State Property Tax Comparisons: Residential Property

Ellen W. Saltzman

KEY FINDINGS

This policy brief compares the taxation of residential property in South Carolina with that in four other Southeastern states: Georgia, North Carolina, Tennessee, and Virginia. Among the five states, South Carolina had the largest difference in property taxes faced by owner-occupied residential property and those faced by rental or second home residential property of the same value, in the same jurisdiction.

Among the five states, two factors contribute to large differences in tax bills faced by owner-occupied residential property and rental or second home residential property. These factors are:

1. Lower taxable values for owner-occupied residential property, and
2. Unrestricted property tax relief for owner-occupied residential property.

In Georgia, South Carolina, and Tennessee, owner-occupied residential property and rental or second home residential property is valued differently for tax purposes. *Excluding other tax relief*, at any given tax rate and property value:

- In South Carolina, a rental or second home will have a tax bill that is 50 percent higher than the tax bill of an owner-occupied residential property.
- In Tennessee, a rental or second home (2 or more units per property) will have a tax bill that is 60 percent higher than the tax bill for an owner-occupied residential property.
- In Georgia, owner-occupied residential property receives a reduction of \$2,000 in taxable value compared to rental/second home property. Thus the percentage

difference between the two tax bills depends on the value of the property, with the relative homeowner benefit declining as taxable value increases.

South Carolina provides an additional benefit for all owner-occupied residential property: full relief from school operating taxes. (Taxes for school debt service are not included in this tax relief.) School operating tax rates vary widely around the state, but can make up close to half of an entire tax bill. Using 2008 tax rates and exempting owner-occupied residential property from school operating taxes:

- In Greenville County/Greenville City, South Carolina, a rental or second home would have a tax bill that is 138 percent higher than the tax bill of an owner-occupied residential property of the same fair market value.
- In Pickens County/Clemson City, South Carolina, a rental or second home would have a tax bill that is 133 percent higher than the tax bill of an owner-occupied residential property of the same fair market value.
- In general, a rental or second home in South Carolina is likely to have a tax bill that is two to three times higher than the one for an owner-occupied residential property of the same fair market value.

The four other states do not provide unrestricted tax relief to homeowners.

METHODOLOGY

We examined laws governing the taxation of residential property in Georgia, North Carolina, South Carolina, Tennessee, and Virginia. We estimated 2008 county, municipal, and school district taxes owed in two counties in each state for owner-occupied residential property and rental or second home residential property valued at both \$100,000 and \$1 million. Taxes and fees for other taxing districts are excluded.

We only included homeowner property tax relief programs in the tax estimates when they were unrestricted; that is, available to persons of any age, disability or veteran status, and/or income level. Detailed analyses for each state are in the appendix.

STATE DIFFERENCES IN RESIDENTIAL PROPERTY TAXATION

We found significant differences in the tax treatment of residential property among the five states (Table I).

Table I. Property Taxation of Owner-Occupied and Rental/2nd Home Residential Property

	No difference in tax treatment	Lower taxable values for homeowners	Unrestricted tax relief for homeowners	Restricted tax relief for homeowners
Georgia		X		X
North Carolina	X			X
South Carolina		X	X	X
Tennessee		X		X
Virginia	X			X

- **North Carolina and Virginia** make no distinction for tax purposes between homeowner and other types of residential property.
- **Georgia** gives homeowners a \$2,000 reduction in the taxable value of their homes, which reduces taxes owed by a small amount over the taxes owed on a rental property with the same fair market value. Rental/second home residential property does not receive this discount.
- **South Carolina and Tennessee** each tax a smaller fraction of the market value of owner-occupied residential property than rental or second home residential property. In these states, tax bills are very different between these two types of property.
- **South Carolina** fully exempts all owner-occupied property from paying taxes for school operations. Because this homestead exemption is unrestricted and applies to all owner-occupied residential property, it was factored into the state tax comparisons. With the school tax exemption, owner-occupied residential properties pay much lower taxes than rental or second home residential properties, because school operating taxes may be close to half of the entire taxes owed.
- **Georgia, North Carolina, Tennessee, and Virginia** give partial property tax relief from some local taxes to homeowners who meet specific age, disability, or veteran status. Most of these programs set income ceilings for eligibility, which are generally quite low. In addition to school tax relief for all homeowners, **South Carolina** provides partial relief from county and municipal taxes to elderly and disabled homeowners. South Carolina's programs do not have an income ceiling. None of these restricted tax relief programs were included in the analysis in this policy brief.

CONVERTING MARKET VALUE INTO TAXABLE VALUE: ASSESSMENT RATIOS

Fair market value is the price a piece of property would sell for given a willing buyer and a willing seller. County and state property assessors periodically estimate the fair market value of real and personal property for tax purposes. The assessment ratio is the percentage of fair market value upon which tax is levied, which varies by state and by type of property.

