only the harder, for it was the very next game that they put the Trinity aggregation “out of commission.” The “Tigers” showed a great deal of improvement in this game, especially in the batting line.

At the end of another week, we had suffered another defeat at the hands
of the strong team from Mercer. After this game came one with Wofford, in which the "Tigers" clearly outclassed their opponents at every stage of the game, and at the end the score stood nine to two in our favor. This, our second victory, seemed to counteract the previous defeats and put new life into the game as well as into the corps.

The next test was that with Furman at Greenwood. The team that day knocked the "invincible Lanford out of the box," and the game resulted in a score of 12 to 3 in favor of the "Tigers."

Out of seventeen games played, we won six, lost ten and tied one. While this is not up to the "Tiger" standard, nor nearly so good a record as Clemson's previous ones, yet it is by no means without credit to a new team.

OFFICERS OF TRACK TEAM

171
No longer do football and baseball occupy the entire attention of those interested in athletics at Clemson College as they formerly did. For during the past spring, a wonderful interest was developed in Track work. With success, there comes an ambition for more victories; and so it is in this branch of athletics at Clemson.

Until the spring of 1905, no one had thought of sending out a team to represent the college. Dr. F. H. H. Calhoun, a graduate of the University of Chicago, and a very fast track man, was the first one to conceive the idea. A challenge was accepted to meet the University of Georgia, at Athens, and E. R. McIver was elected captain, F. C. Wyse, manager, and Dr. Calhoun was elected to coach the team. A large number of recruits came out in response to the call for men, and work was begun early in the season. However, all of our efforts were in vain, our team being defeated by a healthy score, Clemson winning only three first places and five second.

This was discouraging to most of the student body, but it should be considered that it was our first attempt and against a team composed of experienced men. Dr. Calhoun, however, did not lose time in grieving over a past defeat, but when the spring of 1906 came, put the men out earlier, and put them through some preliminary gymnasiurn work, beginning out-door work as soon as the weather would permit. The team was reorganized with F. M. Furtick as captain,
Dr. Calhoun as coach, assisted by Profs. House and Nelson, and A. S. Heyward as manager. Manager Heyward succeeded in arranging a meet with the University of Georgia on May the 12th, at Clemson. This event was looked forward to with much eagerness by the corps, as it was to be the first Track meet ever held on the campus. The men in training went to work with renewed vigor, determined to win or make the Georgians work hard for the honors of the day. Dr. Calhoun secured a training table for the members of the team, and everything was done to put them in prime condition.

At last the eventful day arrived; the sun rose out of a cloudless sky, and everything portended a most glorious day of sport. The first event was started promptly at 2:30 p. m., and everyone held his breath as the starter fired his pistol in the air and cried, "Go!" For the running of the 100-yard dash, Warren, of Clemson, won first place in this event, and great was the joy of the Clemson "rooters." This seemed to inspire a feeling of confidence in the whole team, and all of them settled down to work with steadier nerves. Out of a total of twelve events, Clemson won eight first places. Johnson came out first in the 200-yard dash, Furtick first in low hurdles, Spratt first in high jump, Furtick first in pole vault and also in putting the shot. In the mile race Clemson entered only two men, Alford and Harris, and won both first and second places, Alford winning first, Harris second. The final score was 59 to 49 in Clemson's favor, and this gave us the championship of Georgia, Alabama, and South Carolina; for the Georgians had already defeated the leading teams of both of the former States.

The winning of this meet has placed Track Athletics on a firm footing; and Dr. Calhoun deserves much praise for his efforts in this direction, for had it not been for his unquenchable enthusiasm, no doubt this part of Athletics would have been relegated to its old place in the background after our first defeat in Athens on April 17th, 1905.

The team has been organized again for work this spring with the same officers, with the exception that A. B. Taylor has been elected business manager. Two meets have already been arranged for this spring, but both are to be held off of the campus. However, Manager Taylor hopes to secure one here later on. With most of last year's team back, and with one more year's experience we can not but hope for still better results in field sports.

