A great and very much needed improvement on the campus is that of the concrete walks which are now being put down. All of the main streets of the campus are being paved. This adds not only to the beauty of the campus, but also to the convenience of passage from building to building. In rainy weather especially, the old walks would get damp and sloppy, and passage without getting the feet damp was almost impossible. The addition of these walks will do away with this inconvenience, and will add to the comfort and health of the whole college community.

Two years ago, there was considerable work done on the grove on the campus, in the way of clearing it of broken, dead, and decaying trees and patching and preserving all those trees that could be saved. This work was in the right direction, and added very materially to the appearance of the grove. Now, the putting down of the walks is another great step for the college—a step that should receive the loyal support of every individual interested in Clemson's welfare.

Agriculture as a Profession

What does agriculture offer a young man as a profession? This is a pertinent subject for discussion in view of existing economic conditions. A century of indifference towards this matter has resulted in reducing the marvelous yielding powers of our virgin soils to a point where their cultivation is now frequently unprofitable, and has firmly established in the minds of thousands the belief that agriculture offers no opportunities for a life of "service" or the acquirement of wealth. As a result, the cost of living has risen to the breaking point and the brains and energy of the country have been largely absorbed by industrial enterprises concentrated in towns and cities. The desertion of the country is one of the most serious problems confronting our civilization, but it is not surprising that this condition should have occurred in view of the indifference exhibited toward agricultural education in the past and the fact that as a science it is still all but in its infancy.

It has been well said that "the darkest hour is just before
the dawn," and undoubtedly there are better things ahead for the young man who prepares himself to be an agricultural leader than many of our educators yet realize. It has taken a long time to win for this type of training an acknowledgment that it provides a man with the essentials of a liberal education. When it is considered, however, that a good course in agriculture contemplates as thorough preparation for college entrance as in any other department of the university, that at least half of the subjects studied will be for the purpose of developing culture and breadth of viewpoint, while the balance will provide for that essential and technical knowledge necessary to the proper equipment for one's life work in this vocation, it does not seem irrational to conclude that a course in agriculture provides the elements of a liberal education. It necessarily follows that any type of training which brings one in touch with principles involved in some of the fundamental sciences is an interesting and instructive course to pursue. It is an inspiration to be familiarized with the decisions of such great men as Darwin, Mendel, DeVries, Baxwell, Pasteur, Koch, Liebig, Storer, Warrington, and a hundred others who have left such an indelible impression on the sands of time by their efforts as the long centuries will not efface. A type of training such as is contemplated in a modern agricultural college gives variety to one's faculties for it provides not only for the enlargement of the mind, but for the training of both heart and hand. Any course in such an institution worthy of the name will not only impress the minds of its students with the theory of the great and fundamental subjects upon the mastery of which its value depends, but will indicate how these truths may be applied by a thorough and exacting course of laboratory instruction in all applied, semi-applied or purely scientific subjects which properly come within its purview. In addition the principles laid down will be tested in practice through the agency of the college farm, its herds and flocks, and the demonstration plats which collectively constitute its field laboratories for testing the practicability and correctness of the principles and deductions set forth in its classrooms.

Few types of instruction open up such a great variety of opportunities to the young men of the present day and generation, and Georgia is no exception to the rule. A young man who has received a fundamental course of training in agriculture may anticipate success as a farmer, the first, the most profound, and still the noblest occupation of mankind. The man who from "the red old hills of Georgia" takes annually a bale of cotton per acre will garner more wealth from a well-managed plantation than any except the most favored of our professional men. It was said a few years ago in criticism of the agricultural colleges that they did not turn out farmers. The situation is now reversed, and the colleges find themselves in the predicament of not being able to offer their own graduates large enough salaries to induce them to leave their farms and engage in its service. This statement may be seriously questioned by some, but it has happened repeatedly in the experience of the writer in the past five years. Cheap land may now be had, but not for long. The young man who owns it or may acquire it should not lose the golden opportunity of today. The time has passed when it can be truthfully said that there is no money in farming provided science is the handmaid of the tiller of the soil.

