Barry Stiefel, Ph.D.
ABSTRACT

This thesis examines the ecclesiastical buildings of the J.A. Dempwolf architecture firm of York, Pennsylvania. The prolific firm brought architecture to small cities and rural areas of central Pennsylvania and northern Maryland during the late-nineteenth and early-twentieth centuries.

During their tenure, the firm designed over six hundred buildings which included houses, churches, public buildings, hospitals, schools, and businesses; of these eighty-nine were ecclesiastical buildings. Included within this thesis are the survey of forty-five of the designed churches in chronological order by date of design and a list of the remaining forty-four. Also included are a history of the firm and examples of other buildings designed by the Dempwolfs.
DEDICATION

I would like to express most of my appreciation to my family. They are my rock and my support team. Without their encouragement, graduate school would not have been possible.

Thanks to the York County Heritage Trust staff and volunteers who spent countless hours and energy pulling files and photocopying documents for me in their library and archives. My appreciation is also extended to Lila Fourhman-Shall of the Heritage Trust who allowed me to reproduce a great deal of their Dempwolf collection enclosed in this thesis.

To Mark Shermeyer who graciously took a day to meet with me and allowed me to peruse his personal Dempwolf collection; without his encouragement and suggestions this thesis would have had an entirely different focus.

Special thanks to the churches that opened their doors and hearts and allowed me access to their buildings and archives, particularly: Rector Jeanne Jacobson of Holy Trinity in Hollidaysburg, PA; Darlene of First Evangelical Lutheran in Mifflinburg, PA; Reverend David Clark of Union Presbyterian in Kirkwood, PA; Dr. Don Roeder of First Lutheran Church in Carlisle, PA; Pastor John of Calvary Lutheran in Dover, PA; Pastor Sleigle of St. Peter's in York, PA; Bill at St. John’s German in York, PA; Trinity Lutheran Church in York, PA; Pastor Rooney of Christ Lutheran Church in York, PA; Dave B. of St. Paul’s in Carlisle, PA; Pastor Lovelace of St. John’s Episcopal in York, PA; Shelley of St. John Roman Catholic Church in New Freedom, PA; Kathy of Evangelical Lutheran Church in Waynesboro, PA; Pat of St. Mark’s in Hagerstown, MD; Laurel of Evangelical Lutheran...
Church in Frederick, MD; Pastor Brumbeck of St. Mary’s Lutheran Church in Silver Run, MD; Henry McLin of Emmanuel Reformed Church in Hanover, PA; Reader’s Café in Hanover, PA; Bob Spangler of Mt. Zion Church in Spring Grove, PA; Pastor Taualofai of Westminster Presbyterian Church in York, PA; Pastor Kreuger of St. John’s in Mt. Wolf, PA; Pastor Jim Shuler of Pine Grove Presbyterian Church in Airville, PA; Pastor Biller of Centre Presbyterian Church in New Park, PA; Terry of St. John’s in Columbia, PA; Julie of Zion Lutheran Church in Hummelstown, PA; Pastor Carol Honan Parr of St. John’s in Steelton, PA.

To John and Beverly Dempwolf, thank you for taking special interest and showing enthusiasm for this thesis. Your confidence has helped me tremendously.

Particular gratitude must be paid to my fellow Class of 2010; our collective confidence in one another has made graduate school magnificent. This experience would not have been so much fun without you.

To Ashley, my devoted thesis advisor, thank you for spending countless hours reading my drafts and faithfully giving me constructive criticism, momentum boosts, and praise at the appropriate times.

My appreciation goes out to anyone else that I may have forgotten who showed encouragement, support, or confidence is this project. Thank you!

10. The York Collegiate Institute was built utilizing the foundations of the previous building on the site. In the 1960s the building was demolished (Houghton, Osgood & Co. “York Collegiate Institute, York, PA.” The American Architect and Building News, July 30, 1887: 50.) ................................................................. 13

11. The Hough residence in Frederick, MD was completed in 1893 (Photo by author). ................................................................................................................................. 13

12. This Dempwolf signature stone can be seen on the Fluhrer Building in downtown York, PA (Photo by author). ......................................................................................... 14

THE ECCLESIASTICAL BUILDINGS OF THE DEMPWOLF ARCHITECTURE FIRM

1. St. John’s German Lutheran Church, located in York, PA was designed in the Gothic-Revival style in 1874 (York County Heritage Trust Library & Archives. “J.A. Dempwolf.” Vertical File 11022.) ................................................................. 19

3. St. Peter’s Evangelical Lutheran is a small urban church designed in the Shingle style, ca. 1892 (St. Peter’s Evangelical Lutheran Church. 1891-1930 - Dedication Services of St. Peter’s Evangelical Lutheran Church. York, PA: unpublished pamphlet, 1930.) .... 20

4. Centre Presbyterian is a rural church which was designed in the Romanesque-Revival style in 1886 (Photo by author). ........................................................................................................ 21

5. St. John’s Evangelical Lutheran is an urban church which was designed in the Romanesque-Revival style in 1892 (Photo by author). ................................................................. 21

6. St. John’s Evangelical Lutheran Church located in Steelton, PA includes most of the features seen in auditorium-plan buildings: square plan, thin columns, bowed floor sloping to the altar, and a preaching stage (Photo by author)......................... 23
List of Figures (Continued)

Figure

7. St. Matthew’s Lutheran Church, originally located in Hanover, PA was designed in 1878 and included a preaching platform, choir loft, and organ (St. Matthew Lutheran Church. *Outline of St. Matthew’s History*). http://www.stmattlutheran.org/Pages/History/history_main.htm (accessed September 14, 2009) ................................................. 23

8. The Sunday school chapel for Calvary Presbyterian Church was typical of the first educational buildings of the era – slightly utilitarian with little decoration. It was designed in 1882 (York County Heritage Trust Vertical File 34195. "Dempwolf Drawings."). .......................................................................................................................... 24

9. The original drawings for St. John’s Evangelical Lutheran Church in Steelton, PA shows the top portion of the building designed in an Akron Plan with five classrooms surrounding the main room on the first floor and an additional seven classrooms on the second floor (York County Heritage Trust Vertical File 34195. "Dempwolf Drawings."). .......................................................................................................................... 25

10. St. Paul’s Evangelical Lutheran Church located in Carlisle, PA originally had an Akron-Plan Sunday school with six classrooms surrounding the main room on the first floor and an additional nine classrooms on the second floor (Photo courtesy of Dave Boyles). ....................................................................................................................... 26

11. Emmanuel Reformed Church located in York, PA was designed in a small-scale late-Gothic style (*The York Dispatch*. "New Reformed Church Formally Dedicated." November 28, 1904.). ......................................................................................................... 27

12. Union Evangelical Lutheran Church located in York, PA was designed in a large-scale late-Gothic style (Photo by author). ....................................................................................................................... 27

13. The chart plots the number of churches designed each year by the Dempwolfs; note the peak year of 1894 when seven buildings were designed (Chart by author). 29

14. The rolling blinds can still be seen at Zion Reformed Church in Spring Grove, PA (Photo by author). ....................................................................................................................... 30

15. Moveable glass partition walls have been retained in Zion Lutheran Church, York, PA (Photo by author). ....................................................................................................................... 30

A SURVEY OF THE ECCLESIASTICAL BUILDINGS OF THE J.A. DEMPWOLF ARCHITECTURE FIRM – YORK, PA

1. A map of Pennsylvania and Maryland depicts the locations of the forty-five churches surveyed for this thesis. Note the red star which shows the location of York, PA. Fourteen churches are located here, including numbers 1, 6, 7, 9, 11, 12, 17, 18, 31, 37, 38, 41, 42, and 43 (Map by author). | 37 |

ST. JOHN'S GERMAN LUTHERAN CHURCH – YORK, PA

2. A drawing of the church building with the original tower design (York County Heritage Trust Library & Archives. "J.A. Dempwolf." *Vertical File 11022.*). | 39 |

3. The church was built in 1874-74, with tower renovations occurring in 1914; additions to the adjacent Sunday school building were also designed by the Dempwolf firm in 1928 (Photo by author). | 40 |

4. Detail of the stepped brick gothic arches and verge board decorating the gable end on the front façade (Photo by author). | 40 |

5. The west side elevation of the church today (Photo by author). | 41 |

6. The interior of the church retains many of the original elements including the tiered balcony and woodwork (Photo by author). | 41 |

7. The interior of the church looking north (Photo by author). | 42 |

CHAPTER ONE

INTRODUCTION AND METHODOLOGY

The most prolific architecture firm in York, Pennsylvania in the late-nineteenth and early-twentieth centuries was the J.A. Dempwolf firm that practiced from 1874 until the 1930s. While the firm designed and built over six hundred civic, residential, ecclesiastical, governmental, and institutional buildings, they are hardly known outside of the York region. This thesis provides a history of the firm, and surveys and catalogs their church buildings located in central Pennsylvania and northern Maryland. Analysis of the buildings is completed to better understand the context and cultural influences of the York firm.

I grew up in a small town just outside of the city of York, Pennsylvania which is located to the north of Washington, DC and Baltimore, Maryland and to the west of Philadelphia, Pennsylvania. Being familiar with York all of my life, I took the city for granted, and never particularly noticed the architecture. After receiving my undergraduate degree in architecture from Penn State University, I returned to York and began working for a contractor in the city and volunteering with the historic preservation non-profit. I immediately became familiar with the history and the architecture that I had previously ignored. Frequently the name of the architect ‘Dempwolf’ was uncovered when I was researching the histories of buildings and I quickly learned that the Dempwolf architecture firm dominated the market from the 1880s through the 1920s. Many favorite buildings were designed by them, including Central Market, the Bon Ton Department Store building, the Capital Theatre, the old Court House, the Hahn Home, and Martin Memorial Library.
During the summer of 2009, I started research at the York County Heritage Trust Library and Archives located in downtown York. It holds a significant amount of Dempwolf records and drawings. Although there has been a large amount of information collected on the Dempwolf firm, very little has been published. Two unpublished papers were written discussing materials and architectural styles the firm commonly used. A thesis was written by Mark Shermeyer about the Public School buildings designed by the firm. Besides these resources, nothing else has been written on the firm.

After visiting the Heritage Trust, I met with Mark Shermeyer, the man who wrote his thesis on the Dempwolfs and who is currently an architect practicing in York, PA. He has become an expert on the firm and a collector of Dempwolf memorabilia. I spent a day sorting through his archives and speaking to him about ideas for appropriate thesis topics. He suggested I look at their church buildings and survey those that still existed.

1 The York County Heritage Trust Library and Archives holds individual vertical files for John Augustus, Reinhardt, and Frederick Dempwolf, the J.A. Dempwolf architecture firm, and the Dempwolf Architectural Drawings.
3 Shermeyer, Mark David. The Dempwolf Public Schools. Masters Thesis, Pittsburgh, PA: Carnegie-Mellon University, Department of Architecture, 1982. The thesis can be accessed at the York County Heritage Trust Library and Archives. The thesis surveys a group of Dempwolf-designed school buildings. It also includes a history of the firm and an appendix devoted to various other buildings designed by the firm.
I next downloaded a copy of the index of the Dempwolf Architectural Drawings database from the York County Heritage Trust’s website. The index lists all of the Dempwolf drawings that the Heritage Trust has in its digitized collection. The Trust received a grant from the Pennsylvania Historical and Museum Commission to photograph two thousand drawings of the J.A. Dempwolf firm and another designer, Charles A. Williams. Each drawing was photographed, a negative was created, a positive contact was printed, and the prints were filed in the Trust’s archives. These drawings date from 1880s through the 1930s. Using this list, and more specifically the list of the churches, I began looking at the drawings. I recorded information about each church and included a sketch of the building. Also in the Trust’s possession is J.A. Dempwolf’s ledger which lists all of the work the firm produced. This catalog gave additional information and also gave another list of churches whose drawings no longer exist.

Upon returning to Charleston for the fall semester, I continued to search for information on the Dempwolf firm through the Heritage Trust, other area archives, and the internet. After combining the list of Trust’s church drawings and the churches listed in J.A. Dempwolf’s ledger, a list of eighty-nine churches was formed. Disregarding properties which only had auxiliary buildings and small interior renovations designed for them, I searched the internet for existing congregations that had hired the Dempwolf firm to design a church. If the congregation had dissolved, attempts were made to determine if the

5 Negatives of the Dempwolf Architectural Drawings can be accessed at the York County Heritage Trust: York County Heritage Trust Vertical File 34195. "Dempwolf Architectural Drawings."
6 J.A. Dempwolf’s ledger can be accessed at the York County Heritage Trust’s Library and Archives: York County Heritage Trust vertical File 11022. "J.A. Dempwolf."
building still existed. This led me to a list of forty-five churches within a 150-mile radius of York, PA. By the end of the semester, I was scheduling visits to survey the buildings.

Between the end of December 2009 and the beginning of January I surveyed thirty-eight churches. I also spent time at the Maps Library at Penn State University acquiring Sanborn Maps for each of the Pennsylvania sites and I looked up each of the individual church files at the Heritage Trust, which included an additional seven buildings that had been demolished.7

The information was organized to create this thesis. The first chapter includes a history of the Dempwolf firm and a brief survey of the types of buildings they designed. The second chapter includes a description of the era in which the Dempwolfs were designing. Discussed in this chapter are the changes in architecture as a profession, the economy of northern Maryland and central Pennsylvania at the time, and church architecture evolution in the United States and how a majority of the Dempwolf churches accurately fit into this timeline. Also included is an introduction to the churches designed by the Dempwolfs, statistics on who they were designing for, where they were designing, and what style they were designing, a map showing the locations of all forty-five churches that are surveyed within this document, and a list of common themes and elements that can be seen in a majority of the churches. Chapter Three is the survey of forty-five churches designed by the Dempwolfs and includes historic and modern pictures, maps, drawings, and written descriptions. The conclusion chapter summarizes the findings from this project. Finally, the appendix lists an additional forty-four ecclesiastical buildings that were not surveyed due to

---
7 The maps can be accessed in the Sanborn Maps Room of the Pattee Maps Library at Penn State University’s University Park campus. Individual church files can be accessed at the York County Heritage Trust Library and Archives by church name.
accessibility issues, a lack of information, and the fact that the church may not have been built or could not be found.

Due to the number and quality of the buildings that were designed by the firm, the Dempwolfs deserve the recognition and respect bestowed upon better-known architects of the same time. Appreciated and well-known by the residents of York County, Pennsylvania, it is the goal of this thesis to enlighten others to the brilliance of the Dempwolf firm. They were not stylistically innovative, but due to their remarkable range of styles they were world-class architects. Unfortunately, due to their provinciality, the firm’s legacy has been neglected.
CHAPTER TWO

THE HISTORY AND BUILDINGS OF THE DEMPWOLF ARCHITECTURE FIRM

John Augustus (J.A.) and Reinhardt Dempwolf were brothers (figs. 1, 2). Both were born in Brunswick, Germany; J.A. on October 3, 1848 and Reinhardt on December 4, 1861. In 1867, they, along with their parents, Carl, Sr. and Wilhemine, two sisters, and two brothers, emigrated to the United States, settling in York, Pennsylvania.¹

Nineteen at the time of his emigration, J.A., considered an adult, had to find work of his own. After a brief employ at the P.A. and S. Small Milling Company in York, he became interested in building construction. In 1869 he was apprenticed to carpenter William Gotwalt of York. A year later, J.A. was employed in the planing mill of building contractor Nathanial Weigel of York, who J.A. would later employ as contractor for many of his buildings. While employed in the planning mill he made a majority of

the details for St. Paul’s Lutheran Church in York, which was designed by architect Stephen D. Button of Philadelphia. J.A.’s firm would later design renovations to St. Paul’s. In 1871 he moved to New York City where he worked as a foreman during the day and took classes at night. In 1873, J.A. graduated from a two-year night architectural drawing and design course at the Cooper Union Institute. “The Union,” as it was called, had a goal to give an excellent education to the children of immigrants and the working class. The co-ed night classes were first held in the applied sciences and architectural drawing. After graduation, J.A. superintended the construction of the Cathedral of the Holy Cross in Boston, Massachusetts (fig. 3). The Gothic-Revival church was designed by Brooklyn-based architect Patrick Keely in 1866. Primarily known for designing over six-hundred churches and one-hundred institutional buildings,
Keely trained many future architects as prolific church designers as well.⁶ In 1874, he returned to York to design his first church, St. John’s German Lutheran Church, at the behest of his father, Carl Dempwolf, Sr.⁷ This was the first building that former employer Nathaniel Weigel would build with J.A. After construction was completed, J.A. moved to Philadelphia to work in the architectural firm of Stephen D. Button. Button had received a commission for buildings for the Centennial Exhibition Philadelphia would host in 1876. J.A. had planned to stay in Philadelphia, but returned to York in 1876 to begin his own firm at the request of York philanthropist Samuel Small, Sr.⁸ He opened an architecture office in Small’s Cassat Building in York’s Continental Square, which he would occupy for a full fifty years until his death (fig. 4).⁹ A significant amount of work would later come to the firm through the Small family and other elite York county families, including the Pfaltzgraff family, the Appel family, the Schmidt family, and the Glatfelter family.

---

⁷ Shermeyer, 1982.
⁸ Ibid.
When J.A. returned to York for the last time, his brother Reinhardt was fifteen. After being educated at the York County Academy and the York Collegiate Institute, Reinhardt went to Philadelphia to study sculpture, his passion, for almost three years. J.A. then funded Reinhardt’s studies at the Ecole des Beaux-Arts in Paris. After two years of study there, J.A. requested that he return to York (fig. 5)\(^\text{10}\) Unfortunately, Reinhardt was not entirely happy with this. His friend, Whitney Warren, who later co-designed Grand Central Station among other well-known landmarks, had asked Reinhardt to join him in New York City to start a firm there. Reinhardt returned to York while Whitney continued on to New York City, though Reinhardt longed to do the same thing.\(^\text{11}\)

Together the brothers designed an assortment of buildings of every purpose and style and soon were sought out by people from all over the country including the American Institute of Architects. In 1901, J.A. was elected as a member of the AIA and was an active member of the Central Pennsylvania Chapter of the AIA after it was formed in 1909; he

\(^{10}\) Shermeyer, 1982.  
\(^{11}\) Ibid.
served as its president four years later. In 1915, he was elected a Fellow of the AIA. Reinhardt was elected as a member of the Institute in 1909 and became a Fellow in 1932. He also served as the president of the Central Pennsylvania Chapter in 1919 and 1920.

J.A.’s son, Frederick, was also a big part of the firm (fig. 6). Born June 29, 1885, Frederick was highly educated, studying at the York Collegiate Institute, MIT (graduating in 1907), the Ecole des Beaux-Arts, and the American Academy in Rome. In 1911, he entered his father’s firm and worked as a draftsman for one year. He then moved to Chicago and worked for Marshall and Fox for fifteen months in 1911-13. While there he designed North Shore apartment buildings, hotels, country clubs, and residences. He then moved to New York City and worked for Hewitt and Bottomly designing country houses, schools, and churches. Fred returned to York in 1915, only to enlist in the United States Army. He served as Captain during World War I in France and Germany in 1918. He finally returned to York permanently in 1919 and began work at his father’s firm.

---

When J.A. died in 1926, Frederick took over the firm. Reinhardt continued working until the early-1930s, at which point, Fred took over completely. Fred was also elected as a member of the AIA in 1921 and served as president of the Central Pennsylvania Chapter in 1934.\textsuperscript{15} The firm saw hard times during the Depression and produced very little during this time.