The Proving of Brown

"NOW boys! altogether, nine 'rahs' for Brown! One, two, three————-".

The yell was given in a spirit which well bespoke the enthusiasm of the band of students gathered before the main building of one of the large educational institutions of the South. Why should it not! Brown, captain of the victorious football team of the previous season—Brown, the straight-forward, most popular man of the college, was to leave them. And if by their cheers and a hearty send-off they could express something of their appreciation of him, so much the better. Brown could not answer. As he turned from his college mates, his eyes were suspiciously moist; and many of them realized for the first time what it meant to him to leave the place which had been all but home for the past three years.

From his boyhood days, Brown's ambition had been to reach the, to him, almost inaccessible position of civil engineer. To this end he had worked faithfully during his college days. But now everything seemed blank. Within the past week his father had died, and Brown, the only member of the family which had been left to his father, found himself without means of longer attending school. The vast fortune, supposedly safe in the hands of his father, had disappeared with the proverbial instability of riches. Brown had found the death of his father, and the necessity of leaving college enough to bear; but that was not to be all. The previous evening, he had called on the one to whom he had plighted his faith, with the intention of bidding her farewell. Scarcely had she recognized him. Riches were her choice; and no sooner had she learned of his misfortune than all affection for him vanished.

Desperate as Brown had now become, he naturally felt that there was little in life worth living for. To leave his old friends and attachments; to bury himself in some strange, little known place far from his former home, was his great desire. Where that place of retreat should be, he little cared.

College left behind, Brown at length made his way to one of the large lumber camps of the Canadian woods. Owing to the scarcity of labor he obtained a position, in spite of the foreman's objection to employing one who so unmistakably showed college-bred manners and ideals. But Brown soon took well with the men. His unfailing good humor, his willingness to help out wherever needed, and perhaps most of all the great power of body which he had gained on the football field, served to make him one of the best liked "boys" of the camp. Brown found
his work far from monotonous; in fact, the days spent with his well-trained four horse team, hauling logs to the river, passed by very rapidly, and almost before he realized the fact, winter was nearly spent.

"Brown," said the foreman one day, "I want you to go down along the river to L——, where the company's putting up the new mill, and take this note to Mr. Clarkson, and bring back what he tells you to. Hurry, now!" The following day Brown, having delivered the message, started "to inspect the saw mill." While wandering through one of the buildings, he came upon a piece of work which, so far, the constructors had been unable to accomplish. As a result of Brown's technical training, he was able to solve the problem for them, with the result that he was transferred from the lumber camp to the mill, at greatly improved wages and general conditions. Brown slowly worked his way upward, and began to attract some attention from his employers; but the great opportunity—the crucial test of his judgment and ability, was yet to come.

By spring, the great saw mill was ready to begin work as soon as the ice should break up, in order that logs might be floated down the river from the woods to the north and west. Busy indeed was the scene around the mill, as well as in the camp. A village had already sprung up, and prosperity—the beneficial result of labor, was to be found on every hand. Early one forenoon, a week after the mill began work, logs ceased entirely to come down stream; and a few hours later came news of a great dam of timber and ice which had formed on the shoals in the narrow gorge a few miles above. Great was the consternation throughout the mill community; for the fact was plain to everyone, that should the dam not be broken in time, the immense amount of water, ice and logs which would accumulate would, when the barrier finally gave way, rush down upon the valley below with irresistible force. Mr. Clarkson, the superintendent, thoroughly realizing the damage which the company would sustain, not to mention the loss of life and property liable to result further down the river, made every attempt to have the dam broken up. Dynamite was resorted to, but without success. The huge wall of ice and timber was not to be so easily broken up.