This is but one of many directions in which the agricultural leader may specialize. He may become a constructive statesman, an economist, and still live on his broad acres. What nobler life could one desire? He may become a teacher, either in a college, a specialized secondary school, or an ordinary high school. The country is calling for thousands of men of this character. He may become a research worker in one of our many experiment stations or in the United States Department of Agriculture, and

THE CLEMSON AGRICULTURAL COLLEGE

of South Carolina.

(State Agricultural and Mechanical College.)

Telegram and Mail Address: Clemson College, South Carolina.

COURSES OF STUDY.

The above are four year courses. In addition, short courses are given in Agriculture and Textile Industry. (For details, see College Catalogue.) Second term begins Jan. 3rd, 1911.

EXPENSES.

The regular fees for the session, not including tuition, are as follows:

Incidental fee... $5.00 Payable Quarterly.
Medical fee...... 5.00
Uniforms........ 29.18 September 7, 1910... $61.31
Breakage fee..... 3.00 November 9, 1910.... 19.13
Board, washing, heat, January 25, 1911.... 19.13
light, etc......... 76.52 March 29, 1911.... 19.13
Total........... $118.70 Total......... $118.70

Tuition students pay $10.00 per quarter additional. Free tuition is allowed only to South Carolina students. Books and other necessary articles will be furnished by the College at an approximate cost of $30. Each student must provide himself with four sheets, two blankets, one comfort, six towels, two pillow cases, one pillow and two single mattress covers. For catalogue and further information, address

W. M. RIGGS, Acting President.

If he be so fortunate as to delve into the mysteries of nature and bring even one iota of truth to light for the benefit and mollification of human conditions, surely he has a reward better than great riches can offer. He may become an active agent in the service of his state in one of many directions. He may become an analyst and serve the interests of such great business organizations as our cotton seed and fertilizer industries. He has an opportunity to serve his country as an editor. He may become a plant breeder and furnish his friends and neighbors with superior strains of seed to grow. He may also become a breeder of live stock and mold and develop the animal life about him into types of superior merit.

Surely this is an alluring array of activities to engage and fire the imagination of the young men of Georgia and of the South. It has been said that patriotism ranks next to the religious instinct. The South is calling for leadership and redirection in her greatest industry—that of agriculture. Will the young men respond to her greatest need? If they do so and are honest and conscientious in their efforts, rewards greater than riches can purchase, opportunities wide as the world, and privileges surpassed by no vocation will fill their days with pleasure and their nights with well earned repose.—The Red and Black.

Our general secretary, Mr. Robt. L. Sweeney, returned last Friday afternoon from his home in Texas, where he had been spending the Christmas holidays with his parents and friends. We are very glad to have him back with us; and, also, to know that he had a jolly good time during his Christmas vacation.

The Y. M. C. A. held its first religious meeting for this year Sunday afternoon, January 8, 1911. At this meeting Dr. Cromer, who is an ex-president of Newberry college, and is now practicing law in the town of Newberry, made an address which was enjoyed very much by all who were present. The theme of his address was based on a verse from the Psalms, which was, "ere with shall a young man cleanse his own ways?" In his discourse he emphasized the lack and need of good character among men, which is their only true possession; and the necessity for good character, if men are to take the part in life's work that they should. He said that a true character was obtained from studying and practicing the teachings of the Bible. To show that this statement was true, he gave the names of several men who said that a study of the Bible had played an important part in the formation of their characters. The names of some of these men are Huxley, Scott and Woodrow Wilson.

Fellows, this is the beginning of a new year, and we desire to make it one of the best in the life of the Y. M. C. A. work at Clemson College; so, in order that we may make it one of the best, we ask the co-operation of every boy in barracks, whether he is a member of the Y. M. C. A. or not.

FARMING WITH EXPLOSIVES.