The legacy of the Dempwolf firm included buildings in ten states, including New York, Pennsylvania, New Jersey, Maryland, Delaware, West Virginia, Virginia, Indiana, North Carolina, and Colorado. It is conjectured that the firm designed over

\begin{figure}[h]

\textsuperscript{15} York Dispatch, “F.G. Dempwolf Dies.” January 5, 1970.
\textsuperscript{16} This information was obtained from the personal files of Mark Shermeyer.
six-hundred buildings during its tenure including public, buildings, businesses, factories, schools, churches, residences, hospitals, and outbuildings.¹⁷

An example of a public building the Dempwolfs designed is Citizens National Bank located at the southeast corner of Patrick and Market Sts. in Frederick, MD. Founded in 1886, both buildings in the bank’s history were designed by the Dempwolf firm. The first building was composed of brick and brownstone and was four stories tall; only a portion of this building was used for banking purposes (fig. 7). After outgrowing this building, it was razed. Using this lot and a newly-purchased adjacent lot, a larger structure was built. The bank hired J.A. Dempwolf to once again design a building for them. Construction began in the spring of 1908, and was completed for occupation in July 1909. The building is composed of Concord Granite and is considered fireproof (fig. 8).¹⁸

Another public building is the Central Market House, located at 34 W Philadelphia St., York, PA. Designed in the Romanesque Revival style, the market was constructed in 1888 for $45,000.\(^{19}\) Composed of brick and heavy timber it is still used as a market today (fig. 9).

The York Collegiate Institute Building was a school designed by the Dempwolfs. Replacing a building damaged by fire, the Dempwolfs designed the building to utilize the old foundations. Composed of brick and Hummelstown brownstone, and set on a granite base, the building had room for 250 students, a library, and classrooms (fig. 10). The total cost of construction was $70,000.\(^{20}\) The building was demolished in the 1960s for a gas station.\(^{21}\)

An example of the residential architecture the Dempwolfs designed stands at 228 N Market St, Frederick, MD. It was designed in 1891 and construction was completed in 1893. The house is designed in the Romanesque Revival style and is composed of brick and brownstone. The building is used as a restaurant today (fig 11).

Also important to the Dempwolf story is a series of signature stones which can be seen on some of their buildings (fig. 12). The stones are seen in a variety of materials, including terra cotta and brownstone, and are usually placed on a side elevation. It is theorized that the stones were placed on buildings of which the firm was most proud.

CHAPTER THREE
THE ECCLESIASTICAL BUILDINGS OF THE
DEMPWOLF ARCHITECTURE FIRM

The J.A. Dempwolf architecture firm was established in York, Pennsylvania in 1876 and continued through the 1940s. Practicing architecture during this period and in this location was ideal for a new firm. Both architecture as a profession and the area of central Pennsylvania and northern Maryland saw expansion during Dempwolf firm’s tenure.

Prior to the formation of what would become the American Institute of Architects in 1857, no schools of architecture or professional licensing existed. Essentially anyone could call themselves an architect, and many people associated with the building trades did. In 1857 the New York Society of Architects was formed by thirteen architects who wanted to elevate architecture to a more professional occupation. The idea quickly caught on and by the mid-1860s architects in other cities wanted to join the Society. Under the united American Institute of Architects, it was decided that chapters would be organized in individual cities; by 1887 there were eleven chapters in major cities across the United States. Early AIA membership numbers show the increase in interest by architecture professionals: in 1857, there were twenty-nine members, by 1889, there were 465 members.1

---

The AIA helped push for standardization within the profession. In 1866, a fee schedule was adopted which aided in defining what an architect was and what an architect did. In 1870, a document was passed to ensure architects would be involved in planning and overseeing building design and construction. Similarly, the AIA also helped with architectural education. The Institute dreamt of creating an architecture school in the United States similar to the Ecole des Beaux-Arts in Paris, France. Because funding fell through, they focused their efforts on developing existing fledgling design schools and developing new architecture schools. The first architecture school was the Massachusetts Institute of Technology, which was formed in 1868 with four students. By 1879, the program had thirty students. Cornell University’s program, formed in 1870, the University of Illinois’ program, formed in 1870, and Syracuse University’s program, formed in 1873, were some the schools which followed quickly behind the first. By 1896 there were nine architecture schools located within the United States which educated 273 students altogether. Most importantly, in 1897, the first licensing law was passed in Illinois requiring an architect to be licensed before being allowed to practice architecture.

These developments shaped the architecture profession immediately before and during the time the Dempwolf firm was in practice. Seeing as J.A. was elected as a member of the AIA in 1901 (Reinhardt was elected in 1909), the rise in interest of architecture professionalism had certainly reached small cities and towns of central Pennsylvania and northern Maryland.²

Also changing during the firm’s tenure was the economic structure and growth in central Pennsylvania and northern Maryland. Germans settled the area as early as 1728, and the borough of York was formally laid out in October of 1741. Throughout the rest of the eighteenth century and up to the mid-nineteenth century, the city slowly grew from a small agrarian settlement to a larger industrial town. Towards the end of this time period, the region became a stop on the major Baltimore and Susquehanna Railroad in 1838, and telegraph lines were placed throughout York in 1847. The Borough escaped the Civil War by surrendering early and supplying the Confederates. Because no destruction occurred within York, development after the War was easily restarted. Large groups of immigrants moved to the area seeking factory employment causing an increase in population and development. For this reason, in 1887 York, with a population of about twenty thousand, officially became a city. By the turn of the twentieth century, York was a large center for commerce and industry, with an influx of new people and facilities. Between the years of 1880 and 1930, the population of York grew fourfold, from 13,940 to 55,254 residents. However the areas around the city and a majority of the county remained rural.

Despite this, central Pennsylvania and northern Maryland were prime examples of how prosperous agricultural communities transitioned into healthy industrial communities. Factories, particularly mills, were prevalent at the time. To support the flourishing growth,

---

railroads were expanded to serve the agricultural industry as well as the increase of the transport of raw materials – coal, iron ore, stone, and lumber.

In the 1830s York County was connected with Baltimore and areas south by the railroad. Eventually the area would connect east to Philadelphia. Extensions to the north (Harrisburg) and west (Pittsburgh) would not occur until about 1850. The years of the Civil War did not hinder the area and earnings actually increased threefold in the railroad industry (from about one million dollars to about three million dollars). Because of this, little transition was needed after the war to rebuild and the years between 1868 and 1928 saw a period of expansion. The primary sources of revenue at this time came from raw materials like coal and slate, agricultural products, and manufactured goods. By the turn of the twentieth century, there were seven railroad lines which crossed the county to larger urban centers; the City of York was the hub for five of the lines alone.

Rural areas saw increased growth along with the industrial towns along the rail lines. Additionally farmers could now sell their produce to buyers in Philadelphia and Baltimore. The combination of agricultural progress and railroad development created a period of intense expansion within the area. Conversely, the years after this – the Great Depression through World War II – saw a period of decline.5

The new laws requiring architects to be licensed in order to design public buildings, and the fact that southern Pennsylvania and northern Maryland were prospering, the Dempwolf firm was wise to establish themselves in this region. The fact that the firm

produced designs for over six hundred buildings from 1874 through the 1940s illustrates the economic and architectural climate of the area and the nation.

Of these six hundred buildings, eighty-nine were ecclesiastical buildings. Of these six hundred buildings, eighty-nine were ecclesiastical buildings. During this period, the forms of American churches were changing to meet the needs of the congregation and to follow the popular architectural styles of the period.

In the nineteenth century, Gothic-Revival architecture was the appropriate form for church architecture and a vast majority of congregations used the style for their buildings. A majority of the Dempwolf firm’s earliest churches were designed in the Gothic-Revival style (fig. 1).

---

During this time, a search to find a uni-denominational church type was occurring. Some believed that Gothic-Revival Buildings were the answer; others believed that the new religions of the Second Great Awakening of the 1820s and 1830s warranted a new style of architecture.\textsuperscript{8} At the same time, the Dempwolfs were designing two different styles of ecclesiastical buildings. The first were small, wood-frame buildings in the Stick-, Shingle-, or Queen Anne-style, and were primarily built for small urban and rural congregations. Examples include the Mission Chapel of Calvary Presbyterian Church located in York, PA, designed in 1882, Pine Grove Presbyterian Church

\begin{figure}[h]
\centering
\includegraphics[width=0.8\textwidth]{pine_grove_church.png}
\caption{Pine Grove Presbyterian is a rural church designed in the Folk Victorian style in 1885-86 (Pine Grove Presbyterian Church. 130th Anniversary: Pine Grove Presbyterian Church, 1857-1987. Airville, PA; unpublished pamphlet, 1987.).}
\end{figure}

\begin{figure}[h]
\centering
\includegraphics[width=0.8\textwidth]{st_peter_church.png}
\caption{St. Peter’s Evangelical Lutheran is a small urban church designed in the Shingle style, ca. 1892 (St. Peter’s Evangelical Lutheran Church. 1891-1930 - Dedication Services of St. Peter's Evangelical Lutheran Church. York, PA; unpublished pamphlet, 1930.).}
\end{figure}

located in Airville, PA, designed in 1885-86 (fig. 2), St. Peter’s Evangelical Lutheran Church located in York, PA, designed c. 1892 (fig. 3), and St. James Evangelical Lutheran Church located in Hellam, PA, designed in 1894. The second building style being employed by the Dempwolfs was monumental, stone and brick buildings, usually designed in the Romanesque revival and Richardsonian Romanesque styles. These large buildings were intended for large urban congregations. A variety of Romanesque Revival buildings were designed by the Dempwolf firm including the church building of Calvary Presbyterian Church located in York, PA, designed in 1884, Centre Presbyterian Church located in New Park, PA (fig. 4), designed in 1886, Westminster Presbyterian Church located in York, PA designed in 1887, Brua Memorial Chapel located in Gettysburg, PA, designed in 1887-88, St. Jacob’s Union Church located in Glenville, PA, designed in 1889, the Evangelical Lutheran Church Sunday school building located in Frederick, MD, designed in 1890, Trinity Evangelical Lutheran Church located in Chambersburg, PA, designed in 1891, Zion Lutheran Church located in Hummelstown, PA,
designed c. 1891, St. John’s Evangelical Lutheran Church located in Steelton, PA, designed in 1892 (fig. 5), the Evangelical Lutheran Church located in Taneytown, MD, designed c. 1896, and the Evangelical Lutheran Church located in Mifflinburg, PA, designed in 1898.

Rapid population and industrial growth had a large affect on cities and on evangelical religion.9 Many churches followed their congregation members as they left the center city for new suburbs. The interest in auditorium-style plans increased at the same time. The idea of performing arts as a media to entice the congregation to participate more became popular. Because of these influences, preaching platforms, with choir lofts and organ spaces behind, replaced pulpits and bench pews sometimes in a semi-circular pattern were added.10 These changes in spatial layout can be seen in the earlier churches designed by the Dempwolfs. Many included preaching platforms with choir lofts and organs behind and bench pews. The auditorium-plan churches designed by the Dempwolf firm utilized shared features: centrally-located plans; the elimination of visual obstructions, such as large columns; curved pews sloping down to the chancel; a preaching platform at the chancel. Thin or cast iron columns are seen in St. John’s German Lutheran Church located in York, PA, designed in 1874, St. John’s Protestant Episcopal Church located in York, PA, designed in 1882, Westminster Presbyterian Church located in York, PA, designed in 1887, St. John’s Evangelical Lutheran Church located in Steelton, PA, designed in 1892 (fig. 6), and the Evangelical Lutheran Church located in Mifflinburg, PA, designed in 1898. Curved pews located on inclined floors can be seen in Calvary Presbyterian Church originally located in York, PA, designed in 1884, Centre Presbyterian Church located in New Park, PA, designed

---

10 Kilde 2002, 76-78.
in 1886, Brua Memorial Chapel located in Gettysburg, PA, designed in 1887-88, and St. John’s Evangelical Lutheran Church located in Steelton, designed in 1892. Nearly all of the churches included a large preaching stage (fig. 7).

In the late-nineteenth century, congregation involvement in church design became popular. Active members of congregations created wish lists, hired architects, and built new churches. The architects, in turn, were increasingly excited to address the practical issues of design especially as work was lucrative after the previous financial panics of the late-1800s.\(^\text{11}\) The increased study of the architecture profession also harbored excitement in the design field. *American Architect and Building News*’ two-part article “Modern Church Building” and E.C. Gardner’s 1880 “Common Sense in Church Building” gave suggestions and examples to architects across the country as to this new demand and examples of newly built churches.\(^\text{12}\)

\(^{11}\) Kilde 2002, 114-115.
Also at this time, congregations were expanding their mission to include education and recreation rather than just worship.\textsuperscript{13} It was believed that religious instruction gave the country moral character and to be most successful a church had to cater to every age including children.\textsuperscript{14} The Dempwolf-designed Sunday school chapel for Calvary Presbyterian Church in York, PA, is a good example of an early education building which was separate from the church (fig. 8). Churches also incorporated classroom spaces into the church building, rather than having two separate edifices. The Dempwolfs designed churches like these where the classrooms were located on the first floor and the sanctuary was located on the second floor. Examples of these churches include St. Matthew’s Lutheran Church originally located in Hanover, PA, Zion Evangelical Lutheran Church located in York, PA,

\begin{figure}[h]
\centering

\end{itemize}
\end{footnotesize}
the Evangelical Lutheran Church located in Taneytown, MD, and Union Presbyterian Church located in Kirkwood, PA.

In 1872, at a national Sunday school teacher’s conference, attendees agreed that a system of uniform lessons should be adopted. This meant that all ages of Sunday school members learned the same things.\(^\text{15}\) A building with space that could be subdivided by moveable partitions was developed. The Akron Plan, which was developed in the 1860s by Lewis Miller in Akron, Ohio, used the theatre-like qualities similar to the former auditorium sanctuaries as a precedent for his new Sunday school design. He formulated a building surrounded on three sides by tiers of classrooms which were divided by heavy curtains or moveable partitions.\(^\text{16}\)

Many Sunday schools were located in separate buildings, but other shared walls with the sanctuary, either the chancel or a side wall. If a side wall was shared then the wall was usually a moveable partition. J.A. Dempwolf’s Akron plan design for St. John’s Evangelical Lutheran Church in Steelton, PA was depicted in Architectural Record’s 1916 “Church

\(^\text{16}\) Hudnut-Beumler, 1997.
Planning in the United States” as a prime example of the sanctuary and Sunday school portions sharing a side wall. A select amount of Dempwolf churches included Akron-Plan spaces. As mentioned above St. John’s Church in Steelton, PA was a prime example of this organization (fig. 9). Other buildings include Trinity Evangelical Lutheran Church located in Chambersburg, PA, designed in 1891, St. Paul’s Evangelical Lutheran Church located in Carlisle, PA (fig. 10), designed in 1898, Emmanuel Reformed Church located in Hanover, PA, designed c. 1899, Zion Reformed Church located in Spring Grove, PA, designed c. 1902, and Trinity First Reformed Church located in York, PA, designed 1926-27.

Even though the Institutional churches reflected the social theology and ideology of the time, it was only popular for a limited amount of time. Peaking in the 1890s, the style slowly diminished in popularity after that due to the disenchantment of the Uniform Lessons System.

---

At this time, architects were returning to Gothic-style architecture. The Dempwolfs incorporated two main styles of Late-Gothic churches into their designs. Churches located less-developed areas tended to be smaller and informal. For churches located on major roads, the buildings were larger and more formal. In most cases the plans of these buildings reverted back to the basilica plans of the former Gothic-Revival style. A few Dempwolf churches were designed in the smaller, informal type including Emmanuel Reformed Church located in York, PA, designed c. 1904 (fig. 11), Grace Evangelical Lutheran Church originally located in York PA, designed c. 1907, and Holy Trinity Mission Church located in Hollidaysburg, PA, designed c. 1909. Other Dempwolf churches took the larger, formal design including Memorial Evangelical Lutheran Church located in Harrisburg, PA, designed in 1925, Union Evangelical Lutheran Church located in York, PA, designed in 1926 (fig. 12) and St. Mark's Evangelical Lutheran Church located in Hagerstown, MD, designed in 1928.
The Dempwolf firm was designing in a time when new styles developed with each new generation. From the original Gothic-Revival style to the neo-medieval auditorium plan to the Akron Plan and finally back to the Late-Gothic style, the Dempwolfs stayed progressive with their designs and the time in which they were designing. Congregations asked for buildings similar to those being designed in larger and more radical cities across the country and the firm brought these designs to small cities and rural areas throughout Pennsylvania and Maryland.

The Dempwolfs were highly-educated men who brought their knowledge of architectural precedents from larger cities to the smaller cities, towns, and rural areas of central Pennsylvania and northern Maryland. Of the eighty-nine ecclesiastical buildings that the Dempwolfs designed between 1874 and 1941 (including those that were not built), forty-one (46%) were located in larger urban centers, twenty-eight (32%) were placed in smaller urban towns, and twenty (22%) were located in rural settings. Of these the twenty rural churches were located in highly agrarian areas whereas the remaining three-quarters were located in the industrial centers and working communities of Pennsylvania and Maryland. Because they designed buildings for a variety of worshippers and locations, the churches varied greatly in size. The smallest church is roughly eleven hundred square feet (United Brethren Church in Hanover, PA) and the largest church is roughly eighteen thousand square feet (St. Paul’s Evangelical Lutheran Church in Carlisle, PA).

The chart plots the number of churches the Dempwolfs designed each year from 1874 through 1941 (fig. 13). Ecclesiastical design work peaked in 1894 with seven churches being designed that year. Unfortunately the Panic of 1893, which caused a recession that lasted until 1896, affected the number of churches designed in the two years following the
Dempwolfs biggest year. In fact, a few other recessions affected the amount of work which came to the Dempwolfs: a recession followed the Panic of 1907 and lasted through the next year, the post-World War I recession lasted from 1918 until 1921, the 1926 recession began in October of that year and lasted through November 1927, and the Great Depression occurred from August 1929 until June 1938.\(^{20}\)

A majority of the churches surveyed (seventeen of the forty-five, or about 38%) were designed in the Gothic style, including the Gothic Revival of 1860 to 1880 and the late-Gothic of 1895 through 1930. Fifteen of the forty-five churches surveyed, or 33%, were designed in the Romanesque Revival or Richardsonian Romanesque style of 1880-1895. The

remaining thirteen buildings, or about 29%, were designed in an assortment of styles including Stick, Shingle, Victorian, Folk Victorian, Queen Anne, Tudor, and Italianate.

During their tenure the Dempwolfs followed trends seen in churches across the country. By architectural history standards there was a time lag between when specific church architecture elements were developed and most popular and when they were used in churches designed by the Dempwolfs. The point is that despite the time lag the Dempwolfs were using the elements anyway. They were bringing styles from larger urban centers nearby, i.e. Philadelphia, New York, Boston, etc. to the smaller cities and rural areas of Pennsylvania and Maryland.

Although the Dempwolfs designed buildings for a variety of religions a majority of the churches were for people of the Protestant faith. This totaled seventy-eight of the eighty-nine buildings, or about 88%. Seven Catholic churches were designed by the firm, or about 8%. Three buildings were non-denominational, or about 3%. One Jewish synagogue was also designed by the firm, or roughly 1%.
Despite the different styles and religious affiliations of the each of the buildings, the Dempwolfs utilized certain design motifs which transcended architectural styles or religious beliefs. These included building elements such as rolling blinds (fig. 14), moveable glass partition walls (fig. 15), wood ceiling vents (fig. 16), and building products like Hummelstown brownstone. They frequently added a European influence to their designs, especially German styles of their home country (fig. 17). The firm also established good working relationships with many local contractors, and used them frequently.