Some states tax 100 percent of fair market value, including North Carolina and Virginia. This is known as a 100 percent assessment ratio. Other states tax a smaller fraction of a property's fair market value. Georgia taxes 40 percent of a property's value, which is a 40 percent assessment ratio (Table 2).

Still other states apply different assessment ratios to different kinds of property. Of the five Southeastern states examined, Tennessee and South Carolina assess owner-occupied residential property at a lower rate than rental or second home residential property. Tennessee has two assessment ratios: 25 percent for owner-occupied residential property and 40 percent for all other real property. South Carolina uses four different assessment ratios, which range from 4 percent to 10.5 percent. The 4 percent assessment ratio applies to owner-occupied residential property and the 6 percent assessment ratio applies to rental, second home, and commercial property.

Table 2. Assessment Ratios for Owner-Occupied and Other Residential Property

State	Owner-Occupied Residential	Rental/2 nd Home
Georgia (a)	40% of FMV less \$2,000	40% of FMV
North Carolina	100% of FMV	100% of FMV
South Carolina	4% of FMV	6% of FMV
Tennessee (b)	25% of FMV	25% or 40% of FMV
Virginia	100% of FMV	100% of FMV

(a) Georgia offers an additional \$2,000 reduction in assessed value for homeowner property, which is a 5.3% reduction in assessed value on a \$100,000 property, but only a 0.5% reduction on a \$1 million property.

(b) The 25% assessment ratio in Tennessee applies to single-unit, non-homeowner property. The 40% assessment ratio applies to non-homeowner property when there are 2 or more units on the same property.

The different assessment ratios in South Carolina and Tennessee make a large difference in the amount of tax owed on properties with the same fair market value, but a different tax status (Table 3). For any given tax rate and property value:

- In South Carolina, a rental or second home will have a tax bill that is 50 percent higher than the tax bill of an owner-occupied residential property (tax relief excluded).
- In Tennessee, a rental or second home (2 or more units per property) will have a tax bill that is 60 percent higher than the tax bill of an owner-occupied residential property (tax relief excluded).

Tennessee makes a distinction between types of rental or second home residential property. Tennessee treats rental or second home residential property as owner-occupied for tax purposes when there is only one unit per property, such as a single home on a lot. These properties are taxed using the 25 percent assessment ratio. When there are two or more units per property, however, those units are taxed using the 40 percent assessment ratio.

Georgia uses the same 40 percent assessment ratio for both owner-occupied residential property and rental and second home residential property, but the state gives homeowners a \$2,000 reduction in their assessed value before the tax rate is applied. This \$2,000 reduction in assessed value is less than 5 percent of the assessed value of properties over \$105,000 (fair market value), so it has a much smaller impact on taxes owed than the very different assessment ratios in South Carolina and Tennessee.

Table 3. State Assessed Value (AV) on Residential Property (\$100,000 fair market value)

State	Ratio	Owner-Occ. AV (a)	Ratio	Rental/2 nd Home AV (b)	Rental vs. Owner AV
Georgia (a)	40% less \$2,000	\$38,000	40%	\$40,000	5.3% higher
North Carolina	100%	\$100,000	100%	\$100,000	0% higher
South Carolina (b)	4%	\$4,000	6%	\$6,000	50% higher
Tennessee (c)	25%	\$25,000	40%	\$40,000	60% higher
Virginia	100%	\$100,000	100%	\$100,000	0% higher

(a) Georgia's \$2,000 reduction in assessed value for homeowner property is a 5.3% reduction in assessed value on a \$100,000 property, but only a 0.5% reduction on a \$1 million property.

(b) South Carolina example excludes effect of homeowner school property tax relief on taxes owed.

(c) The 25% assessment ratio applies to single-unit, non-homeowner property. The 40% assessment ratio applies to non-homeowner property when there are 2 or more units on the same property.

PROPERTY TAX RELIEF

All five states offer property tax relief to owner-occupied residential property (Table 4). Georgia, North Carolina, Tennessee, and Virginia restrict their homeowner tax relief to property owners who meet income and other criteria, usually age, disability, or veteran status. For example, Georgia's Standard Elderly General Homestead Exemption is limited to homeowners aged 65 and older whose annual income does not exceed \$10,000 (Social Security and some other retirement income excluded). This exemption reduces assessed value by \$4,000 and applies to state, county, and school taxes, including those for debt service. With Georgia's 40 percent assessment ratio, this level of property tax relief amounts to a 10 percent reduction in assessed value and in overall taxes levied.

Some Georgia counties also offer homestead exemptions that are more generous than the state's, but they are also restricted by age and/or income limits. In Virginia, elderly or disabled homeowners can obtain full or partial tax relief based on their income. Income limits are set by

the counties and vary around the state. South Carolina provides partial relief from county and municipal taxes to all elderly and disabled homeowners, but does not have an income requirement.