The Du Pont Powder Company has recently been carrying on some experiments with land and stump blasting with dynamite. These experiments were carried on at the South Carolina experiment station. The director, Prof. J. N. Harper, is determined to find out the value and practical application of dynamite for these purposes. The members of the agricultural courses of the Senior, Junior and Sophomore classes were taken by Prof. Perkins to see the experiments in land blasting.

This method of land breaking is attracting much attention at the present time, and it is hoped that it will prove to be an economical farm practice.

EDITORIAL
Christmas is a thing of the past, but the narratives of the gay times are yet heard from the lips of everyone. Such a time as the Christmas holidays is always welcomed by the student; for it serves to break the monotony of the daily routine of class work.

Have you made your New Year resolutions yet? If not, you should form some at once. Every member of the corps should resolve to make a better class mark during the next five months. He must work hard in order to obtain a good average. A college credit will be earned by subscribing and contributing to the "Tiger," "Chronicle," and "Taps," and in all his power to uplift and rebuild the grand old institution of Clemson College, of which we should all be proud.

Class football has begun; and, at present, is the only source of amusement for the boys. But class football was not instituted solely for the purpose of amusement. It is intended to train men in the details of the game, and to develop material for the subsequent varsity and scrub teams. Members of the Junior, Sophomore, Freshman, and Preparatory classes should be on the football; not only for the sake ofvarsity spirit, but for the purpose of preparing to furnish the largest possible number of men to the team for the next season. The class team this year should, and doubtless will, mean more than aerobics; because of the fact that Coach Dobson is with us to see to the coaching.

It will be remembered that the Christmas issue of the "Tiger" contained a letter from the general secretary of our Y. M. C. A., Robert L. Sweeney. This letter had reference to the organization of a press club at Clemson. Now, there is no work in which a student can get better training than he can in writing for a paper; and great good can be done incidentally to the college, by having writings of the proper spirit and nature published in our home papers. The fact that Clemson College is constantly brought before the people of the State by politicians should cause every loyal Clemson cadet to strive to help put before the people the facts and figures of our work. As Mr. Sweeney has said, all large institutions have press clubs; and Clemson for the reasons given and many more, should have a press club also. All those who care to consider the matter of organizing a press club are asked to consult with the editor-in-chief of the "Tiger." Mr. Sweeney has consented to give any information desired as to the details of organization.

EXCHANGES
"Kyle Field," the athletic field of the A. & M. College of Texas, is said to be the finest athletic field in the southwest. It is lined up with lights, and hydrants have been put in for use on the field at any time.

The "Correspondents Club" of the University of South Carolina has been organized with the purpose of giving each county paper the news of the University. This is a good means of advertisement, and should be followed by other colleges.

There are 889 men enrolled in Bible study at Cornell University.

The libraries at Yale contain some 600,000 volumes. The Yale faculty consists of 185 members. Out of 16 former University of Pennsylvania "stars" only two speak favorably of the new football rules. The new plays are considered more dangerous than the old ones.

The weekly periodical of one of the large Northern girls' schools, states that the school's swimming pool has a capacity of 60,000 "gals."

The University of Oklahoma has celebrated the third anniversary of the statehood of Oklahoma.

The University of California now claims to have a greater cow than the 23-quart Josephine of the University of Missouri, in Teke Leon, which gives 49 quarts a day.

The latest novelty in the way of newspaper publication will appear shortly at Jackson, La. It will be issued by inmates of the insane asylum there. The paper will be published "every once in a while," and will be called "The Bulletin."

There was once a man who said that college life had two serious faults: politics and term examinations. They tried to kill him, but was he wrong?

A rattlesnake ought to be a good story teller, because he gets off such a rattling good thing in the shape of a tail.

When your heels hit hard and your head feels queer,
And your thoughts foam up like the foam on beer,
When your legs are weak and your voice is strong,
And you laugh all over at some fool song,
You are drunk, by gosh, you are drunk!

Harvard has instituted a system under which every freshman has a senior appointed for his adviser.