The Dempwolf firm was fortunate enough to have been practicing during a time of economic prosperity, increased interest in the architecture profession, and stylistic changes in church design. By managing these aspects, the firm prospered and became quite prolific in the area. Through design utilizing new styles the firm remained progressive and brought architectural maturity to small cities and rural areas in Pennsylvania and Maryland.
CHAPTER FOUR

A SURVEY OF THE ECCLESIASTICAL BUILDINGS OF THE J.A.
DEMPWOLF ARCHITECTURE FIRM, YORK, PA

The map (fig. 1) includes the central portion of Pennsylvania and northern Maryland. The forty-five churches included in the following survey are labeled on the map. The names, dates of design, and architectural styles of each church which correspond to each number are listed below. The churches are ordered by their design dates. Also denoted on the map, by a red star, is the City of York, PA where the Dempwolf architecture office was located and where fourteen of the churches are located.

1. St. John’s German Lutheran Church – York, PA
   1874 Gothic Revival

2. United Brethren Church – Hanover, PA
   1877 Folk Victorian

3. St. Matthew’s Lutheran Church – Hanover, PA
   (1878) Gothic Revival

4. St. Paul’s Evangelical Lutheran Church – Spring Grove, PA
   1878 High Victorian Gothic

5. St. John’s Lutheran Church – Columbia, PA
   Church: 1881 Gothic Revival
   Sunday school: 1900 Romanesque Revival

6. St. John’s Protestant Episcopal Church – York, PA
   1883 Victorian Gothic
7. Calvary Presbyterian Church – York, PA
   Chapel: 1882 Folk Victorian
   Church: 1884 Romanesque Revival

8. Pine Grove Presbyterian Church – Airville, PA
   1885-86 Folk Victorian

9. Zion Evangelical Lutheran Church – York, PA
   1886 Romanesque Revival

10. Centre Presbyterian Church – New Park, PA
    1886 Romanesque Revival

11. Westminster Presbyterian Church – York, PA
    Church: 1887 Romanesque Revival
    Sunday school: 1891 Romanesque Revival

12. Prospect Hill Chapel – York, PA
    1887 Gothic Revival

13. Brua Memorial Chapel – Gettysburg, PA
    1888 Romanesque Revival

14. St. Jacob’s Union Church – Glenville, PA
    1889 Romanesque Revival

15. Evangelical Lutheran Church Sunday school building – Frederick, MD
    1890 Romanesque Revival

16. Trinity Evangelical Lutheran Church – Chambersburg, PA
    1891 Romanesque Revival

17. St. Mark’s Evangelical Lutheran Church – York, PA
    1892 Shingle Romanesque
18. St. Peter’s Evangelical Lutheran Church – York, PA
   1892 Shingle

19. St. John’s Evangelical Lutheran Church – Steelton, PA
   1892 Romanesque Revival

20. Evangelical Lutheran Church – Red Lion, PA
   1894 Shingle

21. St. Mary’s Lutheran Church – Silver Run, MD
   1894 Tudor Gothic Romanesque

22. Zion Lutheran Church – Hummelstown, PA
   1894 Romanesque Revival

23. Evangelical Lutheran Church – Hellam, PA
   1894 Shingle

24. Evangelical Lutheran Church – Taneytown, MD
   c. 1896 Romanesque Revival

25. St. Paul’s Evangelical Lutheran Church – Carlisle, PA
   Sunday school: 1898 Romanesque Revival
   Church: 1905 Romanesque Revival

26. Evangelical Lutheran Church – Mifflinburg, PA
   1898 Romanesque Revival

27. Union Presbyterian Church – Kirkwood, PA
   1898 Vernacular

28. Calvary Lutheran Church – Dover, PA
   1899 Vernacular
29. First Evangelical Lutheran Church – Carlisle, PA
   1899 Italianate

30. Emmanuel Reformed Church – Hanover, PA
   Sunday school: 1899 Vernacular

ST. JOHN’S GERMAN LUTHERAN CHURCH
(First St. John’s Lutheran Church)

140 W King St | York PA

Date Designed: Church: 1874
Tower rebuild: 1914
Sunday School additions: 1928
Groundbreaking: Church: April 6, 1874¹
Cornerstone Laid: Church: July 12, 1874

A meeting was held on October 27, 1873 by a group of German Lutherans about organizing a church. At that meeting, certain members of the new congregation pledged money to the construction of a church building, including Carl Dempwolf, Sr., the father of J.A. and Reinhardt. A lot was purchased on West King Street (fig. 8) for $9,000 and after the approval of the design of the J.A. Dempwolf firm, work on the 102’ by 57½’ building commenced. Nathanial Weigle was chosen as the master builder and laid the cornerstone on July 12, 1874. By autumn of the next year, the new church building was complete and was officially dedicated on October 17, 1875. The cost of the church building was about $25,000. Adding the land, school, and parsonage, the total jumped to about $40,000.²

Many alterations have occurred to the property which were designed by the Dempwolfs. A new school building was built on the east side of the church in 1888 for

$4,000 (fig. 9). In 1905, the church building underwent renovations which cost about $1,600.\(^3\) In 1914, the church was entirely renovated. Changes included the redesign of the tower.\(^4\) The steeple had been leaning three feet to the south, thus the Dempwolf firm redesigned and lowered the 200’ tower to 120’; construction totals came to $2,060.\(^5\) Finally in 1928, additions to the Sunday school were designed by the firm and built.\(^7\) These additions left only the original east wall of the school standing; the building was expanded in the other three directions. The auditorium, remaining on the second floor, could then become a larger room, and the school rooms, which remained on the first floor, gained an additional classroom.\(^8\)

\(^8\) St. John's Evangelical Lutheran Church, 1975.
The brick church building is designed in the Gothic Revival style (fig. 2). As the church stands today, the front (north) façade is divided into three bays (fig. 4). The left and right bays are symmetrical and include a large pointed-arch, lancet-shaped stained glass window. An arched corbel table steps up the gable roof line. The center bay projects forward of the rest of the façade and includes the tower with front entrance. Originally a five-stage tower, it was later reduced to three stages. Above the entrance is a stone inset panel which states: “Deutsche Ev. Luth. St. Johannis Kirche. U. A. C. 1874.” The side (west and east) elevations are identical and are divided into six bays by brick piers (fig. 5). The northernmost bay is blind while the other five bays have lancet-shaped windows. All bays include arched corbel tables similar to that on the front façade. The rear (south) elevation is plain with a central two-story annex and a one-story appendage on either side. The two-story portion is composed of a round stained glass window. The appendages both include a single double hung window within a bricked-in gothic arch. The eastern appendage is more modern than the rest of the building and only has a parapet to hide mechanical equipment.
The interior of the church was originally described as being able to hold eight hundred people. The seats were arranged in six tiers with three aisles leading to the altar on the south wall. The church still retains ample seating which is divided by three aisles. A tiered balcony surrounds the sanctuary on three sides.

The north portion of the balcony is used to house the organ (fig. 7). The altar is positioned in a gothic-arched apse (fig. 6).

Fig. 8. The 1887 Sanborn map shows the Dempwolf-designed church building (Sanborn Fire Insurance Map. "140 W King St, York, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1887.).

Fig. 9. The 1908 Sanborn map shows small changes to the church building and a new Sunday School building (Sanborn Fire Insurance Map. "140 W King St, York, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1908.).

UNIVERSITY UNTED BRETHREN CHURCH

125 Broadway St | Hanover PA

Date Designed: c. 1878
Date Dedicated: July 1879

After the first church burned in 1878, the pastors decided that they should rebuild on the same site. The congregation continued to grow and in 1913, they vacated the

---

building for a larger church.³ This Dempwolf church then became the home to a series of retail stores and continues to operate as a commercial building to this day (fig. 2-3).

The brick church building was designed in the Arts and Crafts style (figs. 1, 5). The street-facing (west) elevation is the principle elevation. Originally, the cross gable featured a large gothic-arched window and exposed trusses. This bay was flanked by pairs of arch-topped windows. A small bell tower also dominated this elevation. Currently, the west elevation is dominated by a large, divided-lite store front. The exposed trusses have been removed and a round window replaces the top portion of gothic window. The bell tower has also been removed.

The south elevation was originally the main entrance. A projecting, gabled vestibule housed the front door and was flanked by a pair of arch-topped windows. A Reuleaux triangle window surmounted the vestibule below the exposed trusses along the caves.

³ Hanover Public School District, 2008.
Currently, very little of the west elevation can be seen as a building now abuts this elevation, however the Reuleaux triangle window and exposed trusses can still be seen.

The north elevation included a projecting addition with shed roof which held the altar. The side walls each included a single arch-topped window and the projection was flanked by a pair arch-topped windows and a pair of brackets supported the shed roof. Today, the projection still exists, but a new window punctures the north elevation. The flanking windows have been bricked in, but the brackets still can be seen supporting the roof.

The interior of the church included one large room in a typical basilica plan with a center aisle and flanking pews on either side. Today the room has been split in half, with a loft above a set of rooms on the east elevation. Original exposed trusses can still be seen supporting the roof (fig. 4).

ST. MATTHEW’S LUTHERAN CHURCH
(St. Matthew’s Evangelical Lutheran Church)

30 W Chestnut Street | Hanover PA

Date Designed: 1878
Cornerstone Laid: August 3, 1878
Date Dedicated: lecture room: February 2, 1879
                                 auditorium: November 20, 1879
Date Demolished: 1972

Planning for the new church, which would be the fourth church building on the site, began in the spring of 1878, after a fire partially destroyed the previous building the year before. After several proposals for improvement, enlargement, or remodeling of the harmed structure, a resolution to build a new 115’ by 60’ building was passed. The building committee appointed J.A. Dempwolf as the architect.¹

After the former building had been sufficiently dismantled, construction began on the new brick church. Although originally designed to include a new tower (fig. 10), the spire of the third church was retained on the east elevation (fig. 1). The cornerstone for the fourth church was laid on August 3, 1878. Seven months later, on February 2, 1879, part of the building was ready for dedication. By November 20 of the same year, the rest of the building was dedicated. The entire cost for the construction of the building and its

¹ (St. Matthew’s Evangelical Lutheran Church, Hanover, PA. Memorial Volume of the Sesqui-Centennial Services in St. Matthew’s Evangelical Lutheran Church, Hanover, PA, November 19-26, 1893. York, PA: York Daily Print, 1893.)
furnishings was about $22,000. In 1892 and 1893, improvements were made to the spire.²

The Dempwolf building was built in the Gothic Revival style. Exemplary elements of this style include the steeply-pitched roof, decorative dormers with stylized vergeboards, the gable end walls extending uninterrupted to the roofline and pointed arches above window and door openings.

The front elevation was symmetric and was divided into three bays by stepped buttresses (fig. 3). The center bay included a recessed entrance porch with three successive gothic-arch surrounds on the first-floor, a series of five tall, thin, and round-arched windows on the second level, and a rose window above those. The two outside bays were mirror images of each other. Three staggered, arched fixed windows flanked either side of the entrance on the first floor, gothic-arched lancet-shaped windows were located on the second level. String courses separated the floor levels vertically, arched corbel tables were located under the eave, and pinnacles were located at the peak and at each corner of the gable roof.

² St. Matthew’s Evangelical Lutheran Church, Hanover, PA, 1893.
The side elevations were divided into six bays by brick piers (fig. 2). The northernmost bay included three low-arched fixed windows, similar to those seen on the front elevation, but follow the stair rise. The following five bays were identical and included a two-over-two low-arched double-hung window on the first floor and a larger round-headed stained glass window on the second floor. Arched corbel tables, similar to those found on the front elevation, were seen under the eaves. Four dormers, decorated with lancet-shaped vergeboards, were placed evenly across the roof (fig. 4).

The interior of the church was also designed in the Gothic Revival style. The first floor included a vestibule with a pair of staircases on either side, two libraries, a bible class room, adult school room, and infant school room. The second floor included the main sanctuary, in an auditorium plan, incorporated four aisles separating three rows of pews. Three gothic arches spanned the altar wall of the sanctuary; the center arch being open to the apse (fig. 5).
A fifth church building was constructed in 1924 (fig. 9) at which time the Dempwolf-designed church became the Sunday school building (fig. 6). It was used for this purpose until the building was torn down in 1972 for a new fellowship hall.3

ST. PAUL’S EVANGELICAL LUTHERAN CHURCH

201 S Main St | Spring Grove PA

Date Designed: 1878-79
Cornerstone Laid: June 2, 1879
Date Completed: Spring 1880
Date Demolished: 1906

St. Paul’s Evangelical Lutheran Church was established in the fall of 1878. The suggestion of a new church building was brought up and supported, especially by Mr. and Mrs. P.H. Glatfelter, friends of the Dempwolf family. A building commission was appointed and two lots were secured at the southeast corner of Main and Church Streets.

---

Construction began in the spring of 1879, with the cornerstone laid on June 2 of that year. The building was completed in the spring of 1880. The church included a foundation of blue limestone supporting walls of local brick and decorative elements of Ohio-stone. The interior was finished with butternut panels. The 450-seat church cost $13,200 to build.

The church was only used until 1906 when a new church building was designed and completed in 1908 at the same location. Various redecorating schemes occurred, a couple led by the Dempwolfs in 1927. These included redecoration of the nave, organ, baptismal front, reredos, and other small additions.

The Dempwolf church building was designed in the High Victorian Gothic style. The exterior of the church included many of the characteristics described above. Included were: sweeping, but steep gabled roofs; asymmetry; multiple entrances, including a porte cochere for carriages; stringcourses of different patterns and materials than the brick walls; gothic-arched window and door openings; and exposed rafter tails (fig. 1). The base of the building was constructed of blue limestone, and the stringcourses of Ohio-stone contrasted with the red brick native to the area.

---

5 St. Paul’s Lutheran Church, 2009.
7 Emig, et al., 1981.
8 Houghton, Osgood & Co., 1879.
The interior of the church (fig. 2) was laid out into three major rooms: a Sunday school room, an infant room, and the auditorium. The wall separating the Sunday school room and the auditorium was constructed of movable glass partitions. In front of the altar in both rooms were pews, split in half by center aisles.

Original drawings, undated (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.). Fig. 2, above. Left to right: Foundation Plan, First Floor Plan. Fig. 3, below. Left to right: Rear (East) Elevation, North Elevation.
Founded in 1881, the congregation immediately planned to build a new church. J.A. Dempwolf was hired as architect and Jacob Sneath was named contractor with a bid of $5,600. The groundbreaking ceremony was held on July 11, 1881, and the congregation
members began the arduous task of hand-digging the foundation. Exactly five months later, on December 11, 1881, the cornerstone was laid. The building of the church then commenced swiftly and was dedicated on October 1, 1882.¹

Designed in the Gothic Revival style, the church was a simple rectangular brick structure measuring 40’ by 86’ (fig. 4). The symmetric front (north) elevation included the main entrance under a front-facing gable (fig. 8). The center bay included an arched double door with gothic-arched window above. This bay was flanked by pairs of gothic-arched windows. Exposed rafter tails along the roof led to a pinnacle at the apex of the gable. A short steeple could be seen on the western corner of this elevation. The west elevation was composed of five bays, the centermost falling under a projecting cross gable which included a large gothic-arched window with tracery (fig. 8). The northernmost bay included a pair of narrow, round-arched windows and the remaining three bays each included a single round-arched window. Two vents pierced the roof on this elevation as well. The rear (south) elevation was composed of the projecting polygonal apse. Although very plain, brick string courses, arc-topped doors and windows, and a Reuleaux window decorated this elevation.

The interior of the church was composed of one main level and a balcony.

(fig. 7). From the main entrance, one entered into a vestibule. To the right were stairs to the tiered balcony and a coat room. To the left was an infant school room which, along with the vestibule, opened into the auditorium. The altar resided under a round-arched apse, a majority of which was used as the choir gallery. Stairs to the west of the apse led to a basement-level vestry.

After another lot was purchased in 1890 and overcrowding became a problem, particularly at Sunday school services, the church decided to build a Sunday school chapel addition. Once again, the Dempwolf firm was hired to design the new chapel. In the spring of 1893 excavation began. A year and a half later, on September 23, 1894, the chapel was consecrated. The chapel addition was located at the southwest corner of the church building (figs. 5-6) and was designed in the Romanesque Revival style (fig. 9).

The front (west) façade of the chapel included a new bell tower and a paired gable facade. In the drawings, there were two proposals to the tower height. The first was a tower which incorporated six stages. The second proposal capped the tower after one stage in order to build the remaining five stages at a later time. Unfortunately the tower was never built to its full height. The paired gable façade was symmetric and each gable wall was identical. These walls were a large, round-arched window with pairs of round-arched double-hung windows flanking each side. Between the gables was another double-door entrance. Exposed rafter tails decorated the roof edge and a pinnacle resided on the southernmost peak. A skylight could also be seen from the west elevation which gave light into the larger Sunday school room. The south elevation of the chapel addition was composed of a series of round-arched double-hung windows.

\[2\] St. John’s Evangelical Lutheran Church, 1981.
A new vestibule addition was also proposed for the front (north) elevation of the original building (fig. 9). This was never built.

Upon entering the chapel addition through the main entrance doors, one entered a small vestibule (fig. 9). To the front was the main Sunday school room with a small altar. Along the east wall of this room were two small classrooms divided from each other and the auditorium by moveable glass partition walls. To the left (north) of the entrance vestibule was an infant school room which incorporated shallow tiered seating and was separated from the auditorium by movable glass partitions. A second entrance to this room was through the tower vestibule located at the rear of the room.

By the end of the nineteenth century, the church decided to make further improvements to the building (figs. 1-2). These changes included “additional pews, a new pulpit and altar rail, new windows and chandeliers. A vestibule was constructed at the front door, and frescoing added to the beauty of the interior.”3 This renovation was completed in 1900.

---

3 St. John’s Evangelical Lutheran Church, 1981.
The idea of building a new church was proposed in 1924 and approved. The last service held in the Dempwolf church was on February 27, 1927. It only took one month for the old church to be razed (fig. 3) and the groundbreaking ceremonies to occur for the new church (fig. 6).

Fig. 4, top. The 1886 Sanborn map shows the church as originally built (Sanborn Fire Insurance Map. "23 S 6th St, Columbia, PA." Pennsylvania State University Maps Library. ST. JOHN’S PROTESTANT EPISCOPAL CHURCH
(St. John the Baptist Episcopal Church)
140 N Beaver St | York PA

Date Designed: 1882
Date Dedicated: April 16, 1883

The land on which the current building stands was procured in 1769 and the first church was erected the same year. In 1810 (when a gallery was added), 1850, and 1865 the building was renovated, increasing to more than twice the original size.¹ On September 15, 1882 it was decided that a fourth enlargement to the church needed to occur. The expansion plans submitted by the J.A. Dempwolf firm were approved as long as it did not

cost more than $5,000. Only remnants of the original colonial church remained once the construction was complete, which was dedicated on April 16, 1883.2

The chapel was redesigned in the Gothic Revival style (fig. 1). The front (east) elevation is symmetric (fig. 2). With the addition of a second transept-like structure at the tower (east) end, “this completely transformed the façade by flanking the original mid-Victorian Gothic tower into two gabled extensions.”3 The tower has four stages. The first stage includes a double door under a Queen Anne-detailed porch. The second stage holds a large gothic-arched window with tracery. Above this window is a date stone reading “St. John’s, Founded 1769, Rebuilt 1850-62, 1883.” Separated from the lower stage by a string course of sandstone, the fourth stage incorporates paired gothic-arched vents on each side with projecting brick corbels. The top of the tower is finished with stepped parapets. The front-facing gables contained a new

---

2 Gibson, 1886.
entrance with another Queen Anne-detailed porch to the north-side aisle (fig. 3) and three lancet-shaped windows over the south-side aisle.

