PART II

PART II—Information

GENERAL INFORMATION

Clemson is a land-grant, state-supported university. Clemson is fully accredited by the Southern Association of Colleges and Schools. Curriculums are accredited by the American Chemical Society, Engineers' Council for Professional Development, National Architectural Accrediting Board, and Society of American Foresters.

The forty-seven undergraduate and forty-four graduate curriculums under the Colleges of Agriculture and Biological Sciences, Architecture, Education, Engineering, Industrial Management and Textile Science, Liberal Arts, and Physical and Mathematical Sciences, the School of Nursing, and the Graduate School form a background of training for the hundreds of occupations and professions in which Clemson graduates engage. The University is organized on a basis whereby it retains a clear entity through the interrelationships of colleges, school, and departments providing a well-balanced fundamental and general educational program.

The enrollment of Clemson has grown from 446 students at the opening of the University in 1893 to 7,021 for the first semester, 1969-70, including 278 at the Greenville and Sumter campuses. Since the opening of the University, through the first semester 1969-70, 58,306 students have attended Clemson, and of this number, 20,474 have been awarded the bachelor's degree. During this same period, 69 associate degrees, 1,357 masters' degrees, and 151 Doctor of Philosophy degrees have been awarded.

ADMINISTRATIVE ORGANIZATION

The government of the University is vested in a Board of 13 members, including 6 elected by the Legislature and 7 life and self-perpetuating members, in accord with the Clemson will. The President of the University is the chief executive and administrative officer appointed by the Board of Trustees; and under the President there are four areas of administration, each headed by a chief administrative officer responsible to the President. REQUIREMENTS FOR ADMISSION

To receive consideration for admission to Clemson, the applicant must, as a rule, present a transcript of his high school record giving evidence of graduation, and submit an official copy of his scores for the College Board tests used as an entrant examination. In reaching an admissions decision, the examination scores along with the student's academic preparation, rank in class, and the recommendation of the high school principal will be weighed carefully.

In addition, students may qualify for entrance by:

(1) Achieving satisfactory scores on the College Board examinations and presenting a South Carolina High School Certificate (awarded by certificate examination). This provision applies only to adult candidates 21 or more years of age or to those who have served at least two years of active duty in the Armed Forces.

(2) Achieving satisfactory scores on the College Board examinations and completing a minimum of 12 high school units. Students in this category must achieve above average scores on the entrance examination, and have superior high school records.

(3) Achieving satisfactory scores on the College Board examinations and meeting the additional requirements for entrance with advanced standing. As minimum additional criteria, the transfer applicant must present a statement of honorable dismissal from the institution last attended, an original transcript of his record from each college or university attended, and an official statement that he is eligible to return to the institution last attended. Candidates meeting these requirements will then be considered carefully in the light of the quality of their previous record, and work completed in other colleges with a grade at least one letter grade higher than the lowest passing mark will be evaluated in terms of equivalent courses in the curriculum at Clemson selected by the student.

Finally, various nonintellective factors will be considered in a few cases where it is impossible to make a positive decision on the strength of aptitude and previous academic performance alone.

There is no application fee, but an admissions deposit is required following the issuance of a provisional acceptance. Instructions concerning this deposit will be included in the acceptance letter.

Application Forms. Forms to be used in applying for admission to the University may be obtained by writing the Office of Admissions and Registration, Clemson University, Clemson, S. C. 29631.

Entrance Examinations. With the single exception of those who already hold a bachelor's or higher level degree from an accredited college or university, all candidates for admission to Clemson on the undergraduate level must complete the College Entrance Examination Board Scholastic Aptitude Test. In addition, all candidates, with the exception of these transferring acceptable college credit in mathematics, should take one of the mathematics achievement tests. Although the score earned on either of the mathematics tests will be considered, it is suggested that candidates take the Level I examination. Applicants who have completed the required tests previously are advised that for a fee of \$2 and upon request, the College Entrance Examination Board will furnish Clemson an official transcript of scores. Unofficial score reports from other sources are not acceptable.

Applicants who will have completed two or more years of high school French, German, Russian, or Spanish and who will enroll in a curriculum which includes a modern foreign language should take the appropriate language achievement test. These candidates may qualify for advanced placement with credit in language on the basis of a satisfactory score on this test.

Applicants may secure a BULLETIN OF INFORMATION and an application for the tests from their local high school principal or guidance counselor. Should this literature not be available at the high school, the applicant may write to College Entrance Examination Board, P. O. Box 592, Princeton, New Jersey 08540 (Box 1025, Berkeley, California 94701, for Western residents), requesting a BULLETIN OF INFORMATION, COLLEGE BOARD ADMISSIONS TESTS and a test registration form.

All candidates are reminded to forward applications for the entrance examinations as indicated in the Bulletin of Information, and not to Clemson University.

Applicants for enrollment in Architecture must also take the ARCHITECTURAL SCHOOL APTITUDE TEST which is given at most schools of architecture in November, January, and March. Applications for this test may be obtained from a school of archi-

ture or from Educational Testing Service, Princeton, New Jersey 08540.

Three other very important points are:

(1) Be sure to list Clemson on the application for the College Board examinations as one of the schools to receive your scores.

(2) Consideration will be given to your examination results only in the event that an official application for entrance to the University is on file in the Admissions Office.

(3) Up to five weeks is required for College Board to furnish scores, and you must schedule your tests at a date sufficiently early to allow time for them to be received prior to your anticipated entrance date.

Advanced Placement by Examination. In addition to earning credit by the usual method involving classroom attendance, students may receive credit toward their degree by completing a course successfully by examination only. Freshmen interested in exempting some of the elementary courses in this manner should participate in the College Board Advanced Placement Examination program, and have the results of these tests sent to Clemson.