Here is how the S. I. A. A. teams stack up:
1. Auburn and Vanderbilt.
2. Sewanee.
3. Georgia.
4. Tech and Mississippi.
5. Miss. A. & M.
6. L. S. U.
7. Clemson, Mercer and Alabama.
8. Tulane.
9. Georgia Tech and Mississippi.
10. Texas Tech and Texas A. & M.
11. Tennessee.
The holidays are over and our men have returned to college feeling better for the few days of recreation and pleasure. I am speaking for almost every man when I say that the Christmas vacation was a most pleasant and happy one.

The work of the Junior class during the first term was very successful. Only a few failures were made during the work of the past term. The second term is now started and it is up to us to do our best both for the sake of ourselves and our class. Let us get our class united and then let each man work to be a credit to it.

Class football is now on, and the Junior class is expecting to put out the cup-winning team this year. Mr. H. F. Rivers has been elected as manager of the class team, and Messrs. H. S. Konnerly and F. L. Ross have been elected as chief rooters. With these two men leading the rooters, the Juniors on the sideline should play half the game for our team. Let every man come out and help the team by rooting if he can't play. The coaches have not yet been selected, but will be at an early date. Messrs. O. B. Brodie and W. G. Perry have returned to college and taken up work with our class. We welcome them.

Messrs. J. A. Bates and D. L. Hawkins have not yet returned to college since the holidays, but will return within the next few days.

The first meeting of the new year was decidedly a success. The house was fairly well filled with members and visitors; and what it lacked in numbers, it more than made up for in enthusiasm.

Mr. Small opened the exercises by delivering an excellent declamation entitled "The Wages of Guilt." Mr. Crawford followed with an oration dealing with poverty, and the economic conditions that surround it. He pointed out the dangers to any country where some grow enormously rich while others grow continually poorer.

The essayist and the reader were absent. The regular debate was then taken up. The query, Resolved, "That Kissing Should be Made a Crime," proved to be a good one to stir the young Calhouns to eloquence. The affirmative was ably represented by Messrs. Lawrence, Anderson, and Taylor. Their main point was that thousands and thousands of microbes lurk on the lips of every human. They pointed out vividly how a lad or lass might catch death from one innocent kiss. Messrs. Ross, Salley, and Bowell, on the negative, saw things quite differently. As Mr. Ross said:

If germs do lurk on every lip
To give the kissing man the grip,
Where is the man who'd care to be
Gripless throughout eternity.

Why such a man is but a worm;
True men will cry "Bring on your germ!"

Mr. Salley thought that men were no less brave now than in the good old days of chivalry. In those days the young knight fought dragons to win his fair lady love. Then, what is a microbe, as compared to a dragon? The negative had decidedly the advantage; for both the house and the judges were in sympathy with that side from the beginning, as was shown by the continual applause that was given for the negative. Both the house and the judges decided in favor of the negative.

Mr. Jeter, from the Palmetto Society, visited us and gave us an interesting talk on the relations that the literary societies bear to the college publications. The treasurer informed us that most of the members that were delinquent in fines and dues before Christmas have paid up. We sincerely hope that the members will keep this matter straight from now on. The society cannot do its best work with a long list of delinquent members.

We have five months before us. Let us strive to make them the best in the history of the society. The amount of good that we get from literary society work is measured by the amount of work that we put into it. What will you reap?

---

The first meeting of the Palmetto that has been held this year was called to order last Friday evening by the president, Henderson, W. N. The meeting was characterized, as usual, by good attendance and by an enthusiastic response on the part of every man who was on duty.

During the term just ended, the Palmetto has certainly excelled any of its former records on both attendance and good work. And here is hoping that the loyalty which was shown by every man last term may continue until we have made the present year's work even more brilliant. So far as the debaters ar-

guments go. 50 per cent of the Clemson College fertilizer tax should be given to state agricultural high schools. Those who substantiated the facts and arguments for the affirmative were: Messrs. Moore, D. P., Fields, B. G., and Gilliam, C. R. Those on the negative were: Messrs. Garrett, W. C., Gentry, T. C., and Steele, E. P. The judges were Messrs. Jeter, Prosser and Hunter.