The north and south side elevations were identical (fig. 8). These facades were composed of two projecting cross gables (fig. 4). These sections included a set of three gothic-arched windows surmounted by a Reuleaux window. Between the cross gables is a wall including seven successive small, gothic-arched windows. Two small dormers are located at the roof level.

In the interior of the church (figs. 5-6), the Dempwolf expansion included the addition of wider aisles which meant that the original north and south walls had to be removed. These walls were replaced with “load bearing, cast iron columns with striking quasi-Romanesque style capitals.” The nave ceiling was removed and the
rood beams were exposed to give height to the interior. The new side walls included seven lancet-shaped windows each (fig. 7). The sanctuary features four columns of pews separated by three aisles. The transept also houses pews, but these are perpendicular to the altar. The chancel area was altered to include a window at the high altar.4 Two rooms are located on either side of the altar.

CALVARY PRESBYTERIAN CHURCH

Formerly at: S. Duke St. & E. Boundary St. | York PA

Date Designed: Mission Chapel: 1882
Chapel enlargement: January 1884
Church: December 1884
Groundbreaking: Church: May 25, 1885
Cornerstone Laid: Church: July 21, 1885
Date Dedicated: Mission Chapel: November 19, 1882
Church: February 16, 1886
Date Demolished: c. 1971

The formation of Calvary Presbyterian occurred in August of 1882 with the organization of a Sunday school. Samuel Small, Sr., the philanthropist who encouraged the organization of the Dempwolf firm, donated the corner lot on the East side of South Duke Street in order to build a new chapel building. The Mission Chapel was built through the
efforts of Samuel Small, II. The white frame building was dedicated on November 19, 1882, shortly after the congregation was formally inaugurated.\(^1\) The 250-seat chapel cost $2,500 to build.\(^2\)

Originally small, the Mission Chapel was designed in the Folk Victorian style (fig. 5). The front (west) façade of the chapel included a front door set to the northern side and three evenly-spaced, double-hung windows. Simple wood siding sheathed the exterior and horizontal wood bands ran under the windows and at the bottom of the front-facing gable roof. The gable portion included three vents and was sheathed in wood shingles. A small wood cupola surmounted the roof at its peak. The side (north and south) elevations were nearly and included six evenly spaced windows similar to those on the front elevation. The south side elevation included a door in place of one of the windows. The rear elevation included two windows.

Upon entering the chapel through the main entrance, one entered a vestibule. To the south was a tiered school room. It was separated from the main room by a series of movable glass partitions. East of the vestibule and school room was the main room with an altar. Behind the altar were two more classrooms that were also separated from the main room by moveable glass partitions.

In 1884, the chapel was enlarged with plans supplied again by the Dempwolf firm (fig. 6). Additions were made to the south elevation and the southeast corner and continued in the Folk Victorian style. The plan of the original portion remained mostly the same, although the altar was moved along the northern wall. The addition to the southern side

---

included a tiered classroom separated by moveable doors. The addition to the southeastern corner was another tiered classroom. Further alterations and additions were made to the chapel in 1889 and 1891. After all of these changes occurred the Mission Chapel housed a main room, ten classrooms, and a kitchen.³

Just after the first enlargement to the Mission Chapel occurred the Dempwolf firm was enlisted once more to design a church building for the congregation (fig. 2). The groundbreaking ceremony was held on May 25, 1885 and the cornerstone was laid on July 21, 1885. By February 16, 1886 the church was finished and was dedicated.⁴ The church was “constructed of rough-cut limestone with sandstone trimmings”⁵ and was designed in the Romanesque Revival style (fig. 7).

The front (west) elevation included an 85’ entrance bell tower and a front-facing gable (fig. 3). The tower was three stages. The first was composed of stone and included a projecting Victorian porch, the second was composed of brick, and the third stage was a steeple setting atop wood details. Details on the gable end included a large, round-arch window with heavy brick arches, sandstone stringcourses, and round-arched vents at the peak.

---
³ Calvary United Presbyterian Church, 1976.
⁴ Ibid.
⁵ Ibid.
The north elevation included the tower at the western end, a rear entrance at the eastern end, and two round-arched windows with heavy brick arches in the side wall of the sanctuary. The south elevation included a round-arched window with heavy brick arches at the western and eastern edges and a projecting round appendage which houses the apse. This appendage was complete with a series of five small, round-arched windows and a conical roof line.

The interior of the church was one large room. The sanctuary sat 425 people, had a sloping floor, no center aisle, a round pew plan, no balcony, dark woodwork, six stained glass windows, and a choir loft in the raised niche behind the pulpit. Organ pipes covered the semi-circular niche behind the choir loft (fig. 4).  

Major repairs to the building occurred in 1949. In 1968, Calvary Presbyterian united with another congregation in York and moved across town. On July 4, 1971 the former property was sold and subsequently the buildings were demolished.

PINE GROVE PRESBYTERIAN CHURCH

4263 Delta Rd | Airville PA

Date Designed: 1885-86
Cornerstone Laid: April 21, 1886
Contractor: Richard Ruff
Date Dedicated: August 10, 1886

In 1885 the Pine Grove Presbyterian congregation decided to build a new church rather than renovate their 1857 church building. On November 30, 1885 the congregation commenced to begin digging the foundation, originally 40’ by 50’ (fig. 7). Twelve days later the J.A. Dempwolf firm was hired to design a church and supply construction drawings. The foundation was increased to 40’ by 55’ at this point (fig. 6). On March 27, 1886 the job

of contractor was awarded to Richard Ruff for the bid of $2,110. The cornerstone was laid on April 21, 1886, and using the lumber from the wooded lot it only took three and one-half months to complete the church. It was dedicated on August 10, 1886 for a total cost of $3,100.2

Pine Grove Presbyterian was designed in a Folk Victorian style (fig. 6). The exterior of the church was originally clad with wood siding and incorporated a hipped slate roof (fig. 1). The front (west) elevation is symmetric with two double-door entrances under stoops on the north and south corners. Between these entrances is a projecting gable with a large round-arched window. A small Victorian bell tower can be seen at the west end of the hipped roof (fig. 2).

The side (north and south) elevations are identical and simple (fig. 3). Three pairs and one single double-hung window run the length of these elevations underneath the exposed rafter tails of the roof.

---

Originally, the rear (east) elevation was very plain and only included a rear entrance door. In 1915, the session room to the rear of the church was added (fig. 3). This addition is unrelated to the Dempwolf design. In 1982, the cladding was replaced with brick veneer and entrances were added to the rear of the building.

The interior of the church consists mainly of one large room (fig. 4). Originally there were three columns of pews divided by two aisles. The side columns of pews were placed at a slant toward the altar. The chancel is in the center of the east wall. Originally, a sexton’s room was located to the north side of the altar. This has been opened up and now holds the choir. The original vestry to the south of the altar is unchanged. In early 1969, the interior of the church was renovated. “The ceiling was lowered (fig. 5). New carpet, light fixtures, pews, and pulpit furniture were purchased and installed.”

ZION EVANGELICAL LUTHERAN CHURCH

36 S Duke St | York PA

Date Designed: façade and interior alterations: 1886
Contractor: Samuel Gotwalt
Date Dedicated: May 22, 1887

The church building was constructed on the site between 1850 and 1851 and was dedicated on June 13, 1851.¹ This building measured 72’ by 52’ wide, and included a basement for Sunday school purposes. The final cost was $6,800 and was dedicated as Zion

Evangelical Lutheran Church. In 1869 a 25’ addition was added to rear of the church building which included a recess for a new pulpit, library, and pastor’s study. The auditorium was enlarged to a seven hundred-person seating capacity. Also at this time, the interior of the church was “modernized and beautified.”

The brick church building was further improved and remodeled in 1887, 1905, and 1914.

The 1887 renovation was done at the hand of the J.A. Dempwolf Firm (fig. 1). To the exterior, changes included a new front (east) façade and the addition of the bell tower. Renovations to the interior included combining the lecture room and the infant Sunday school room, combining the Men’s Bible Classroom and the library, rebuilding the second-floor organ and moving it to the balcony, and new pews. These changes were dedicated on May 22, 1887. Final figures March 30, 1888 put the cost of renovation at $16,182.31.

---

The original façade was in the Greek Revival style (fig. 2). The north, south, and west elevations retain many original Greek Revival elements while the facelift to the front elevation was a modernization in the Romanesque Revival style (figs. 3, 11).

The Dempwolf façade is separated into three bays by brick piers. The four-stage brick tower in the south bay impresses the idea of asymmetry. Each stage is different and is separated by a brownstone stringcourse. The center bay includes a projecting entrance with two wooden double doors (not original) in ribbon arches separated by a column (fig. 4). The brownstone-detailed arches spring from botanical brownstone sills (fig. 5). Above the entrance, on the second floor, is a row of four round-arch stained glass ribbon windows and a stained-glass rose window. The north bay includes arched stained-glass windows with heavy brownstone sills, brownstone quoins, and brownstone arch details.

---

4 Lang, 1983.
The front-facing gable is accented with an arched corbel table. The edge of the roof is detailed with a brownstone roll molding, the peak is decorated with a round brownstone finial, and the north gable corner carries a brownstone pinnacle.

The interior of the building retains most of the Dempwolf features. The entry vestibule at the east end is flanked by two sets of stairs leading to the second floor. Also on the first floor is a large room which can be subdivided by moveable glass partition walls. Cast iron columns can also be seen throughout this room (fig. 6). The second floor which holds the main sanctuary has a landing with three sets of double doors that lead into the worship space (fig. 13). Originally the auditorium would have had pews separated by two aisles; the left and right columns of pews were angled towards the altar at the west end of the building (figs. 7-8).
In 1941, an addition to the rear (west) of the building was approved. On January 6, 1942, the addition, designed by Dempwolf-protégé Harry Lenker, was dedicated. The building was used by the congregation until 1995 when it was sold to the County of York. The building was used for storage until an adjacent church, Christ Lutheran, purchased the property with plans to renovate the building for many uses.

Fig. 9, top. The 1887 Sanborn map shows the church during renovation. The vestibule is not yet built (Sanborn Fire Insurance Map. "36 S Duke St, York, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1887.). Fig. 10, bottom. The 1908 Sanborn map shows the church finished (Sanborn Fire Insurance Map. "36 S Duke St, York, PA." CENTRE PRESBYTERIAN CHURCH

83 New Park Rd | New Park PA

Date Designed: December 1886  
Cornerstone Laid: June 9, 1886  
Contractor: Nathaniel Weigle  
Date Completed: March 27, 1888  
Date Dedicated: April 25, 1888

In late 1882, the new pastor appointed to Centre Presbyterian Church sketched alteration ideas for the existing building and drawings of a new church building. After discussing matters with members of the congregation, it was felt that even though they needed a larger church, no one wanted to demolish the old building. At the Board of Trustees and Manse Building Committee session on September 17, 1885, it was decided to
design a new building that would be ready for use on September 1, 1887. Also at this meeting, drawings submitted by the J.A. Dempwolf firm were hung on the wall, which persuaded the committee. On April 23, 1886, a lot was chosen and the Dempwolfs were awarded the design. On August 17, 1886, J.A. Dempwolf and B.F. Willis, another architect, met at the site to stake off the new building; thirteen days later, ground was broken.¹

On January 27, 1887 Nathaniel Weigle, J.A.’s former employer, was awarded the contract to build the new church for $8,285. On May 16, 1887 work began on the new building and the cornerstone was laid on June 9 of the same year. The new church building was not completed by the date first hoped for. Rather it was completed on March 27, 1888. The total cost came to $14,881.45 and was dedicated on April 25, 1888. The difference in final cost was due to change orders from the congregation: “stone was used in the construction of the walls instead of brick. Brownstone sills were placed in windows and doors instead of wood and brownstone coping added to buttresses and gables. A steam heat plant was installed instead of hot air, and elaborate stained instead of plain colored glass was used in the windows.”²

The stone church was designed in the Richardsonian Romanesque. Each façade is different and asymmetric (fig. 1).

¹ Clark, R. Lorenzo. History of Centre Presbyterian Church, Mew Park, PA, 1790-1903. Lancaster, PA, 1903.
² Ibid.
The front (west) elevation includes a front porch which stretches across most of the front wall. It is surmounted by a large dormer window with a brick arched window. On the northern corner is a porte cochere that had been used for carriages but now houses a handicap ramp. On the southern corner is a three-stage bell tower. The north elevation incorporates a series of large round-arched windows, brick accents, and an octagonal projection on the east corner. The rear (east) façade is plain compared to the other elevations with a pair of three double-hung windows and a dormer. The south elevation is similar to the north façade (fig. 2).

The interior of the church is one level and is divided into two main areas (fig. 6). The first area is the large auditorium. It is entered from vestibules on the north and south corners of the west façade. The angled pews are divided by two aisles which slope down to the altar on the east wall of the auditorium. The pews are original (fig. 8). A choir sits to the north of the altar. The ceiling of auditorium rises to the ribbed vaulting and a large wooden vent (fig. 3-4).

Fig. 3, above. The auditorium includes angled pews which slope down to the altar (Photo by author). Fig. 4, below: The ceiling rises to roof height and incorporates wood ribs and a large wood ceiling vent (Photo by author).
The second area of the interior is the Sunday school area which is located behind the altar. It includes a large Sunday school room in the center, a smaller bible classroom to the south and a small infant classroom to the north which are divided by moveable glass partition walls (fig. 5). Another room, formerly the Minister’s office is located beside the bible classroom.

Fig. 5. The Sunday School portion of the building includes three main rooms which are divided by moveable glass partition walls (Photo by author).

WESTMINSTER PRESBYTERIAN CHURCH

320 N Queen St | York PA

Date Designed: Church: May 1887  
Renovations and Sunday school: August 1891
Cornerstone Laid: Church: June 30, 1887
Contractor: Church: Jacob Seachrist
Date Completed: Sunday school: Winter 1892
Date Dedicated: Church: December 15, 1887

The Westminster Presbyterian congregation was formed on March 14, 1887. Through the donation of Sallie Small, niece of philanthropist and Dempwolf family friend,
Samuel Small, Sr., a church was built.\textsuperscript{1} Drawings were prepared by the Dempwolf firm in May of 1887\textsuperscript{2} and by June 30 of the same year the cornerstone was laid.\textsuperscript{3} Construction, awarded to Jacob Seachrist,\textsuperscript{4} continued rapidly and the finished church was dedicated on December 15, 1887.\textsuperscript{5}

The church was designed in the Romanesque Revival style. The exterior of the building is asymmetrical and is constructed of limestone (fig. 2). A large hipped roof with windows in a clerestory level gives the building further mass distinction. The front (east) façade incorporates a five-stage bell tower at the south corner. The top three stages are built of wood with clapboards. The bottom stage includes the main entrance. The front façade also incorporates a pair of three

\begin{footnotesize}
\begin{itemize}
\end{itemize}
\end{footnotesize}
stained-glass, double-hung windows. The south elevation includes a series of paired stained-glass, double-hung windows and a rear entrance. The clerestory can be readily seen on this elevation (fig. 1).

The interior of the church is plain. Beyond the main entrance is a vestibule and to the left is a small room which most likely would have been the minister’s office. To the right of the vestibule is a Sunday school room that originally would have been separated by the main auditorium by moveable glass partitions, which no longer exist (fig. 3). The main auditorium includes pews divided by three aisles. The outermost columns of pews are angled towards the altar on the west wall. This wall incorporates three gothic-arch niches which have been altered (figs. 4-5). The stained-glass clerestory windows can be seen in the main auditorium space (fig. 3).

In August 1891, the Dempwolfs were again employed by the Westminster congregation to develop plans for a Sunday school addition to the rear of the church.
building and renovations to the existing church (fig. 6). These changes were performed during the winter of 1891-92. The exterior of the addition has changed little however the interior has been altered. These changes may have occurred in 1958-59 when various small renovations occurred in the interior of the building. 

Fig. 6. The 1908 Sanborn map shows the 1887 stone church with wood steeple and 1892 brick Sunday school addition to the rear (Sanborn Fire Insurance Map. "320 N Queen St, York, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1908.).

6 York County Heritage Trust 34195, n.d.
PROSPECT HILL CHAPEL

700 N George St | York PA

Date Designed: June 1887
Date Dedicated: November 22, 1888
Date Demolished: 1981

The Chapel was built at Prospect Hill Cemetery to be used for funeral services.¹ In 1887, the cemetery hired the Dempwolf firm to design a mortuary chapel.² In November 1888 the chapel was completed and it was dedicated on the 22nd of that month.³

Constructed of rubble limestone with brownstone trimmings and tile roof, the church was designed in the Tudor Revival style (fig. 1).⁴ The front (south) elevation was

---
symmetric and incorporated a projected front-facing gabled porte cochere with centered limestone bell tower. Single gothic-arched windows with tracery flanked the central features. The west and east side elevations and rear (north) elevation were very similar and included projecting, gabled central bays with gothic-arched windows. The rear elevation featured a basement entrance.

The interior of chapel consisted of two floors (fig. 2). The basement level was mostly unexcavated, but the southern portion had a crypt with four stone slabs, a morgue, and a furnace room. These areas could only be accessed from the exterior door on the south elevation. The ground-floor level consisted of a single auditorium room with a platform at the south end. The trusses were exposed and included many decorative wood pieces (fig. 3).

After being closed due to vandalism prior to 1979,5 it was eventually demolished in 1981 after falling into disrepair. The area is now used for burials.6

BRUA MEMORIAL CHAPEL
(Kline Hall)
Gettysburg College campus | Gettysburg PA

Date Designed: 1887-88
Cornerstone Laid: Spring of 1888
Contractor: William A. Slagle
Date Dedicated: Fall of 1889

At a board and faculty meeting on September 27, 1887 the plans for a 162’ x 69’ building, submitted by the J.A. Dempwolf firm, were approved. These plans included a 143’ tower and seating for four hundred-plus people. In January of 1888, William A. Slagle of Hanover, PA won the contracting bid for $77,457. The cornerstone was laid in the spring of
1888 and was completed in the fall of 1889. A large addition to the south side of the building was built in the 1980s.

The brick and brownstone-trimmed building was designed in the Richardsonian Romanesque style incorporates a cross-gabled roof and has an entrance at each of the four corners. The front (east) façade (fig. 1-2) includes a front-facing gable with arch- and flat-topped windows. A six-stage tower, with brownstone decorations (figs. 3-4), is located in the original southeast corner. The addition now extends past this point and has a series of round-arched double-hung windows. The rear (west) elevation is very similar, but does not include a tower.

The south elevation includes a front-facing gable with three round-arched

---

windows and the tower at its eastern corner. The north elevation includes a semi-circular projection with windows surrounding (fig. 5).

The interior was originally composed of two rooms (fig. 9). The smaller room, or Morning Chapel, on the north end of the building, had been separated from the bigger auditorium room by moveable glass partition walls (fig. 8). Both rooms were sloped down towards the platform stage located on the south end of the building. A balcony was located on the east side of the auditorium and a vestry and organ were located to the west of the platform. Currently the building is used as a theatre. The interior has been stripped of the moveable glass partitions, balcony, and original seating, and the stage has been extended into the seating area. The addition includes backstage areas on the ground floor and offices on the basement level.