Several lives had nearly been lost, and the lumbermen were ready to give up in despair, when Brown, almost exhausted from his long race up the river, appeared on the scene. His eye, trained by his work while at college, and with his genius for solving engineering problems, took in at glance the very rock in the center of the stream, on which the first few logs were caught in a manner capable of holding the entire obstruction in place. On either side of the rock the two wings of the dam stretched up stream and across to the opposite banks, forming a natural wedge. Could he reach this place? Water, and occasional logs and cakes of ice was pouring over the dam. In order to break the pack, one must, at great personal risk, place the charge of dynamite within the very walls of the dam.
Brown hesitated not a second. His pockets filled with cartridges and fuses, he carefully worked his way toward the center of the stream. Would he ever gain this point? Many spectators fairly held their breath, and grizzled lumbermen, unaccustomed to giving way to emotion, were heard to send forth half-muttered prayers, or curses, as best suited their natures.

"May Hivin kapc him," exclaimed Murphy O'Brien, with chattering teeth, "and if one uv thim infernal cartridges happens to explode, the gud Lord only knows where they'll find the pieces on judgment day. Sure, an' the fishes i'll niver find 'em all before thin."

Well aware of the danger from the cartridges, Brown pushed on. That massive but agile form had more than once, by great leaps and turns, evaded his opponents on the gridiron, and carried the ball safe through to the goal. Well indeed did his former training now serve him. At times, it seemed that Brown must certainly be crushed by flying logs and cakes of ice. Once, his foot slipped, and a giant timber nearly rolled over him; but in a moment he was again pressing on, this time, his left arm hanging limp by his side. Finally, the cartridge was placed and the fuse lighted. Then began the race for safety, before the mass should sweep him to destruction. With superhuman strength, Brown dashed from rock to rock; but he was too late. With a dull roar, the cartridge exploded, sending a mass of logs and splinters far out over the stream. The great dam trembled, swerved and slid into the channel below. Brown gained the top of the seething mass, but was almost immediately drawn under. At length he re-appeared, and cheer upon cheer rang out from the shore as he was seen bravely making his way toward safety. The onlookers were again disappointed. Before a line or other aid could be sent to him, Brown sunk, not to reappear.

The following day, Perrault Demarx, a Canadian trapper, was to be seen drawing toward the boarding house of the mill community, a hastily improvised sled, apparently loaded with furs.

"Hello, Perrault," cried one of the loungers, as the trapper drew up, "how much'll ye take fur yer load? How many pelts yer got?"

"Pelts be hanged," furiously ejaculated Perrault, "no sich good luck. I got a man. Him purty nigh dead, too. And, by gaar! heem one beeg load. Golly but dat man am a beeg one." Perrault, while setting his traps the night before, had found Brown lying in an unconscious condition, upon a rock projecting from the bed of the stream. Brown was taken to Perrault's hut, and well cared for during the night.

A week later, Brown, having recovered from his injuries, which were not serious, was summoned to the office of Mr. Clarkson. As a matter of fact, our friend was warmly complimented upon his bravery and skill in turning aside the danger which menaced the entire valley. "Young man," said Mr. Clarkson, finally, "will
you tell me how you ever found the weak spot of that dam, and succeeded in so completely breaking it up."

"Oh, I just found it by looking carefully," was the modest answer. With some encouragement from his employer, Brown at length confided to him his hopes and ambitions, and the experiences through which he had passed during the last few months.

Mr. Clarkson was strangely attracted to Brown, owing both to Brown's story, and to his general appearance. After some further questioning, a proposition was made to our young friend, which would give him the opportunity of again taking up his course of study. Two years later, Brown, on a certain commencement day in June, received from one of the largest institutions of this country the long looked for degree of "C. E."

Retrospective Before the Fact

I was sitting by my fire idly dreaming, when some intuition told me that a loving face was peering over my shoulder. Glancing up, I saw that my wife had entered, and was holding in her hand the latest issue of "The Tiger," dated October 14, 1940. And as I eagerly glanced through its columns, my eye fell upon the name of the business manager, A. B. Taylor, Jr. Immediately a train of reminiscent thought was started, the trend of which was the accomplishments of my old classmates.