Mr. Gilmore, J. L., rendered a declamation. Mr. Paris, C. G., read an interesting essay on the Chickamauga national military park. Mr. Egerton, H. C., gave the society a good spur-of-the-moment speech on "Will Power." Mr. Aycock, R. G., was elected a member of the society.

Football practice for the Sophomore class began on Saturday afternoon, Jan. 7, 1911. Excellent class spirit was shown by the large crowd which came out for practice. Among the players were: T. F. Massey, E. T. Provost, G. A. Middleton, F. H. Barnwell, M. F. Sanders, A. J. Evans, J. R. Lomax, L. F. Wolfe, C. G. Faris, and H. A. Heriot. The coaches for the team are W. H. Hanckel and S. Y. Tupper.

We are sorry to note that R. A. Alexander and J. E. Beard did not return after the holidays.

Christmas has come and gone, and now we have to look forward to June. We have all come back determined to do better work than ever.

At a recent meeting, Mr. Joe Douthit was elected manager for this year's football team. We are sure that it would have been hard to have found a better man, as he was a star on last year's team.

Coach Dobson gave us quite an interesting talk on football, Friday. We are glad to see how enthusiastically the boys responded to his invitation to try for the class football team. With such a start, we feel sure that the cup is within our grasp.

Causey said he would try to make "paper-weight" on the team.

Clarke, from Midland Park, reports to have had a very pleasant trip home in the Pullman, disturbing himself only in the middle of the night to try and turn the "vets."

ETIWAN FERTILIZER CO., CHARLESTON, S. C.
THE FOURTH LYCEUM ATTRACTION.

On Saturday evening, January 7th, the Cambrian Glee Club gave the fourth and most enjoyable lyceum entertainment so far this season.

The club was composed entirely of male members—twelve in number—and all of them were natives of Wales. They came very highly recommended—were said to have entertained audiences on both sides of the globe, and they certainly upheld their reputation here. The performance began promptly at 8 o’clock; and then, throughout the entire evening, the audience was not only entertained, but were amused and elated at the songs and impersonations of the actors.

The club was cheered heartily and frequently from the beginning to the end of the performance; and each one who attended expressed himself as being well pleased, to say the least, with the entertainment. We hope that it will be our good fortune to have the Cambrian Glee Club with us again.

CLASS FOOTBALL.

With the beginning of the second term, comes football again. This time, the class games. Much interest is being shown, and all classes are well represented on the field, except the seniors, who will not put out a team this year.

The number of freshmen on the field is gratifying, and the outlook for some good material in the future for the varsity is bright.

Coach Dobson has general charge of the coaching, but each class has elected individual coaches for its team as follows: Freshman, Bissell and Dobson; Sophomores, Hanckel. The Preparatory and Junior classes have not elected coaches as yet.

The following complimentary letter was received by President Riggs some time ago:

"Dr. P. H. Mell, President,
Clemson Agricultural College,
Clemson College, S. C.

"Dear Sir:—
"Referring to the correspondence we had in the fall of 1909 in regard to a prize offered by the Du Pont Company for the best papers on ‘The Use of Explosives in Agriculture’ to be submitted by the students at the various agricultural colleges throughout the United States:

"We would advise that the two papers submitted by students of Clemson College have been read by the judges passing on these papers, and that the judges have recommended the award of first prize to John P. Stickley, Clemson College, S. C., and of the second prize to Hugh R. Clinkscales, Blythewood, S. C.

"We take pleasure in advising that the recommendations of the judges have been complied with and that the above have been notified of the awards and checks for $100.00 and $50.00, respectively, sent to them.

"Yours very truly,
F. H. Gunsoble,
Manager Technical Division,
E. I. Du Pont De Nemours Powder Co."