Fig. 5, above. The north elevation today (Photo by Author). Fig. 6, below. A photograph of the interior, circa 1890 (Brua Chapel, ca. 1890, GettDigital: Historic Gettysburg Photographs, Special Collections/Musselman Library, Gettysburg College, Gettysburg, Pennsylvania, January 31, 2010, http://gettysburg.cdmhost.com/cdm4/item_viewer.php?CISOROOT=/p4016coll11&CISOPTR=1121&CISOBOX=1&REC=3).
Fig. 7. Original drawings, dated December 5, 1888; clockwise from bottom left: Rear (West) Elevation, South Elevation, North Elevation, Front Elevation (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
Fig. 8. Original drawings, dated December 5, 1888. Clockwise from bottom left: Transverse Section looking South, Section through Platform looking West, Section through Morning Chapel looking South, Longitudinal Section looking East (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
Fig. 9. Original drawings, dated November 22, 1888. From bottom: First Floor Plan, Gallery Plan, Foundation Plan (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
After the previous church was damaged by lightning, and on the advice of J.A. Dempwolf, it was decided to build a new church building on the rural site of the old building.¹ On May 27, 1889 it was decided: an architect was to design the building; it was to

built of brick and have a slate roof and stained glass windows; the bell tower was to be one hundred feet tall; there was to be no basement and no gallery; it was to hold one thousand people, have an inclined floor, and be heated; a glass partition was to separate the Sunday School and singing school room from the church and auditorium. Because they wanted to build and incorporate the church immediately, the building committee began preparations without delay. Estimates for construction of the brick building were between $16,000 and $18,000.²

After the approval of the design from the J.A. Dempwolf firm, work on the new brick and Hummelstown brownstone building began in 1889 with the cornerstone laid on August 4 and being under roof by November 17 of that year.³ It was occupied in spring of 1890 for the price of about $18,000. After all debts were paid, the church was formally dedicated on May 13, 1894.⁴

The building was designed in the Romanesque Revival style and

---

² Glatfelter, Charles H. A History of St. Jacob’s (Stone) Church, 1756-1956, 200th Anniversary.
³ Stump and Anstadt, 1925.
incorporates a squat bell tower with Victorian porch on the northeast corner, cross gables, and round-arched stained-glass windows (figs. 1-3). A large addition has been added to the western elevation.

A historic photograph of the interior shows pews arranged in an arch and angled down to the altar, a ceiling outlined in wood ribbing, and round-arched niches for the organ and other entrances (fig. 4).

Fig. 4. An historic photograph of the interior of the church from the 175th Anniversary in 1936 (Miller, F. Donald. Brodbecks and Green Ridge, Nearly Forgotten: Two Early Pennsylvania Villages. Glenville, PA: unpublished book, 2005.).
After making the decision to build a Sunday school, two proposals were laid before the Evangelical Lutheran Church building committee. The first was as an addition to the existing building, the second, by the Dempwolf firm, was for a separate structure. The

---

Dempwolf proposal was chosen.\textsuperscript{2} The plan included five rooms: a main room covering 3,500 square feet and accommodating five hundred adults; an infant room for 250 children; two bible classrooms for twenty five people each; and a library. The maximum cost for the new building was set at $10,000. The cornerstone was laid on June 29, 1890.\textsuperscript{3} It was dedicated on September 27, 1891.\textsuperscript{4} The main room measured 50’ x 72’ and the infant room measured 30’ x 40’. The end cost totaled $15,700.\textsuperscript{5}

Originally the Romanesque building was composed of four rooms: an infant school room to the north, a main auditorium to the south, and two small semi-circular classrooms at the west and east walls of the main auditorium (fig. 8). The infant school room and the classrooms were separated from the main auditorium by movable glass partition walls. Both rooms slope downwards to the pulpit which was flanked by a vestry

\textsuperscript{4} Reinberger, n.d.
\textsuperscript{5} Wentz and Reinberger, 1988.
room to the east and an organ space to the west. The interior spaces included vaulted ceilings with exposed wood trusses.

The exterior of the building was designed on a cross-gabled plan (fig. 7). The front (north) elevation was symmetric and included a gable wall with round-arched windows flanked by entrances on both sides. The semi-circular classrooms are expressed on the exterior of both sides of the building from the front elevation. The original design was altered to include a four-stage bell tower on the northwest corner entrance (fig. 9). The side (west and east) elevations were very similar except that the west elevation included the tower. These elevations included a front-facing gable with projecting semi-circular class room space. Groups of three arch-topped stained-glass windows were placed along these elevations. The rear (south) elevation retains much of its original design (fig. 3). It is also symmetric and includes a front-facing gable wall with two front-facing gable projections on the corners. A shed roof shelters the altar between these projections. Groups of three arch-topped stained-glass windows are also along this elevation.

Many additions and renovations have occurred to the building. In 1912, two wings were added to the building, to the north and the east, at a cost of $12,000.\(^6\) These additions formed the northern and eastern footprints that can be seen today, including moving the north wall to the edge of Second Street (fig. 1). In 1925, a wing was added to the west at a

cost of $7,600. This addition mimicked the addition that had been added to the east elevation (fig. 2).

In 1970, the architecture firm of C.F. Bowers, with general contractor Floyd L. Culler, Inc. renovated the building. The cost totaled about $300,000. In 2007, the most recent renovation occurred leaving the interior as it is seen today (fig. 4). Portions of the Dempwolf building were re-exposed including some windows and the wood vents (fig. 5).

Original drawings dated May 17, 1890 (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.). Fig. 8, above. Plan of Tower Elevation Steps, Section through Corridor, Section of Tower, Front Elevation of Tower. Fig. 9, below. Right to left: Ground Plan, Foundation Plan, Part West Elevation, Part Front Elevation.
The newly-formed congregation of Trinity Evangelical Lutheran Church was chartered on August 31, 1891. The congregation hired the Dempwolf architecture firm for the new design. The construction was to cost no more than $12,000 for the brick, Akron-
plan building. The cornerstone was laid November 1, 1891 and was dedicated July 3, 1892. Final building costs totalled $1,000 more than was originally estimated.¹

The two-story church was designed in the Romanesque Revival (fig. 1). Entering at the southeast or southwest corner led into the main stair hall (fig. 5). To the north of the hall was a large Intermediate School room which was surrounded by seven rooms to the west, north, and east. These surrounding classrooms were divided from the larger room and each other by moveable glass partition walls typical of the Akron Plan. The second floor was laid out very similarly as the first floor. A series of nine classrooms bordered the west, north, and east wall and overlooked the first-floor auditorium from a balcony. These second-floor classrooms were separated from the balcony and each other by moveable glass partition walls as well and included stadium seating. All of the seating in the Chapel was designed to angle toward the altar (fig. 2). A clerestory level brought light into the two levels below.

The exterior of the brick building reflected the architecture of the interior (fig. 5). The clerestory level was clad in wood siding and included triple double-hung windows on all four sides. The front (south) elevation included round-topped, double-door entrances at the

west and east corners. Between these vestibules was a front-facing gable with large round-topped windows. The side (west and north) elevations were nearly identical and included pairs and triplets of round-topped, double-hung windows spread neatly across the facades. The east elevation included an entrance at its north corner. The rear (north) elevation also included pairs and triplets of round-topped, double-hung windows spread neatly across the façade. The second-floor portion of this elevation was in a semi-circular shape which reflected the space layout in the interior.

At the end of 1927, the building committee again designed a new church, and once again things moved swiftly. This plan would have demolished the Dempwolf chapel. In January 1929, a few congregation members proposed to donate money to move the chapel if the church supplied the money to buy the adjacent (west) lot and this offer was accepted. Starting on June 17, 1929, it only took the contractor one month to move the chapel building to

Fig. 3, above. The 1910 Sanborn map shows the brick building as it was originally built. The 1916 and 1921 Sanborn maps show no changes (Sanborn Fire Insurance Map. "32 Commerce St, Chambersburg, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1910.). Fig. 4, below. The 1930 Sanborn Map shows the chapel after it was moved and the new church building was built (Sanborn Fire Insurance Map. "32 Commerce St, Chambersburg, PA." Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1910.).
its new lot.\textsuperscript{2} The new stone church was built to the southeast corner of the chapel (fig. 4). A stone education building was later built to the south of the chapel and to the west of the church. The north and part of the east façade of the chapel can still be seen.

ST. MARK’S EVANGELICAL LUTHERAN CHURCH

700 E Market St | York PA

Date Designed: March 1892
Groundbreaking: April 18, 1892
Cornerstone Laid: June 5, 1892
Contractor: Carpenter: Edward Blasser
Masonry: Mr. Lefever
Painting: Marcellus Freed
Date Dedicated: April 23, 1893
Date Demolished: c. 1965

Fig. 1. An 1893 photograph of the front elevation of the Dempwolf building just after it was built (Artwork of York. Chicago: The W.H. Parish Publishing Co., 1893.).
Plans to build a church building on a newly acquired lot progressed quickly in 1892 (fig. 2). The Dempwolfs designed the building in March 1892. On April 18, the groundbreaking occurred and on June 5 the cornerstone was laid. Carpenter Edward Blasser, mason Mr. Lefever, and painter Marcellus Freed were employed to complete the new building. It was dedicated on April 23, 1893 for $11,000.

The brick and wood church was designed in the Shingle Romanesque style. The interior church had three finished levels (fig. 5). In the basement was an Assembly Room. The first floor included

---

5 St. Mark's Evangelical Lutheran Church, 1956.
two entrances on the northwest and northeast corners adjacent to two flights of stairs. Between the entrances was an Infant School room. Also on this level was a Sunday school room with a pulpit to the south. The second floor was composed of the main auditorium. The rear (north) portion included a set of pews parallel to the altar and separated by one aisle. The front portion of the auditorium included a set of pews which in an arching pattern separated by two aisles. The western and eastern portions of the pews were under arched side aisles (fig. 3-4).

The front (north) elevation was mostly symmetric (fig. 1). This façade was dominated by a front-facing gable in the center clad in wood shingles. Large arched windows resided within the gable. Flanking this was a pair of double doors and triple double-hung windows. The eastern corner was anchored by a five-stage tower. The west and east side elevations were nearly identical and included multiple pairs of double-hung windows. Three eyebrow dormer windows could be seen on each side. The rear (south) elevation included arch-topped windows placed orderly across the façade under a hipped roof.

In 1964, the congregation made plans for a new building; the Dempwolf-designed church was then demolished. The new building was completed in 1965.6

ST. PETER’S EVANGELICAL LUTHERAN CHURCH

(Vietnamese Alliance Church of York)

1154 N George St | York PA

Date Designed: c. 1892
Groundbreaking: August 27, 1892
Cornerstone Laid: October 30, 1892
Date Completed: July 9, 1893
Date Vacated: 1930

St. Peter’s Church was founded in 1892. The congregation purchased a lot in North York almost immediately and hired the Dempwolfs to design a church building. The
groundbreaking occurred in August 27, 1892. The cornerstone was laid three months later on October 30. The building was completed on July 9, 1893 for $4,700.2

The building was designed in the Shingle style and was originally clad in wood siding and shingles (fig. 1); it has since been covered with vinyl siding (figs. 3-4). The front (east) façade is symmetric and consists of a gable wall with a large, gothic-arched window in the center and pairs of flanking windows on either side. Small Victorian-trimmed porches can be seen at the north and west corners. There is a small bell tower atop the roof peak. The rear (west) elevation is also symmetric and consists of three sets of three windows (fig. 6). The center set extends into the gable. The west and east side elevations are nearly identical. They include two projecting cross-gables with sets of gothic-arched windows

---

placed along the facades (fig. 2). The north elevation contains an additional entrance. Many of the original window openings have been covered.

The interior of the church was originally laid out into two main rooms (fig. 5). From the vestibules at the northeast and southeast corners, one could enter into the Infant School Room or the Auditorium. Each room included pews parallel to the altar and divided by a center aisle. The rooms were separated from each other by moveable glass partition walls. A space for an organ was located to the south of the altar and a vestry was located to the north of the altar. A third entrance to the building was through the vestry.

In 1929, the congregation decided to leave the Dempwolf-designed building for a new church building just south and across the street. The same year, the cornerstone was removed and placed in the new building. The Dempwolf building was vacated by the congregation in 1930.\(^3\)

The building is still used as a church today.

ST. JOHN’S EVANGELICAL LUTHERAN CHURCH

31 S 2nd St | Steelton PA

Date Designed: December 1892
Cornerstone Laid: April 30, 1893
Date Dedicated: July 15, 1894
In June 1887 the lot bounded by North 2nd, Pine, and North 3rd Streets was obtained (fig. 2). A few years later the building committee asked for and unanimously approved designs drawn by the J.A. Dempwolf firm\(^1\) in December 1892.\(^2\) On April 30, 1893 the cornerstone was laid. About fourteen months later the building was complete and on July 15, 1894 was dedicated.\(^3\) The total cost for the building equaled $16,950.\(^4\) When including the furnishings, equipment, and outside improvements, the cost jumped to $45,000.\(^5\)

\(^3\) St. John's Evangelical Lutheran Church, 1975.
\(^5\) St. John's Evangelical Lutheran Church, 1975.
The interior of the church is composed of two distinct areas: the main sanctuary and the Sunday school wing (fig. 12). A majority of the sanctuary is original. The auditorium space is entered from under the choir loft or at the west side aisle. The pews are arranged in a semi-circle, divided by two aisles, and slope down to the altar on the south wall (figs. 3, 10). Behind the altar is a room originally named the Study and to the east of the altar is a room which was originally the vestry. Two more entrances to the sanctuary can be found at the southwest and northeast corners of the room. A tiered balcony is situated at the north end of the auditorium; in 1910 it was lowered. 6

Originally, the east wall of the sanctuary was composed of moveable glass partition walls that separated the space from the adjacent Akron Plan Sunday School wing. On the first floor this wing included a semi-circular Adult School room surrounded by smaller classrooms and an Infant room. These rooms were all divided from each other by moveable glass partition walls. The second floor of the space

6 St. John’s Evangelical Lutheran Church, 1975.
included a balcony which looked down into the Adult School room. The semi-circular balcony was surrounded by small classrooms that were divided from each other by glass partition walls and had tiered seating (fig. 11). In 1960, portions of the Sunday school wing were removed to make room for a reconfiguration and an addition to the space. These changes were completed in June of 1961.\textsuperscript{7} A finished basement was included under the wing which contained another meeting space complete with an assembly room, a pulpit, an exterior entrance, and storage areas. The basement was renovated in 1973.\textsuperscript{8}

The exterior of the Romanesque Revival building is dictated by the spaces inside. It is accented by a six-stage bell tower at the north end and a three-stage tower at the south end (fig. 5, 8). In between the two towers is a pair of gabled dormers. Located within the dormers and along the rest of the façade are rows of round-arched windows. The north elevation could also be considered a front elevation as it contains two entrances, one being in the first stage of the bell tower at the west corner (figs. 1, 9). A front-facing gable wall is

\textsuperscript{7} St. John’s Evangelical Lutheran Church, 1975.
\textsuperscript{8} Ibid.
located beside the tower and includes a signature stone (fig. 6) and round-arched windows which let light into sanctuary and the tiered choir loft. A turret can also be seen on this elevation which houses a set of stairs. The rest of the north elevation includes series of windows usually in sets of three. The second floor of this portion has been changed from a semi-circular wall into perpendicular walls. The south elevation mimics the north elevation with the three-stage bell tower at the west end, a front-facing gable with windows allowing light into the sanctuary, and a series of windows located in the former Sunday school portion (fig. 8). The rear (west) elevation has changed from the original drawings especially where the semi-circular walls were changed into perpendicular walls (figs. 7, 9). The semi-circular portion of the clerestory level has also been altered and a majority of the windows have been removed.

Additional improvements to the building occurred in 1922 totaling $30,000.9 The details of these renovations were not found.

**EVANGELICAL LUTHERAN CHURCH**
(Grace Lutheran Church)

220 N Charles St | Red Lion PA

Date Designed: c. 1894
Groundbreaking: April 7, 1894
Cornerstone Laid: June 10, 1894
Contractor: Horace Welty
Date Completed: late 1895
Date Dedicated: May 24, 1896
Date Demolished: c. 1933
Construction began in 1894 on donated land measuring 74’ x 100’. The building was designed by the Dempwolf firm and Horace Welty, Contractor was awarded the building contract. The groundbreaking ceremony occurred on April 7, 1894 and the cornerstone was laid on June 10 of that year.¹

The congregation was officially chartered in February 1895² and by the end of that year, the new building was completed. It was dedicated on May 24, 1896. The total cost of construction totaled $4,819.12.³

The shingle-style building was clad in wood clapboards (fig. 5). The building was organized in a cross-gable plan with each elevation incorporating a front-facing gable façade. The front (south), rear (north), and east side elevations were similar and included gothic-arched windows in the gable wall. A four-stage bell tower was positioned at the southeast corner and included the main entrance (fig. 1). The west side elevation was slightly

---

different, with different window organization, than the other three facades. A small cupola was located at the intersection of the gables and would have been used to vent the building.

The one-story building had two main rooms (fig. 5). The smaller room was the Sunday school room and was separated from the larger auditorium by moveable glass partition walls. The altar was situated on the west wall of the auditorium; a vestry was located to the south of the altar and a choir loft was located to the north (fig. 4).

ST. MARY’S LUTHERAN CHURCH
(St. Mary’s Evangelical Lutheran Church)
3978 Littlestown Pike | Silver Run MD

Date Designed: February 1894
Cornerstone Laid: July 8, 1894
Contractor: John W. Eline
Date Dedicated: May 20, 1895

After separating from a larger group the Reformed congregation made plans to build a new church in Silver Run. The newly-formed group hired the Dempwolf firm to design the stone church in early 1894¹ and awarded the construction contract to John W. Eline.²

The cornerstone was laid on July 8, 1894 and was finished for the dedication on May 20, 1895. The final cost totaled about $16,000.3

The gray stone and Hummelstown brownstone building with Peach Bottom slate roof4 was designed in the Gothic Revival style. It is asymmetric and every elevation is different (fig. 8). The front (east) façade includes a four-stage bell tower at the north corner above the main entrance (fig. 2). A front-facing gable with large gothic-arched windows centers this façade and is surmounted by a cupola used to vent the interior of the church. To the south is an octagonal end projection with single gothic-arched windows on each face. The north side elevation includes the tower at the east corner, complete with a signature stone

---

3 Heltibridle, Mary E. *St. Mary's Lutheran Church and Her People, 1762-1962*. Silver Run, MD: unpublished pamphlet, 1962.
(fig. 3), an off-centered front-facing gable with gothic-arched windows, a rear entrance with loggia, and a smaller front-facing gable with half timbering. The south side elevation includes the octagonal projection at the east corner, a large, but plain front-facing gable with an oculus window at the peak, and three sets of gothic-arched windows. The rear (west) façade includes a rear entrance at the south corner, a front-facing gable with half timbering and a series of gothic-arched windows in the center, and a side-gable section with plain double-hung windows (fig. 4).

The interior is laid out into three main rooms on one level (fig. 10). Beyond the front (northeast) vestibule is the main auditorium which is situated on a north-south axis (figs. 5-6). The rear pews, separated by one aisle, are parallel to the altar and the front pews are separated by two aisles and arched towards the altar. The entire auditorium is sloped down toward the altar and the vaulted ceiling includes exposed wood trusses (fig. 9). To the east of the altar is an octagonal room which includes the organ; a vestry, with exterior entrance, is located to the west of the altar. The second main room is the Adult Sunday School Room. It is situated to the west of the

Fig. 5, above. The interior of the Auditorium, date unknown (Heltibriddle, Mary E. St. Mary's Lutheran Church and Her People, 1762-1962. Silver Run, MD: unpublished pamphlet, 1962.). Fig. 6, below. The interior of the auditorium today (Photo by author).
auditorium and is separated from it by moveable glass partition walls. Its floor is not sloped. The third room is an Infant School Room. It is located to the north of the Adult Sunday School Room and is separated from it by a set of moveable glass partition walls (fig. 7). A small vestibule connects the three main rooms at the north elevation.