I recalled at once the greatest agricultural paper of the South, owned and edited by W. B. Aull, whose contributions to science had made him and his paper world famous. Closely associated with him was Sloan, the discoverer of Sloanogen, the magic chemical which surpassed radium in its wonderful powers. Brown is manager of the games at Coney Island, and among his heaviest plungers are Boggs and Schacht, who have become famous electricians in New York. "Si" Bond, after a long and successful career as a pitcher in the National League, has become a professional umpire. Bissel, Barksdale, Bristow, and Wylie are in the same town, and are the heads of the Inter-Racial League. Curtis married an English title, and is now an up-to-date "Beau Brummel." Dwight has set up a paper, and through his masterly controversial editorials, put the Columbia "State" out of business. Easterling became famous through the electrical appliance, which makes the voice of a duck as harmonious as that of a nightingale. It was with a shock that I remembered that Carter was still enjoying single bliss, and that he was running for Congress on the Republican ticket. His opponent, Peurifoy, the author of the child labor bill, was up for re-election on the Socialist ticket. Harris is running a hotel at Walhalla, S. C., and Folk is his head waiter. Stephenson has grown old in the management of the Crescent Comedy Company, but his leading comedian, A. L. Campbell, still makes the galleries roar with his witticisms. Hicklin holds the chair of dead languages at Clemson University. Moore revolutionized the dairy industry in South Carolina, and since the death of John Michels, is counted the highest authority on dairying. Quattlebaum and Crawford have long since devoted themselves to missionary work in the South Sea Islands. Tears came to my eyes when I remembered that McLendon, with his brilliant mind, had risen no higher than a special policeman at Timmonsville. Like him, Furtick had rested on his college laurels, and had contented himself
with a lowly smithy at Bethel. Bailey entered politics, and is still trying to re-instate the State Dispensary. W. W. Wannamaker, became poet-laureate to the Principality of Cuba, and C. W. Wannamaker is field agent for the poet-laureate’s books. Sears, Roebuck & Co. have able representatives in Banks and Britt. Great light has been cast on Biblical history by Clark and Wolfe, the famous Archaeologists, who had not only discovered the “Garden of Eden,” but also the fossil remains of Adam and Eve. The last heard of Crum, was that he was preparing for his tenth attempt at a trip to Mars. He will be assisted in the attempt by Connor, the distinguished aerial engineer. Spencer attempted to walk around the world, but was imprisoned in Lisbon for vagrancy. The U. S. Government has sent Judge Wood, of Greers, to obtain his release from the Spanish authorities. Shingler and G. D. Sanders are dancing masters at the Isle of Palms. Rhodes, after graduating at Welsh Neck, Cornell and Oxford, has at last settled down to a life of study. Dalton and Stevens are revenue officers. Lemmon holds a government claim at the North Pole and is collecting amber. On adjoining claims are Eason and Howle, who are catching polar bears and seals for Kaminer and Keel’s circus, in which O. M. Reid has made an enviable reputation as a clown. Heyward is colonel of the 25th regiment. Giles and Hooks are Unitarian evangelists, and at present are trying to work out a plan by which “skimming” can be cut out of the Fitting School at Clemson University. Horton has become quite a hero, being sheriff of Anderson county and master of a large kennel of blood hounds. Jones disappeared in the whirl of New York society. “Gov.” Taylor is now owner of the “Regal Shoe Co.” and sells shoes to Clemson cadets at half price. Durant and Hughes are trainers of prize-fighters. Klugh is tonsorial artist at Clemson University. Latimer got the 6th contract to build the Panama Canal, and intends to do it with the aid of Sloanogen. McCutchan writes popular novels which are illustrated by Pottinger. Lykes is a cotton grower in South Africa and his staple is manufactured by Perrin, the great South African cotton mill magnate. Mack was recently hurt in an electrical experiment, and is being ably attended by the eminent specialist, Dr. H. G. Lewis. Richardson and Samders are expert engineers and are running a tunnel under the English Channel. Tolbert is a specialist in fungus diseases of grain, Schirmer and Stone achieved greatness as military engineers in the war between the United States and Japan. Sam Reid is in charge of the farms at Clemson University.

Then, as if in answer to an unspoken wish, came my wife with a letter. It was from Furtick, calling a class reunion to be held in Atlanta on Thanksgiving Day.