All tax relief programs that are available only to owner-occupied residential property reduce the amount of taxes paid by homeowners when compared to the taxes paid by owners of rental or second home residential property. Because most of these programs were established for the purpose of keeping homeowners with limited income in their homes in the face of rising taxes, they are restricted by age, disability, and income level. As such, they are available only to a portion of the state's owner-occupied residential property owners.

Table 4. State and Local Property Tax Relief

	Elderly	Disabled	Disabled Veteran	Other	Income Limits	Tax Deferral or Freeze	Not Restricted
North Carolina	X	X	X		X	X	
	X	X					
Tennessee	X	X	X		X	X	

(a) Qualifying conditions and tax relief provided vary from state to state.

In a departure from the traditional policy focus of homeowner tax relief, South Carolina also provides full relief from taxes for school operations to all owner-occupied residential property, regardless of the owner's age or income. This program is fairly new, starting in 2007. The effect of South Carolina's homeowner school tax relief on tax bill differences between owner-occupied and rental or second home residential property depends on local tax rates. In school districts where taxes for school operations are a larger share of total taxes, the greater the difference between taxes on owner-occupied and rental or second home residential property (Table 5).

Table 5. South Carolina Homeowner School Tax Relief: Impact on Tax Bills for \$100,000 Owner-Occupied and Rental/Second Home Residential Property

School District	Combined Tax Rate (a)	School Opns. Tax (b) (% of Total)	Taxes on Own-Occ. (c)	Taxes Rental/2 nd Home (d)	Percentage Difference in Tax Bill
Aiken	0.28510	43.5%	\$644	\$1,711	165%
Beaufort	0.19860	37.9%	\$494	\$1,192	141%
Calhoun	0.34000	37.9%	\$844	\$2,040	142%
Charleston	0.29070	37.5%	\$727	\$1,744	140%
Edgefield	0.50004	35.5%	\$1,290	\$3,000	133%
Lancaster	0.40550	35.4%	\$1,048	\$2,433	132%
Lexington 4	0.45060	49.0%	\$920	\$2,704	194%
Newberry	0.43974	42.2%	\$1,017	\$2,638	159%
Oconee	0.25240	47.7%	\$528	\$1,514	187%
Williamsburg	0.40890	31.5%	\$1,120	\$2,453	119%

(a) Combined rate includes school district operations and debt service, county and municipal tax rates in 2004. Rate is dollars tax owed per \$1,000 assessed value.

(b) Homeowner school tax relief is provided only for taxes for school operations, not for debt service.

(c) Owner-occupied residential property pays taxes for school district debt service plus county and municipal taxes. The assessment ratio is 4% of fair market value.

(d) Rental/second home residential property pays taxes on school district operations and debt service, plus county and municipal taxes. The assessment ratio is 6% of fair market value.

CONCLUSION

Among the five Southeastern states reviewed, South Carolina has by far the largest difference in property taxes on owner-occupied residential property compared to taxes on rental or second home residential property of equal market value.

In both South Carolina and Tennessee, different property assessment ratios ensure that tax bills on rental or second home residential property will always be significantly higher than tax bills on owner-occupied property of the same value in the same jurisdiction. In South Carolina, rental or second home property pays at least 50 percent more in taxes because of a higher assessment ratio; in Tennessee, such property pays 60 percent more.

Georgia reduces homeowner assessed value by \$2,000, but this adjustment lowers homeowner taxes less than five percent on all property over \$105,000 in fair market value compared to rentals and second homes. North Carolina and Virginia use the same assessment ratio for both types of residential property.

South Carolina's recently added school tax relief program for homeowners more than doubles the state's 50 percent difference in taxes on rental and second home property compared with owner-occupied residential property. The larger the share of taxes for school operations in

total taxes, the greater the difference between taxes on owner-occupied and rental or second home residential property. Higher school tax rates are more common in districts with low property values. In some other districts, taxpayers choose higher rates to buy better quality or expanded education services.

From a public policy perspective, South Carolina's very unequal taxation of rental and second home residential property will further erode the property tax base for all local governments by:

- discouraging private investment in rental residential property, which is a necessary component of the state's housing stock as well as an important resource for the state's tourism industry;
- encouraging investment in low cost but owner-occupied housing as an alternative to rental housing; and
- encouraging conversion of higher value second homes to primary residences, and vice versa.

From the fundamental public policy perspectives of equity, adequacy, and efficiency, South Carolina's recent changes in property tax burdens have made the state's property tax system less functional in all three objectives.

Ellen W. Saltzman is a research associate at the Strom Thurmond Institute. She studies state and local government tax policy and finances in South Carolina.