Fig. 7. The moveable glass partition walls are still retained between the Infant Sunday School Room and the Adult Sunday School Room (Photo by author).

Fig. 10. Original drawings, dated February 7, 1894. Bottom to top: Section through Wall, Foundation Plan, First Floor Plan (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
The story of the Zion Lutheran Church congregation can be traced back to the late eighteenth century. After first outgrowing a log church building and then a limestone building, which can still be seen to the north of the current building, the congregation hired
the Dempwolf firm to design a third church (fig. 4). The date on the cornerstone reads 1891 and the church was formally dedicated on January 22, 1893.1

The Hummelstown brownstone building was designed in the Romanesque Revival style and originally measured 50’ x 93’. A 95’ six-stage tower sits at the southeast corner of the building (fig. 1).2 To the west of the tower, on the south façade, is front-facing gable with three round-arched windows. The vestibule at the southwest corner was added during the renovation also by the Dempwolf firm.3 The east elevation, from street corner to the north, includes the bell tower, a smaller front-facing gable with round-arched windows, a one-story Victorian porch with two dormers above, and an octagonal projection with paired stained-glass windows. The vestibule located to the north of the projection was added at a later time. The roof is clad in Peach Bottom, Pennsylvania slate.4

The building’s exterior has retained a majority of its original features; however the interior was significantly altered in 1911. When built, the sanctuary was “oriented toward the east and the altar was located in the alcove where the small altar is located today faced by semi-circular pews (fig. 2). The room was also divided into

Fig. 2. The interior of the sanctuary today; note the alcove on the far wall where the altar was originally located (Photo by author).

---

1 Harrisburg Telegraph. "New Lutheran Church." January 2, 1893.
2 Ibid.
4 New Lutheran Church, 1893.
classrooms through the use of moveable partitions.” The rooms included a main auditorium seating 350 people, an intermediate Sunday school room, an infant classroom, a Bible classroom, and a library. The ceiling of the building was accentuated by a series of wood ribs and vents (fig. 3). The 1911 changes dedicated on March 17, 1912 (fig. 7). The sanctuary was “opened into one large room and the altar was placed in a new alcove in the north wall, where it is located today (fig. 3).” At the same time the doors located on the east façade were replaced by windows.

The interior of the sanctuary was renovated three more times: in 1950, 1960 and 1990. These changes affected the chancel area and wood details.

During the 1911 renovation of the brownstone building, the Dempwolfs designed interior alterations and exterior additions to the original limestone church building (fig. 5). Changes included removing the steeple, adding a glass skylight, reconfiguring the floor plan to change the building into a separate Sunday school building, and adding a brick kitchen.

Fig. 3. A photograph of the sanctuary as it can be seen today. Note the ribbed ceiling and wood vents that were part of the original Dempwolf design (Photo by author).

Original drawings, undated; clockwise from bottom left: Elevation looking toward Chancel, Section through Chancel looking toward Choir, Floor Plan, Front Elevation, Side Elevation, Plan at Chancel (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
Planning for the construction of this Hellam, PA church was conceived in a congregational meeting held in March of 1894 when the building committee was selected. A plan for the new church was submitted by the J.A. Dempwolf firm (fig. 8) and on March 12,
1894, the building committee approved the plans and “building operations began at once.”¹ Contractor William Miller was hired² and just six months after the plan was approved, the building was complete (fig. 1). On September 23, 1894, the building was formally dedicated. The new building included auditorium-style seating for three hundred people with a Sunday school room attached. When built, the building utilized electric lights and a hot air heating system.³ Total construction costs equaled $2,500.⁴

---

³ Stump and Anstadt, 1925.
The Shingle-style building has had three major alterations occur to it in the building’s history. The first occurred in 1948 and 1949 when members of the congregation dug out the basement level. This project was completed in 1950.\(^5\) Two exterior entrances to the basement were also added, one on the west elevation (fig. 3) and one on the south elevation (fig. 4). The second included removal and of the moveable glass partition wall which separated the sanctuary and the Sunday school room. Today a plaster wall stands in its place. The third alteration occurred in the form of an addition at the rear (southwest) corner of the building. Changes in siding and exposed rafter tails in the eave confirm the differences between the original church and the addition.

The exterior basement walls are constructed of field stone common to the south central Pennsylvania area. The cornerstone is located at the northwest corner of the church with the inscription “Evan. Luth. Church. Hellam, 1894.”

The first-floor walls are stick construction with wood siding. Below the windowsills the siding is simple clapboards. Above the windowsills the siding is composed of wood shingles. The hipped roof is clad in asphalt shingles and the four-stage bell tower, located at the northeast corner, has changed little since it was first built (fig. 9).

The simple interior of the church has been altered very little (fig. 5). In the main sanctuary, the interior walls retain wainscot below a chair rail and plaster walls above. A wood cornice runs along the side and rear walls. The altar (south) wall includes a recessed polygonal apse (fig. 6). On either side are recessed arch details. The room to the east of the altar was designed as a vestry. The room to the west of the altar had originally been an open choir loft. It has since been walled in the hides the organ. The semi-circular pews, divided by a center aisle are retained (fig. 7).

The former Sunday school room has been divided into two rooms and the glass wall that formerly separated it from the sanctuary has been removed and replaced by a plaster wall. The small southwest addition holds an office.
Fig. 8. Original drawings, undated; clockwise from bottom left: Rear Elevation, Elevation of Chimney, Front Elevation (Pike), Side Elevation (West), Side Elevation (East), General Floor Plan, Foundation Plan (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
Fig. 9. Original drawings, undated; clockwise from bottom left: Details of Tower, Section showing Infant Room Truss and Sash Partition looking from Auditorium, Transverse Section (York County Heritage Trust Library & Archives. “Dempwolf Architectural Collection.” Vertical File 34195.).
In 1811 a simple brick building was built for the German Evangelical Lutheran congregation in the small town of Taneytown. This building received three significant additions in 1840, 1871, and 1897. The last renovation was designed by the Dempwolf firm.
and was dedicated on May 9, 1897. The cost of renovations and additions totaled $17,110.98.¹

The Dempwolf renovations reoriented the front façade from the south elevation to the west elevation and changed the roof line (fig. 7). Renovated in the Romanesque Revival style, the building was refaced in brick with Hummelstown brownstone accents. The front (west) elevation includes the front-facing gable with round-arched windows, a projecting vestibule, buttresses, and brick corbelling along the roof line (fig. 2). To the north is a stair tower with similar details. A four-stage bell tower anchors the southwest corner of the building. The south elevation includes a semi-circular projection in the center with successive round- and flat-arched windows (fig. 1). This projection is flanked on either side by round-arched windows and entrance doors. The rear (east) elevation includes an end-gable wall from one of the previous additions (fig. 3).

¹ This information was obtained from a set of histories located on the front wall of the vestibule within the church.
The interior of the church was also changed during the Dempwolf-designed renovations (fig. 8). Upon entering through the front (west) entrance, one enters into a large vestibule. At either end (north and south) are sets of stairs to the second floor. Opposite of the front door is a set of double doors into what was originally a Bible Classroom and now holds a chapel. To the east of the chapel is a large room originally known as the Intermediate Sunday School Room which retains its original cast iron columns (fig. 4). To the south of this room, and separated by the original moveable glass partition walls is a room which was originally the Infant Room and included stadium seating (fig. 5). To the east of the former Infant Room is another vestibule with stairs to the second floor.

The second floor is composed of the auditorium which was to seat 350
people. The pews are still separated by three rows and positioned in a semicircle to face the altar located on the south wall, in the semi-circular projection (fig. 6).

ST. PAUL’S EVANGELICAL LUTHERAN CHURCH

201 W Louther St | Carlisle PA

Date Designed: Chapel: c. 1898
Church: c. 1905

St. Paul’s was built in two stages. The first portion was the Sunday School wing which was built around 1898 for $10,720. The second portion was the main sanctuary which was built circa 1905 for $35,000.¹ Both parts were designed in the Romanesque Revival and were built of limestone with brownstone accents.

When designed, the Sunday school wing was a typical Akron Plan building (fig. 14). The first floor was composed of a large Adult Room in the center and was surrounded on three sides (west, north, and east) by class rooms and an Infant School room. These rooms were separated from each other by glass partition walls and curtains (fig. 2). To the south of the Adult School room was the altar and choir loft. Small rooms, a choir room and vestibule to the west and a library and vestibule to the east, flanked the altar. The second floor included a semi-circular balcony overlooking the Adult School room and altar below. The balcony was surrounded by tiered classrooms on the west, north, and east sides. A large skylight in the center brought light into both levels of the building. A majority of these original spaces have been covered or removed (fig. 3).
The exterior of the Sunday school wing has changed very little. Originally the front façade was the south elevation until the sanctuary was built (fig. 14). This plain elevation included a series of windows and doors. The east side elevation also includes exterior doors, a front-facing gable wall, and evenly-placed windows (fig. 4). The rear (north) and other side (west) elevations are also plain and are composed of series of evenly-spaced windows. The skylight would have been seen on the west elevation, but has since been removed.

The sanctuary portion of the church was built to the south of the Sunday school wing (fig. 13). Upon entering the main vestibule on the east side one enters directly into the sanctuary which is a typical basilica plan. Pews separated by a single center aisle angle down to the chancel at the west wall (figs. 4, 5, 6).
5-6). South of the altar is a room originally labeled as the Pastor’s Study and north of the altar is the organ and choir loft. A balcony is situated at the east side of the sanctuary and is accessed by a set of stairs at the northeast corner of the building (fig. 7).

Behind the altar is a corridor that leads to a lecture room located to the north of the sanctuary. Originally the room had tall ceilings with plaster details, a sloping floor towards the altar along the north wall, and a wood vent in the ceiling. Many of the details have been covered with a drop ceiling (fig. 8).

Like the exterior of the Sunday school wing, the exterior of the Sanctuary portion of the building has changed little. The front (east) elevation includes a five-stage bell tower at the south corner, a front facing gable with covered entrance and large stained glass window, and a large stained glass window letting light into the lecture room (figs. 4, 10). On the south wall of the entrance is a signature stone made of

A signature stone dated 1906 is located on the south wall of the front vestibule (Photo by author).
brownstone (fig. 9). The north elevation is composed of a turreted octagonal section for the stairs and a series of three arched windows separated by buttresses (fig. 17). Half of this elevation is covered by the Sunday school wing. The rear (west) elevation is not easily accessed as it abuts the neighboring house, but it includes a front-facing gable in the center and small windows piercing the wall (fig. 18). The south side elevation is anchored by the bell tower at the east corner. Four arched windows separated by buttresses run the length of the wall (fig. 1). At the west corner is a front-facing gable wall with two tall arched windows and a rear vestibule.

Instead of renovating their existing building, congregation members decided in 1897 to build a new structure. The old church was razed in the spring of 1898. The building committee secured a design for the new building from the Dempwolf firm.¹ The contractor

was Enoch Miller\(^2\) and the cornerstone was laid August 7, 1898.\(^3\) The new building was completed for $9,450.\(^4\)

The building was originally designed for two distinct uses: a sanctuary and a Sunday school wing (fig 10). The church is entered from the south façade into the auditorium. The pews are divided by a center aisle and are sloped down towards the altar on the north wall (figs. 2, 12-13). To the west of the altar is a room once identified as a study; to the east is the choir. At the south end of the auditorium is a balcony which is accessed by a set of stairs in the bell tower at the southeast corner of the building. The ceiling is vaulted and includes exposed trusses and vents (fig. 3).

The Sunday school accessed from an exterior entrance on the south façade or by a door at the north east corner of the sanctuary. A majority of this wing is devoted to an Adult School room at the northeast corner (fig. 4). To the southeast is an octagonal Infant Room that was separated to the main room by a glass partition wall. To the west of the

---

\(^3\) First Lutheran Church, 1991.
Adult School room is a pair of class rooms which were separated from the main room by glass partition walls.

In 1914, the church and the Sunday school portions were remodeled at a cost of $2,000. These changes were dedicated in August 1914.\footnote{First Lutheran Church, 1991.}

The exterior of the Romanesque Revival-style building is composed of red brick with brownstone accents. The front (south) elevation includes a six-stage bell tower in the center which anchors the southeast corner of the sanctuary portion of the building (fig. 1). To the west is a front-facing gable with projecting vestibule flanked by a pair of triple, round-arched windows, and surmounted by a large rose window. To the west of the tower is the Sunday school portion of the building. It includes a projecting vestibule and the projecting octagonal room under a large hipped roof (fig. 11).

The west side elevation is divided into six bays by buttresses (fig. 5). The rear (north) bay includes an entrance into the study west of the altar. The front five bays are identical and include round-arched windows with tracery.
The east side exterior elevation of the Sunday school contains paired windows separated by buttresses (fig. 9). The bell tower is also present on this elevation. A signature stone can be seen on the tower (fig. 6).

The rear elevation includes a front-facing gable at the west end with a round-arched window allowing light onto the altar. The eastern portion of this elevation has been changed. Originally the façade was composed of a series of paired windows separated by buttresses. In 1923, an addition was built to the rear of the Sunday school portion of the building (figs. 7-8). Changes included a new entrance and new paired windows.

UNION PRESBYTERIAN CHURCH

5637 Street Rd | Kirkwood PA

Date Designed: c. 1898
Date Dedicated: August 30, 1899

In 1898 the congregation decided to expand their 1869 building by adding a story to their current building. The Dempwolf architecture firm drew the plans for the renovation of the 55’ x 85’ church. An addition was also added to the front façade which included a vestibule/stair hall and an 86½’ tower. The changes were dedicated August 30, 1899. Final costs totaled $7,500 which did not include the carpet, cushions, the bell, or windows.¹

Originally the building was a simple gabled, brick structure (fig. 2). The Dempwolf alterations made the building much grander. The front (south) façade includes a 13’ two-story addition with a Victorian porch in the center and round-arched windows placed symmetrically on either side. Above the addition is a large rose window. A five-stage bell tower anchors the east corner (figs. 1 and 3).

The west and east side elevations were identical when originally designed (fig. 5). An addition has been added to the east elevation. Today the west elevation is divided into six bays by engaged brick pilasters. In each of the bays is a window on the first floor and a round-arched window on the second floor. The front entrance addition is also seen from this elevation which includes an entrance door and round-arched window above. The hipped roof includes three vented dormers on either side elevation and one centered on the rear elevation.

The interior of the church is divided into specific areas by level. The first floor was used for Sunday school purposes (fig. 6). The Men’s Bible Classroom is divided from the Infant School Room and to the north is the Intermediate School room. From the west to
east on the north wall are three rooms: a kitchen, a classroom, and a Women’s Bible Classroom. Originally the classrooms were separated from one another by moveable glass partition walls (fig. 6).

The second floor is composed of one large room: the auditorium (fig. 4). Entered from the stair hall at the south of the building, the room includes pews separated by two aisles. The side columns of pews are angled towards the altar on the north wall. To the east of the altar is a choir loft. The vaulted ceiling is plain but features large wood ceiling vents.

Fig. 4. The interior of the second-floor auditorium; note the wood ceiling vents (Photo by author).

CALVARY LUTHERAN CHURCH

9 N Main St | Dover PA

Date Designed: c. 1899
Cornerstone Laid: September 10, 1899
Contractor: C. Henry Quickel, et al.
Date Completed: December 16, 1900

In January of 1899 land was donated; construction began on June 24, 1899 and the cornerstone was laid September 10, 1899. Construction for the church was performed by C.
Henry Quickel\textsuperscript{1} for $8,000.\textsuperscript{2} After the building was under roof there was a lapse in construction, but it was finally finished on December 10, 1900.\textsuperscript{3}

The brick building sits under a hipped roof. The front (west) elevation has been changed since it was built. When first designed the façade did not include a center entrance (fig. 1). It originally had three sets of three windows with the center set being arch topped. In the spring of 1953, plans for renovations and additions to the building were approved, which cost about $25,000 and was completed in June 1954.\textsuperscript{4} Today the center set has been covered up with a new projecting vestibule (fig. 2). The original four-stage brick and wood bell tower anchors the southwest corner (fig. 6).

The south side elevation is composed of a front-facing gable with round-arched windows. The north side elevation is much plainer and includes a series of tripled windows...
under the hipped roof (fig. 3). A church school addition was built 1959-60 leaving the rear elevation covered.⁵

When originally built the interior of the church was one level. The entrance was through the base of the bell tower. A door to the left leads into the auditorium which includes a shallow-vaulted ceiling with wood ceiling vents (figs. 4 and 5). The chancel is centered on the east wall. To the north is a room originally labeled vestry; to the south was a space that held the choir. To the south of the auditorium is a room originally known as the Infant Room. At one time the room was separated from the auditorium by a moveable glass partition wall (fig. 7). In 1972 a major renovation of the interior of the sanctuary occurred.⁶

FIRST EVANGELICAL LUTHERAN CHURCH

21 S Bedford St | Carlisle PA

Date Designed: Church: 1899
Redecorating: 1931
Cornerstone Laid: May 6, 1900
Date Dedicated: Church: November 10, 1901
Redecorating: December 20, 1931

Fig. 1. The Dempwolf-designed building today taken at the northwest corner (Photo courtesy of Don Roeder).
The congregation hired the J.A. Dempwolf architecture firm to design a new church edifice (fig. 2); the cornerstone was laid on May 6, 1900 and was dedicated one and one-half years later on November 10, 1901.¹

The Italianate-style building is built of roman bricks with sandstone accents. The front (north) elevation is composed of a three-stage tower at the east corner and a seven-stage tower at the west corner (fig. 1). In between the two towers is a front-facing gable wall. Three recessed double-door entrances are situated under round-topped arches which span the width of the wall and are surmounted by a large rose window.

The west side elevation contains from north to south: the seven-stage bell tower, a series of three round-arched, first- and second-story windows, a front-facing gable wall with large, round-arched stained-glass window, a loggia with an

entrance, another front-facing gable wall with a series of first- and second-floor windows, and a rear loggia with a rear entrance (figs. 3-4).

The east side elevation is similar to that of the west elevation and contains from north to south: the three-stage tower with signature stone (fig. 5), a series of three round-arched, first- and second-story windows, a front-facing gable wall with large, round-arched stained-glass window, an octagonal projection, and the modern education wing. The rear (south) elevation is composed of a series of paired windows on the basement and first-floor levels and a series of single windows on the second-floor level (fig. 6).

The interior of the church is composed of two main areas: the sanctuary portion to the north and the Sunday school to the south. Upon entering the front (north) one enters into a vestibule before entering into the sanctuary. Pews are separated by three aisles which lead to the chancel on the south wall (fig. 7). To the west of the chancel is a vestibule and parlor; to the east of is a space that formerly held the choir and the organ and a small study (fig. 16). A balcony is positioned
over the north vestibule (figs. 8, 15). In 1931, the interior of the sanctuary was renovated. These changes were designed by J.A.’s son, Frederick. “At this time the apse was completely redecorated, and the marble altar and reredos were” added. The renovations were dedicated December 20, 1931.² In 1941, the interior of the building was once again renovated, although this time the Dempwolf firm was not involved. Changes included moving a new organ to a new location and a reconfigured chancel area.³

The Sunday school portion is located to the south of the sanctuary. The large main room includes a two story ceiling, a series of windows at ceiling level to bring in light, a large wood ceiling vent in the center, and evidence of the tired Men’s Bible Classroom which was open (figs. 9-11).