J. C. Clark and L. S. Wolfe.
Privileges Granted Senior Privates

HEADQUARTERS, CORPS OF CADETS,

Paragraph I. Realizing the manly stand that the privates of the present Senior Class have taken in co-operating with me for the benefit of the whole college, and further realizing that these men are old enough to take care of themselves and to set an example for the under-classmen, I hereby take great pleasure in allowing this august body of young men the following privileges:

1st. They shall have “all night” lights and permission to use same until taps.

2nd. They shall be allowed to distribute themselves equally among the companies of the corps, and shall have the honor of being under the direct supervision of a non-commissioned officer.

3rd. They shall be allowed to go to reveille and to breakfast formations every morning, answering to their names at least twice during each roll-call.

4th. They shall be allowed to march in a military manner—column of twos with correct facing distance and cadence—to and from classes.

5th. They shall be allowed to stay in their rooms during study hours, and they shall be allowed at least two inspections by their respective captains during said study hours, to enable said captains to ascertain whether said privates are taking advantage of these privileges.

6th. They shall be allowed to wear at all times—even when in their rooms—the uniform of the corps, with blouses buttoned and hooked and directly connected to the ears by means of a standing collar.

7th. They shall be allowed to take three hours extra in theoretical military until they have thoroughly mastered the subject of lighting stretchers and wounded men, after which they shall be allowed to put said subject into practical use for three hours each week.

Par. II. Any privates not taking advantage of above privileges will be reported to the commander by above mentioned captains, and they shall be placed in close arrest and allowed to remain there until the Discipline Committee can convene and decide upon a suitable punishment for men who cannot appreciate a privilege.

Course of Study

The various courses of study are fully explained in the catalogues. Diplomas will not be issued to those who take irregular courses.

In the Agricultural Department there are courses and equipments for pure agriculture, horticulture, botany, bacteriology, entomology, veterinary science, geology and mineralogy, dairying and animal husbandry.

In the Chemical Department instruction is given in chemical science.

In the Mechanical Department the courses are applied mechanics, physics, drawing, forge and foundry work, machine shop, electricity, mechanical engineering and electrical engineering.

In the Textile Department instruction is given in weaving, designing, textile engineering, dyeing, etc.

The other departments are mathematics, civil engineering, English, political economy, history and military science.

Expenses

The deposit required from each student on admission is $61.38, except in the case of students who receive tuition free, when it is $51.38, which includes full uniform. Free tuition is given only to residents of the State. Blank applications for free tuition will be sent when applied for. After the first deposit a quarterly deposit of $26.88 for pay tuition students, and $16.88 for free tuition students is required at the beginning of each quarter. The quarters begin as follows: September 15, 1907; November 16, 1907; January 3, 1908, and April 4, 1908. This gives a total of $141.92 per year for students paying tuition, and $101.92 per year for students who receive tuition free.

These deposits pay for board, tuition, laundry fee, incidental fee, medical fee and one uniform. There are one hundred and twenty-four scholarships given to beneficiary students desiring to pursue the Agricultural course. Books and other necessary articles not mentioned will be furnished at cost.

Each student is required to bring four sheets, two blankets, one comfort, six towels, two pillow-cases and one pillow.

All Technical Men

Whether beginners or eminent specialists, need to read at least one technical paper regularly. In no other way can they keep so thoroughly in touch with developments in their chosen profession and profit by the practical experience of others engaged in similar work.

If you doubt the wisdom or necessity of subscribing, consult an instructor or any successful engineer.

We publish the leading papers devoted to Engineering, Electrical and Traction Industries. You need at least one of them.

The Engineering Record The most progressive paper published devoted to Civil Engineering and allied subjects. Weekly, $3.00 a year.

Electrical World. The foremost electrical journal in the world. Weekly edition, $3.00 a year; Monthly edition, $1.00 a year.

Street Railway Journal. The standard authority on City and Interurban Railroading. Weekly, $3.00 a year. Sample copies on request.

BOOK DEPARTMENT
We also have a Book Department that can supply any Engineering book published.