---

² Roeder, 2002.
³ Ibid.
In 1965, the education wing was built to the southeast of the Dempwolf-designed building. “This project also included renovation of the basement of the existing church building, major changes to the old Sunday school chapel and the enclosing of the Men’s Bible Classroom.”

Two further renovations occurred in the church sanctuary, the first in 1976 and the second in 2002.⁵

EMMANUEL REFORMED CHURCH
(Emmanuel United Church of Christ)

124 Broadway St | Hanover PA

Date Designed: c. 1899
Cornerstone Laid: Chapel: August 6, 1899
                   Church: November 18, 1900
Date Completed: Church: 1901
Date Dedicated: Chapel: July 8, 1900
                   Church: September 18, 1904

While designed in 1899, the construction of Emmanuel Reformed Church occurred in two stages. The first stage was the Sunday school chapel which was built to the west of an earlier church building (figs. 9-10). The cornerstone for the chapel was laid on August 6, 1899 and the building was dedicated July 8, 1900. The second stage began a few months after the chapel was completed and the previous church building was demolished. The cornerstone for the church portion was laid on November 18, 1900 and the building was finished in 1901. It was not dedicated until September 18, 1904.¹ The chapel cost $8,000 to build and the church cost $50,000.² Included in the Dempwolf’s Gothic-Tudor design was a clerestory and Latin cross plan. The front wall was to be composed of Avondale white marble from near Philadelphia. The sanctuary was to be separated from the nave by a quarter sawn oak screen. The transept and nave were to be

¹ Emmanuel United Church of Christ. Emmanuel United Church of Christ, 250 Years of Service to God, 1765-1990. Hanover, 1990.
connected with the chapel by an ambulatory on each side of the chancel. All of these things can still be seen.

The church portion is entered from the east into a building-wide vestibule that serves as the antechamber to the auditorium (fig. 2). The sanctuary includes a vaulted paneled wood ceiling, exposed carved wood trusses, and oak pews separated by three aisles leading to the altar on the west wall (fig. 3). To the south of the chancel is a vestry with a separate exterior entrance; to the north is space for the organ and the choir. Located above the front vestibule is a balcony which is accessed by a set of stairs at the southeast corner (fig. 4).

Doors between the chancel and the vestry and the chancel and the organ lead to the Sunday school chapel. Composed of a two-story high Sunday School room in the center, the space is

---

3 Emmanuel United Church of Christ, 1990.
skirted by an Infant Room on the south side, a Reading Room and Library on the north side, and semi-circular classrooms on the west end. All of the spaces are divided from one another by moveable glass partition walls (fig. 5). A clerestory level brings light into the main room (fig. 6).

On the exterior, the front (east) façade of the sanctuary is composed of white marble. The south corner is anchored by a four-stage bell tower and the north corner is anchored by a three-stage tower. A front-facing gable wall is situated between the two towers and includes a projecting vestibule and a rose window (fig. 7). The north and south side elevations are nearly identical and include three pairs of windows leading to the front-facing gable transept wall with large window.

The rear (west) elevation of the building is comprised of the Sunday school chapel. Primarily semi-circular to reflect the plan, the walls are decorated by sets of triple windows on the first floor and in the clerestory (fig. 8).
The Dempwolfs also designed a marble floor scheme around 1915 which was installed for $1,700.4

In 1998, the church underwent a $275,000 restoration project.5

FIRST PRESBYTERIAN CHURCH
Sunday School Building

225 E Market St | York PA

Date Designed:
Kerr building: 1899
Sunday school building: 1930-31

The main section of the current church building was built 1860-61. In 1867, the congregation needed a larger Sunday school area and the Kerr building was added to the northwest corner of the church (fig. 2). Addition and renovation schemes have occurred to the Kerr building, and of these the J.A. Dempwolf firm was involved with two: 1899 for $12,021 and in 1931 which included a large addition and totaled $104,419.62.\(^1\)

Originally the southeast corner of the Kerr building was the only portion which connected to the church building (fig. 8). The Kerr building was entered from the south corner of the west side which led into a hall with a stair to the second floor. The foyer led into the Chapel at the northwest corner of the building, which included sliding partition walls (fig. 7). The Kerr building featured an arched loggia that led into an Infant School room and a Men’s Parlor at the northeast corner. The second floor was composed of a large Main School Room with a circular skylight in the center. Five classrooms flanked the Main School Room on the west side and two classrooms flanked it on the south side.

The Victorian exterior was composed of brick. The front (west) façade included a gable on the north corner with a center projecting vestibule flanked by round-arched windows (fig. 6). The second floor also included round-arched windows while the gable portion was composed of brick crenellation. The southern portion of this façade was a
series of paired round-arched windows with a projecting vestibule. Turrets accented the gable roof.

The south side elevation included a front-facing gable at the west corner with pairs of round-arched windows separated by brick piers (fig. 6). The eastern portion of this façade was also a series of paired round-arched windows on the second floor. A round-arched loggia hid another series of paired round-arched windows on the first floor.

The 1930-31 Dempwolf renovations and additions changed the building significantly on the interior. The large addition to the east of the Kerr building and the north of the church building was designed in the Victorian style to match the existing building.

On the front façade the dual entrances were eliminated and a new center entrance was added (fig. 1). The windows in the center bay of the front-facing gable were changed to pairs of round-arched windows. Similarly the southern entrance was changed to a pair of round-arched windows. The south side façade changed very little (fig. 3). The north side façade continued with series of single, paired, and triple round-arched windows both on the
first and the second floor. The rear (east) elevation is a front-facing gable with single and paired double-hung windows. Turrets still anchor the corners of the gable roof (fig. 5).

The interior of the Kerr building was altered the most. On the first floor, the entrance was centered on the west wall and a new central hallway was positioned on the interior of the building. Classrooms sat on either side (north and south) of the new hall. The second floor changed from being one large room into three divided areas (fig. 10). Each area contained classrooms for the use of each individual area.

Access was not gained to the interior of the building; it is not known what changes have occurred to the interior since it was built.

ST. JOHN’S EVANGELICAL LUTHERAN CHURCH
120 N Main St | Lewistown PA

Date Designed: Church: c. 1900
Sunday School Building Extension: c. 1911
Sunday School Building Gallery: c. 1915
Contractor: Church: Enoch Miller
Sunday School Building Extension: H. B. Montgomery

St. John’s Evangelical Lutheran Church was built in three stages. The first stage was the 1892 Chapel located in the middle of the present building. It is unknown if this building was designed by the Dempwolf firm or what the original interior design was. The second stage was a Dempwolf-designed addition of the sanctuary portion to the south of the
original chapel, which would become the Sunday school after completion of the sanctuary (fig. 4). The cornerstone is dated 1900, but the Dempwolf ledger implies the building was not completed until about 1902.\(^1\) The contractor for this portion of the building was Enoch Miller.\(^2\) The final cost totaled $15,850.\(^3\) The third stage was an extension to the north of the Sunday School Chapel and was also designed by the Dempwolfs (fig. 5). It was completed about 1911 for $6,000.\(^4\) The contractor for this portion of the building was H.B. Montgomery.\(^5\) The Dempwolfs also had their hand in the design of a gallery located in the Sunday school. This was completed in 1915 for $443, but the scope of work is ambiguous.

---

\(^3\) Dempwolf, n.d.
\(^4\) Ibid.
\(^5\) York County Heritage Trust 34195, n.d.
The 1900 sanctuary addition is composed of brick, brownstone trim, and a limestone foundation. It was designed in the Romanesque Revival style. The front (south) façade includes a five-stage bell tower at the east corner with the main entrance in the first stage (fig. 1). A front-facing gable wall composes the rest of the elevation with a large, round-arched stained glass window with tracery.

The west side elevation includes a front-facing gable with a large, round-arched stained glass window with tracery in the center (fig. 6). North of the gable are two sets of windows set under a dormer window; south of the gable is a Victorian entrance porch and another set of windows. The east side elevation is very similar to the west side particularly with the center front-facing gable (fig. 2). North of the gable however is a round-arched loggia; south of the gable is a set of windows and the tower. A wood cupola is seen at the crossing of the gable roof.

The interior has changed very little since it was originally designed. Upon entering through the bell tower entrance at the southeast corner, a small vestibule leads directly into the Sanctuary. Three aisles angle down to the altar on the north wall (figs. 3, 7-9).
west of the altar is a room originally known as the Study, an area for the organ, and a choir loft. To the east of the altar is an entrance into the Sunday school portion. The sanctuary sits beneath a simple barrel-vaulted ceiling with an original wood vent in the center.

The Sunday school extension has been almost completely changed from the Dempwolf design. The interior of the extension was essentially one large room on one floor with moveable partitions to separate the different classrooms (fig. 11). Permanent walls enclosed two vestibules, a library, a parlor, and a committee room. The exterior of the extension included a series of paired windows on the clerestory level and a series of tripled windows and doors on the first level. The rear elevation included a hipped roof with sets of windows distributed evenly (fig. 10).

A majority of the extension has been changed, either by additions or complete renovations. Details and dates are not known.

The parish purchased a piece of property for a new church building in 1899 (fig. 2). On January 27, 1901 parishioners met and decided that a brick building was preferred versus a wood-frame building. The cost was to be no more than $15,000 and construction should
The front (west) elevation of the Romanesque-style building is plain (fig. 2). A five-stage tower anchors the southern corner beside a front-facing gable which incorporates three entrances and a rose window (fig. 1). The south and north elevations are nearly identical and are separated into nine bays. The westernmost bay of the north elevation is used as a connection to the parsonage next door. The westernmost bay of the south elevation is taken up by the tower. The remaining eight bays, on both elevations, include a single round-
arched window. The rear elevation is composed of a hipped roof addition.

Then entry vestibule spans the entire front façade. Doors lead into the main auditorium with pews divided by a center aisle leading up to the round-arched apse on the east wall (fig. 4). An ambulatory runs along the rear of the altar and connects the sacristy to the north to the Boy’s Vestry to the south of the altar. A balcony is situated above the east vestibule and is accessed by stairs located in the bell tower. The vaulted ceiling is plain except for a pair of original wood vents (fig. 5).

ZION REFORMED CHURCH
(Mt. Zion United Church of Christ)

12 N Main St | Spring Grove PA

Date Designed: c. 1902
Groundbreaking: July 15, 1902
Cornerstone Laid: October 12, 1902
Contractor: William Siagle
Date Dedicated: December 6, 1903

The congregation of Zion Reformed Church was formed in 1883 at a different site than this building. In 1901, a new pastor was called and plans for a new building were
designed by the Dempwolf firm. On July 8, 1902 the current lot was purchased, one week later ground was broken, and by October 12 of the same year the cornerstone was laid. William Siagle was hired as the contractor, and it cost more than $25,000. The building was dedicated on December 6, 1903.

The late-Gothic building is built of Hummelstown brownstone. The front (east) elevation includes a four-stage bell tower with entrance at the southern corner and a front-facing gable with gothic-arched window in the center (figs. 1, 5). A small gabled entrance anchors the northern corner. The south side elevation includes the bell tower at the eastern corner and a front-facing gable at the western corner (fig. 6). Between the two elements are another small entrance and a series of three windows. The north side elevation includes two front-facing gables (fig. 7). The western gable is plain with two windows; the eastern gable is the exterior wall of the chancel and includes a gothic-arched window to bring in light to the altar. The rear (west) elevation is plain and is composed of four windows. A vented dormer sits at the peak of the roof (figs. 2, 8).

---

4 Mt. Zion Reformed Church, 1932.
The interior of the building is composed of three main spaces (fig. 11). The auditorium space is located at the western end of the building and is accessed through any of the three vestibules. The pews were originally arranged in a semicircle facing the altar centered on the northern wall (fig. 12). Today the pews are parallel to the altar. West of the altar is a space for the organ; east of the altar is a space originally known as the vestry. The auditorium also includes a vaulted ceiling with wood ribbing and vents (fig. 3).

To the west of the auditorium is an Adult Sunday School Room. The two rooms are separated by rolling wood partition walls (fig. 10). The drawings label these walls as “Wilson’s Rolling Partitions (fig. 4).”5 To the north of the Adult Room is an Infant Sunday School Room. Wilson’s Rolling Partitions separate these two rooms as well (fig. 9).

Fig. 12. Original drawings, undated; Seating Plan (York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.).
With the goal of pleasing a larger congregation, the Pastor of St. John the Baptist hired the Dempwolf architecture firm to design a new building. In the early spring of 1904 congregation members began the task of hand-digging the foundation and hauling stones to
be used for the foundation walls. By April 24, 1904 the cornerstone was laid.¹ The contractor, Daniel Bailey,² moved quickly and the building was completed less than four months later. The building was dedicated on August 28, 1904.³ Final costs for construction were $4,675.⁴

The small building was designed in the late-Gothic style and is composed of brick (fig. 7). The symmetrical front (north) elevation is composed of three bays divided by buttresses (figs. 1-2). The side bays include single, gothic-arched windows; the center bay includes a gothic-arched front entrance surmounted by a small bell tower. The east side elevation is composed of two parts. The nave portion of the building is divided into five bays by buttresses, each with a single, gothic-arched window (fig. 1). The apse portion of the building also includes a single, gothic-arched window. The west side elevation is nearly identical, the only difference being that the apse portion cannot be seen as it is attached to

the parsonage at the southwest corner (fig. 2). The rear (south) elevation is simple. The gable roof of the sanctuary is seen above the projecting gable roof of the apse. A single gothic-arched window with tracery is centered on the façade. A small addition at the south east corner has been added since the building was constructed (fig. 3).

The interior of the church is as simple as the exterior (fig. 8). Entered from the center door on the north façade is a tiny vestibule before the nave. A center aisle divides the pews and leads to the apse on the south wall (figs 4-5). A balcony is located at the north end of the room above the main entrance and is accessed by a set of stairs at the northwest corner (fig. 6). The ceiling is vaulted and includes the original wood vents.

ROMAN CATHOLIC CHURCH OF THE IMMACULATE CONCEPTION

310 W Water St | Lock Haven PA

Date Designed: c. 1904
Contractor: Enoch Miller

The Dempwolf design included alterations and additions to the previous brick structure which was much smaller (figs. 2-3). The Dempwolf additions added an octagonal
addition to the southeast corner and nearly doubled the length of the building to the north. Contractor Enoch Miller\(^1\) completed the building for $30,000.\(^2\)

The front (north) façade of the late-Gothic building is symmetrical (fig. 7). Both the west and east corners are anchored by a five-stage tower with gothic-arched entrance and octagonal projections (fig. 4). Between the bell towers is a front-facing gable wall with a gothic-arched entrance in the center and a gothic-arched window above. Near the apex of the gable is a niche occupied by a statue. The west and east side elevations are identical (fig. 8). The bell tower with octagonal projection is located at the north end. A series of seven gothic-arched windows with tracery are divided by buttresses. The projecting octagonal apse and octagonal sacristy anchor the south end of the elevation. The rear (south) elevation is also symmetric (figs. 5, 9). The octagonal apse is centered on the façade and is flanked by the one-story octagonal sacristies. The two bell towers are also seen above the roofline.

\(1\) York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.

Upon entering the building through one of the three entrances on the north elevation, one enters a vestibule which spans the entire length of the front façade (fig. 10). The auditorium is located to the south of the vestibule. The vaulted ceiling includes wood ribbing and vents (fig. 11). Pews separated by a center aisle lead to the original altar on the south wall (fig. 6). An original Priest’s Sacristy is located to the west of the altar. The Dempwolf’s addition added a Boy’s Sacristy east of the altar and an ambulatory to the rear of it. Additionally a balcony is situated at the north end of the building above the vestibule and is accessed by a set of stairs at the northeast corner (fig. 12).

Fig. 12. Original drawings, undated; bottom to top: Transverse Section looking toward Gallery, Transverse Section looking toward Sanctuary (York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.).
After becoming a permanent organization in late 1903, the congregation of Emmanuel Reformed Church purchased a lot for a new building designed by the Dempwolfs (fig. 2). The groundbreaking occurred on May 15, 1904 and the cornerstone
was laid on June 26 of the same year. 1 Contractor C.A. Boyer 2 finished the building by the dedication on November 27, 1904. 3 Final costs for the building totaled $6,000. 4 When the site and furnishings were included, the total jumped to $12,000 (fig. 1). 5

The exterior of the late-Gothic building is composed of brick with sandstone accents; the roof is composed of Peach Bottom slate (fig. 4). 6 The front (south) elevation is symmetrical and dominated by the center, three-stage bell tower (fig. 3). The first stage includes the gothic-arched main entrance. Flanking the tower in each of the side bays is a single, Gothic-arched window with tracery. The west and east side elevations were originally nearly identical. Seven bays divided by buttresses spanned each elevation. Each bay includes a single, Gothic-arched window. The final bay in the east elevation includes a door; the final bay in the west elevation is blank.

---

3 Emmanuel Reformed Church, 1927.

6 New Reformed Church Formally Dedicated, 1904.
When originally built, the interior of the church was paneled in chestnut, cypress, oak, and other woods. Access was not granted to the interior.

A few changes have occurred to the building since its erection. After purchasing land to the west of the church building in 1917 and 1923, the congregation hired another York architecture firm, Witman and Royer, to design a Sunday school building in early 1926. The $150,000 addition was placed to the north and west of the Dempwolf-designed building and was completed in early 1927. Interior redecorating schemes occurred in 1950-51 and 1978. Finally, in late 2004 the congregation vacated the building and held an auction which sold many of the original items within the church. The building is still used as a church today.

GRACE EVANGELICAL LUTHERAN CHURCH

150 Jefferson Ave | York PA

Date Designed: c. 1907
Cornerstone Laid: April 12, 1908
Contractor: J.W. Bushey
Date Dedicated: October 4, 1908
Date Demolished: December 1958

On May 8, 1907 a building committee for the newly formed Grace Lutheran Church was appointed to select a site for a new church building and parsonage (fig. 2). E.A. Dempwolf, church council president and brother of J.A. and Reinhardt, suggested his

Fig. 1. An historic photograph of the front (north) elevation, date unknown (Volker, Deborah L. A History of Grace Lutheran Church of York: 100 Years of “Grace in the City” at the Red Brick Church Down the Block. York, PA: unpublished pamphlet, 2007.).
brothers submit a design for the new building. The first plans submitted were for a bluestone building with a clock tower. Just after the congregation became officially chartered on October 6, 1907, the building contract was awarded to J.W. Bushey on November 8. The cornerstone was laid on April 12, 1908 and on October 4, 1908 the building was dedicated. The final cost for the completed building totaled $12,500.¹

The late-Gothic building was actually built of brick with stone accents, instead of bluestone, as originally planned. The front (north) elevation was composed of a front-facing gable wall with three gothic-arched windows (fig. 1). An entrance porch flanked each side of the gable wall. Additionally, a four-stage bell tower anchored the northeast corner. The west and east side elevations were nearly identical and included a dual-pitched hip roof over a wall with six double-hung windows (figs. 3, 5). A gabled dormer could also be seen on both elevations with included a set of three windows. The rear (south) elevation was plain and symmetrical.

¹ Volker, Deborah L. A History of Grace Lutheran Church of York: 100 Years of "Grace in the City" at the Red Brick Church Down the Block. York, PA: unpublished pamphlet, 2007.
A chimney resided in the center of the façade and was flanked on each side by a door and two double-hung windows.

Upon entering either of the front entrances one entered into a small vestibule. From these two doors led either into the tiered Infant Room at the north of the building or into the main auditorium (fig. 5). These two rooms were divided by movable glass partition walls. To the west of the auditorium, which sat more than two hundred people, were three classrooms; to the east of the auditorium was a Lecture Room which sat more than 125 people. All of these rooms were also separated by glass partition walls. A center aisle separated the pews which led to the chancel on the south wall (fig. 4). To the west of the altar was a Library; to the east was a Study. The interior of the building was composed of plaster walls and cypress woodwork and furnishings.²

Renovations to the interior occurred in 1930, 1940, 1946, and 1947. Beginning in 1921 the congregation began purchasing surrounding land which was owned by the Dempwolf family. In 1946 plans were made to build a new church building for the Fiftieth Anniversary in 1957. Architect Harry Lenker, a former employee of the Dempwolf firm,

² Volker, 2007.
was hired to design the new building. The Dempwolf-designed building was demolished when the new building was completed in 1958 for $185,000.\(^3\)

Fig. 5. Original drawings, undated; clockwise from bottom left: South Elevation, East Elevation, North Elevation, Ground Floor, Section, Basement (York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.).

HOLY TRINITY MISSION CHURCH
(Holy Trinity Episcopal Church)
315 Jones St | Hollidaysburg PA

Date Designed: c. 1909
Cornerstone Laid: October 17, 1909
Date Completed: May 8, 1910
Date Dedicated: May 10, 1910

The site of Holy Trinity Mission Church was purchased in December 1907 (fig. 2).¹ The building committee formed and funds were raised to hire the Dempwolf firm as architects and the cornerstone was ready to be laid on October 12, 1909.² The ceremony

---

occurred five days later.\textsuperscript{3} The building was completed on May 8, 1910 and dedicated two days later.\textsuperscript{4} The cost of construction totaled \$7,010.\textsuperscript{5}

The Tudor-Gothic church was primarily built of stone. The front (north) elevation includes a front-facing gable wall with large Tudor-arched window surmounted by a small belfry in the center (fig. 3). Two projections can also be seen on this elevation: a vestibule extends east from the northeast corner and a half-timbered cross-gable extends west from the southeast corner. The east side elevation includes a projecting stone and half-timbered entrance at the north corner and a series of four Tudor-arched windows with tracery (fig. 1). The west side elevation is composed of a series of three Tudor-arched windows with tracery to the north and a projecting half-timbered addition to the south. The rear (south) elevation is very similar to

\textsuperscript{3} Blair County Historical Society, 1945.

\textsuperscript{5} Dempwolf, John Augustus. \textit{ledger}. York, PA: ledger.
the front façade with a front-facing gable in the center and projections to either side of the building (fig. 6).

The church is entered through the main vestibule on the northeast corner (fig. 5). The nave incorporates a vaulted wood-paneled ceiling with exposed wood rafters (fig. 8). Pews, divided by a center aisle, lead to the chancel on the south wall (fig. 4). The altar area has been altered since originally built. A door on west wall leads to a sacristy, organ space, ambulatory, and choir vestry. A set of stairs has been added to the vestry area which leads to the basement level. In the plans the basement is labeled as “Future Sunday School Room.” It has since been finished and includes an assembly room to the north and kitchen to the south.

ST. JOHN’S EVANGELICAL LUTHERAN CHURCH

28 N 3rd St | Mt. Wolf PA

Date Designed: 1915
Groundbreaking: August 1915
Cornerstone Laid: November 7, 1915
Date Dedicated: September 10, 1916

The congregation of St. John’s Evangelical Lutheran Church was organized July 16, 1914. In the fall of 1914 and spring of 1915 they purchased the town lots that compose the current property. On May 23, 1915 the building committee decided to build a church and

Fig. 1. An historic photograph of the church taken in 1916 from the southeast (St. John Lutheran Church. Saint John Lutheran Church, Mount Wolf, Pennsylvania, 1914-1974. Mt. Wolf, PA: unpublished pamphlet, 1974.).
hired the Dempwolfs to design the building. The groundbreaking occurred in August 1915 and the foundation was ready for the cornerstone to be laid on November 7 of the same year. Construction of the brick building took less than a year and the building was dedicated on September 10, 1916. The final cost of construction totaled $6,308.25.  

The exterior of the building has been changed a few times. Originally the front (east) elevation included a three-stage bell tower with front entrance at the south corner and a front-facing gable with centered serliana window at the north (fig. 1). An addition has been added to the gable wall which covered the window (fig. 2). The south side elevation originally included the bell tower with another entrance at the east corner, a series of three double-hung windows, and a front-facing gable. The gable wall was composed of stone at the foundation level and brick on the first floor and included a series of three windows on each level. In modern renovations the bell tower entrance has been

---

removed and the windows have been altered. Originally the north side elevation featured the octagonal projection which held the altar. Double-hung windows and a door were also located on this elevation. Renovations changed the window and door placement. The rear (west) has been completely covered by a Sunday school addition which was added in 1954-55. Originally the front-facing gable façade was composed of three evenly-spaced double-hung windows on the first-floor and basement levels.

The interior of the building has also been renovated many times. Originally the church consisted on two main rooms: the main auditorium and a Sunday school room (fig. 5). The auditorium was located at the east end and included the altar on its north wall. The Sunday school was located at the west end of the building and was separated from the auditorium by movable partition walls. In the fall of 1942, the church and nave were renovated. In 1961, Dempwolf-trained architect Harry Lenker was hired by St. John’s to redesign the interior of the building. These renovations were completed in 1962. Changes included reorienting the sanctuary to a east-west axis and removing the partition between the two rooms (fig. 4).

FIRST CHURCH OF THE BRETHREN
Sunday School Building
(Abundant Life Ministries)

701 W King St | York PA

Date Designed: 1922
Date Dedicated: December 6, 1923

Eleven years after the original church building was built, the congregation of the First Church of the Brethren formally organized a Sunday school. A larger church replaced the original building in 1900.¹ On April 14, 1922, after recognizing the need for more space for the Sunday school, the congregation decided to construct a new building for this

purpose. The Dempwolf firm was employed to design the Sunday school addition building to the north of the existing church building which would cost between $30,000 and $33,000. On December 6, 1923 the finished Sunday school building was dedicated. Final construction costs totaled $33,500.²

The Gothic Sunday school building is composed of brick with cast concrete accents (fig. 2). The front (east) elevation consists of two crenellated towers on the north and south corners; between the towers is a series of four depressed gothic-arch windows with tracery (fig. 1). These windows are identical to those on the other two elevations. The north side elevation is similar with a tower at the east corner and a series of three windows. The west side elevation is composed of six windows.

The original drawings depict the interior layout as a large Sunday school room in the center with an altar to the south and a large central skylight above (fig. 3). Surrounding the main room were a Primary School Room and Intermediate Room to the west and Class Rooms to the north and east. All of the rooms were separated from one another by rolling wood partitions (fig. 4). Access was not gained to the interior of the building.

The congregation relocated to a suburban church in 1964. The Dempwolf building is still used as a church.

UNION EVANGELICAL LUTHERAN CHURCH

450 W Market St | York PA

Date Designed: 1926
Groundbreaking: March 20, 1927
Cornerstone Laid: January 29, 1928
Contractor: Luther Menough
Date Dedicated: September 19, 1929

Fig. 1. The front elevation (Photo by author).
The city lot next to the original church building was purchased in 1916.¹ In January 1925, the church council decided to hire an architect and the next year, the J.A. Dempwolf firm designed the new Gothic-style building. With J.A.’s death in December of 1926, Frederick carried out the remaining work. In February 1927 Luther Menough was awarded the contracting job with a bid of $201,993. Groundbreaking ceremonies were performed on March 20, 1927. In late 1927, the contracted price came under scrutiny. An additional $25,500 was added to the projected cost for the tower construction. On January 29, 1928 the cornerstone was laid. The stone building was dedicated on September 15, 1929 for a total cost of $322,000.²

The front (north) elevation is asymmetrical and is composed of a five-stage bell tower on the east corner and a front-facing gable with main entrance surmounted by a rose window. A domed turret anchors the western corner of the roof (figs. 1, 6). The east side elevation includes the tower with entrance at the north end, a series of five gothic-arched windows on the first-floor and clerestory levels, a front-facing gable with large gothic-arch window illuminating the transepts, and two gothic-arched windows illuminating the apse (fig. 2).

² Bone, Luther G. Highlights in the History of Union Evangelical Lutheran Church and Sunday School, York, PA, 1859-1963. 1978.
7). The west side elevation is nearly identical; a front-facing gable with single gothic-arched window replaces the tower in this façade (figs. 2, 8). The rear (south) elevation includes a brick portion, at the basement and first-floor level, which is stylistically different from the rest of the building (fig. 9). Above this addition is a large gothic-arch window which illuminates the apse.

The interior of the building is organized in a typical cruciform plan (fig. 5). The nave is divided by a center aisle which leads to the chancel at the south end. The baptistery occupies the eastern portion of the cross; the choir occupies the western portion. A balcony is located at the north end of the nave and is accessed by stairs at the northeast and northwest corners of the building. Gothic-arched windows illuminate the interior of the church from the side aisles, clerestory, and chancel (figs. 10-12). The wood ceiling is in the shape of an inverted ship’s hull.

Fig. 12. Original drawings, dated November 27, 1926; Longitudinal Section looking West (York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.).
The congregation of Trinity Reformed Church dates to 1861 and the present church building was built in 1865-66. In 1875 the Sunday school congregation requested an expansion to their space which occurred to the south of the city church (fig. 2). During a meeting held on January 15, 1915 the congregation decided to hire the Dempwolf firm to design a new educational building with an estimated cost of $21,260. The First World War
delayed its construction. In 1926, the congregation again decided to build the new educational building. The Dempwolf's revisited their previous design and work commenced. The finished building was dedicated in 19271 and cost $68,881 to erect.2

The exterior of the brick Gothic building has changed little since it was built. The front (north) façade connects to the church building, but includes a main entrance at the east corner (fig. 3). The side elevations are very plain. The east side is a brick wall; the west side contains three windows on the second floor. The rear (south) façade includes many of its original Gothic-arch window and door openings; a few changes have been made (figs. 1, 6).

Fig. 2, above. The 1908 Sanborn map shows the church building to the north with the original Sunday school building to the south. The Dempwolf-designed education building would not be built for another nineteen years (Sanborn Fire Insurance Map. “32 W Market St, York, PA.” Pennsylvania State University Maps Library. New York, NY: Sanborn Map Company, 1908.). Fig. 3, below. The front (north) entrance is adjacent to the church portion of the building (Photo by author).

---

Originally the interior of the building was arranged in a typical Akron Plan (fig. 4). A large auditorium was located in the center with a platform chancel to the north. Classrooms and offices were located to the west, south, and east. All rooms were separated from one another by canvas rolling partitions. The second floor included a balcony overlooking the first-floor auditorium and chancel. Surrounding the balcony were tiered classrooms which could be divided by additional canvas rolling partitions. In 1965 the educational building was majorly renovated and essentially gutted. Changes included “new rooms for the choir, totally renovated church school classrooms, a sacristy, a new basement corridor, an enlarged narthex, a parlor, new office for the secretary, and air conditioning…” and cost $245,900.³

Fig. 8. Original drawings, dated January 1927; bottom to top: First Floor Plan, Balcony Plan (York County Heritage Trust Library & Archives. "Dempwolf Architectural Collection." Vertical File 34195.).
St. Mark’s congregation first assembled in 1889. Four years later a brick church was built. By December 1928 a new Gothic-style building was designed by the Dempwolf firm.
The cornerstone was laid in 1929 and the building was completed within the year (fig. 1).\(^1\) Final construction costs totaled $117,464.\(^2\)

The exterior is composed of Plymouth stone and cast concrete accent elements (fig. 3). The front (east) elevation is symmetrical and includes a central four-stage crenellated bell tower with entrance (fig. 2). The north and south side elevations are identical. The tower anchors the eastern portion of both facades. Five bays of single, gothic-arched windows separated by buttresses are located between the tower and the front-facing gable wall of the transept. Side entrances are located at the western corner of both elevations. The rear elevation of the building abuts an education building which was erected in 1960-61.\(^3\)

EVANGELICAL LUTHERAN CHURCH
Sunday School Building

43 S Church St | Waynesboro PA

Date Designed: June 1929
Contractor: A.J. Etter
Date Dedicated: June 29 – July 2, 1930

The Evangelical Lutheran Church congregation built the current brownstone church in 1903. In 1929, a Sunday school addition to the east of the church building was planned.
Frederick Dempwolf was hired to design the building in June 1929. A.J. Etter won the contract with a bid of $96,692 and it was erected within the next year. Dedication services were held June 29 through July 2, 1930. Final construction costs totaled $109,825.35.

Frederick’s design was meant to unite the Sunday school building with the existing church. He matched the Romanesque style and brownstone of the church portion on the west and south elevations, which could be seen from the front of the church (fig. 3). Originally a three-stage bell tower with main entrance anchored the north corner of the west elevation (fig. 1). A series of round-arched, second-floor windows ran along the rest of the elevation. Today the tower is retained but the rest of the façade has been covered over by the administration building which was added in 1971 (fig. 2). The south elevation of the

---

2 Francis, J.M. Services in Dedication of the Sunday School Chapel, Evangelical Lutheran Church. Waynesboro, PA: unpublished pamphlet, 1930.
3 Evangelical Lutheran Church, 1978.
5 Francis, 1930.
Sunday school blends well with the church portion of the façade. A front-facing gable with entrance loggia marks the Dempwolf portion (fig. 10). Three windowed bays separated by buttresses span to the east corner. The east and north elevations are built of brick and contain series of paired double-hung windows along the basement, first-, and second-floor levels (figs. 9-10).

The interior was changed dramatically during the renovations in 1971. Originally the basement level included, from north to south, a Social Room, a large Bible Classroom, a Social and Dining Hall which sat three hundred people, a Serving Pantry, and a Kitchen. These first three rooms were separated by accordion doors. Today the dining hall and kitchen are the only rooms to exist as originally planned. The social room and bible classroom have been subdivided into smaller rooms and the serving pantry has been eliminated (fig. 4).

---

Fig. 4, above. Interior spaces which were once divided by moveable walls have been replaced with permanent walls; however the outline of original openings can still be determined (Photo by author).

Fig. 5, below. The original decorative wood columns which skirted the second-floor balcony are retained between the subdivided spaces (Photo by author).

---

6 Evangelical Lutheran Church, 1978.
The first and second floors were organized into two different spaces (figs. 7-8). The northern portion was planned in a typical Akron Plan. The first floor included a central Senior Department classroom in the center with platform at the west. Surrounding this room on the north, east, and south sides were the Intermediate Department, Young Ladies Bible Classroom, First Bible Classroom, Junior Department, and Mothers Classroom. All of these rooms were separated from one another by heavy “rolling canvas curtains.”\(^7\) The second floor was composed of a tiered balcony of three classrooms overlooking the Senior Department space and Platform (fig. 11). The classrooms were separated by the same canvas curtains. Interior portions of this space were illuminated by skylights. The balcony space has been filled in and the larger classrooms spaces have been subdivided into smaller rooms (fig. 5).

The southern portion of the first and second floors was departmentalized by many permanent walls. The first floor included a Beginners and Primary Department, Ladies Parlor, and Minister’s Study. The second floor included nine classrooms, which were used by different Sunday school departments, and a separated Choir and Council Room and Secretary’s Office. Interior portions of this space were illuminated by skylights. A majority of these spaces have been retained, but some have been subdivided into smaller classrooms (fig. 6).

The prolific but nearly unknown Dempwolf architecture firm designed over six hundred buildings in about sixty years in ten states. Their legacy has been neglected because they were provincial. Most of the firm’s buildings are not monumental, but well-designed fabric buildings that, when combined, create the architectural depth which composes many mid-Atlantic towns. Despite not being stylistic innovators, the firm’s wide range of architectural style use is incredible, particularly when designing with European influences. While lauded locally in York, Pennsylvania as the principal architects of the city, the Dempwolfs deserve the recognition and respect bestowed upon better-known architects of the same era. The firm is representative of many small, late-nineteenth century firms that practiced with the benefit of architectural education, talent, and knowledge of the building trade during a creative and exuberant moment in American architecture. They also benefited from residing in an area that could support them economically.

The churches designed by the Dempwolfs are exemplary models of grand architecture brought to small cities, towns, and rural areas. The firm did not rely on one church design, but rather designed eighty-nine individual buildings which were unique to their location, congregation, and era. These churches serve as models of spirituality within the communities where they stand. The firm, by designing these respectful buildings, became parts of the communities as well.

This thesis was compiled for the congregations and the buildings they occupy, to better define the Dempwolfs’ commitment to architecture, their devotion to their
hometown, and the resulting effect of creating substantial buildings in small cities, towns, and rural areas. Despite the short time lag between when architectural styles were popular and when they found their way to central Pennsylvania and northern Maryland, the designs put forth by the Dempwolfs were exceptional.

On a broader note, this thesis brings awareness to the importance of buildings like these, not necessarily designed by the Dempwolfs, but across America. Preservation of these contextual and fabric buildings and respect for the history they hold of the people who used them, as well as designed them, are our connections to past generations.
APPENDIX

OTHER DEMPWOLF CHURCHES

1880  AFRICAN M.E. CHURCH  
York, PA

The congregation of Small Memorial AME Church sold their previous site for to Billmeyer & Small Co. industrial and economic development for $2,800. A September 1880 agreement between church trustees and B&S promised that B&S would erect, on another B&S lot (fig. 1), “a two story brick church building 3—feet wide by 52 feet deep with pulpit recess 5’-3” deep by 14’-6” wide with slate roof and belfry, altar and pulpit, and second story room furnished.” The plans supplied by the Dempwolfs were agreed upon by both parties. On October 24, 1880 the cornerstone was laid and on August 14, 1881 the church was dedicated. Jerome Heidler was the contractor who built the structure for about $5,000. The congregation moved from this church building in

Fig. 1, above. The 1908 Sanborn Map shows the Dempwolf-designed building which was built in 1880-81 (Sanborn Fire Insurance Map. “African ME Church.” Pennsylvania State University Maps Library. and moved to a third church. The building is now used for commercial purposes. Originally the interior included three rooms. The auditorium and Adult Sunday school room were separated by rolling partition walls and the Sunday school room and the Infant room were separated by moveable glass partition walls.

1911 ZION’S EVANGELICAL LUTHERAN CHURCH
Sunbury, PA

Alterations and additions to the Sunday school building designed by the Dempwolfs cost $12,690.

1911 BETHANY PRESBYTERIAN CHURCH
25 N West End Ave, Lancaster, PA

The original church building was dedicated in 1897. In 1911 the congregation decided to make renovations to the existing building and build a Sunday school addition (fig. 12). The alterations were designed by the Dempwolfs and on April 15, 1913 the newly refurbished building was dedicated. The final cost of construction was $13,800. The building was further altered in 1937-38 and 1954-55, the last campaign changing the entire look of the building. The Dempwolfs were not affiliated with these renovations.

1916  ST. PAUL’S EVANGELICAL LUTHERAN CHURCH  
York, PA  

The original building had been designed in 1868 by Philadelphia architect Stephen D. Button, whom J.A. had worked for when he was working on the Centennial Exposition. J.A. had also constructed many of the wood details for this church when he worked for Nathaniel Weigel’s planning mill. In January 1916 the church council decided to renovate the church and a year later the building is rededicated. Changes to the building included replacing the existing pulpit platform with a chancel, replacing the existing stained glass windows with one large window surrounded by mosaics, rearranging the pews to create a center aisle, replacing the roof, and removing the skylights. These alterations and additions cost $13,560.

1921  ST. PAUL’S LUTHERAN CHURCH  
Harrisburg, PA  
The building of the small, frame chapel cost $11,700 to construct.

1923  GRACE EVANGELICAL