Matriculation. Upon arrival for the opening of the session, new students report to the Office of Admissions and Registration to complete enrollment. A student's matriculation is equivalent to his pledge to conform to the rules of the institution. Any admission gained or matriculation made irregularly is subject to cancellation.

Students from Other Countries. A limited number of well qualified students from other countries are accepted. The application for admission must be in English on the official application form furnished by the Office of Admissions and Registration. Official transcripts of all high school and college level work which the applicant has undertaken should accompany the application. They must also complete the entrance examination requirements discussed previously, although in a few unusual cases a substitute examination is authorized.

In addition to academic and personal qualifications equivalent to those required of United States citizens, the applicant from another country is required to submit evidence of his possessing dollar resources adequate without assistance from the University for at least the first year of his course of study, including round trip travel expenses. The University is unable to grant scholarship or loan assistance to students from abroad, and there is little likelihood that any type of employment may be secured.

If accepted, students from other countries should have a minimum of \$1,200 in their possession upon reporting to the University. This amount is sufficient to make the entrance payment which includes tuition, fees, and living expenses for a semester, and for books and supplies. Foreign students will also be required to purchase student accident and health insurance.

EDUCATIONAL BENEFITS FOR VETERANS AND WAR ORPHANS

The Veterans Administration provides educational assistance for veterans and children of deceased or totally disabled veterans who meet requirements of applicable laws and regulations. Any veteran or child of a deceased or totally disabled veteran should communicate with the nearest Veterans Administration office to determine whether or not he is entitled to any educational benefits.

SELECTIVE SERVICE REGULATIONS

Registration. For the benefit of students who become 18 years of age during the school year, provision has been made for such students to register for Selective Service in the Office of Admissions and registration on the campus. The registration is then sent through channels to the registrant's local board.

Deferment. The following Selective Service Regulations published in the summer of 1967 are quoted for the guidance of undergraduates:

"In Class II-S shall be placed any registrant *who has requested such deferment* and who is satisfactorily pursuing a full-time course of instruction at a college, university, or similar institution of learning, such deferment to continue until such registrant completes the requirement for his baccalaureate degree, fails to pursue satisfactorily a full-time course of instruction, or attains the twenty-fourth anniversary of the date of his birth, whichever occurs first.

"In determining eligibility for deferment in Class II-S, a student's academic year shall include the 12-month period following the beginning of his course of study.

"A student shall be deemed to be satisfactorily pursuing a full-time course of instruction when, during his academic year, he has earned, as a minimum, credits towards his degree which, when added to any credits earned during prior academic years, represent a proportion of the total number required to earn his degree at least equal to the proportion which the number of academic years completed bears to the normal number of years established by the school to obtain such degree. For example, a student pursuing a

four-year course should have earned 25% of the credits required for his baccalaureate degree at the end of his first academic year, 50% at the end of his second academic year, and 75% at the end of his third academic year.

"It shall be the *registrant's* duty to provide the local board each year with evidence that he is satisfactorily pursuing a full-time course of instruction at a college, university, or similar institution of learning."

EXPENSES

Settlement of University Fees. The schedule of semester charges for all undergraduate students—full-time, part-time, and auditing—is shown on the pages which follow. The entire semester's expenses are due and payable at the beginning of each semester, and no student is officially enrolled until all semester expenses have been satisfied. In special cases the University will accept at the beginning of a semester a non-interest bearing promissory note for a portion of the semester residence-hall rent and semester-plan board fee. Amounts up to \$65 for room rent and \$115 for board fee may be included in the note. In such cases, a note for the first semester charges will be due October 10, and a note for the second semester charges will be due March 1.

A \$60 advance payment of room rent is required for a room reservation for the fall semester. This payment must be made by cash, check or money order and should be sent to the Residence Halls Manager's Office with the completed "Student Application for Room Reservation" card not later than July 1. The \$60 advance payment of room rent will be deducted from the amount otherwise due for the first semester's expenses. All other transactions relating to payments should be conducted with the Accounting Division. All checks and money orders should be made payable to Clemson University. A personal check given in payment of University expenses which is returned by the bank unpaid, immediately creates an indebtedness to the University.

The University reserves the right to adjust charges to current costs.

Past Due Student Accounts. Any indebtedness to the University which becomes past due immediately jeopardizes the student's enrollment, and no such student will be permitted to graduate or register for a subsequent semester or summer school term. Further, any student who fails to pay all indebtedness to the University may not be issued an honorable discharge, transcript, or diploma.

Refund of Academic Fees for Students Enrolled for Less than a Full Semester. No adjustments in charges will be made on a semester's tuition and fees after five weeks from the date classes begin for the semester. Charges for periods of attendance of five weeks or less during a semester shall be made on the following basis:

Two weeks or less	20%
More than 2 but not more than 3 weeks	40%
More than 3 but not more than 4 weeks	60%
More than 4 but not more than 5 weeks	80%
More than 5 weeks	100%

Special provision has been made for a student who is required to discontinue his enrollment to report for active duty in the Armed Forces of the United States. Such students shall be charged for tuition, maintenance and activity fee, and medical fee on a daily pro rata basis, holidays excepted, instead of the percentage basis stated above, provided that such discontinuance of enrollment is the result of circumstances, conditions, or actions over which the student has no control.

Refund of Dining Hall and Residence Hall Fees. Specific information relating to living-expense refunds is given in the sections on dormitories and dining hall.

Late Registration Fee. To prevent or reduce the problems incident to late registration, registration schedules are set for specific days, and certain definite procedures are outlined. A student has not completed registration until all of the required steps are taken, the final one being the return of the properly signed Class Registration Card to the Office of Admissions and Registration. Any student who fails to register for classes on the prescribed class registration days will be charged a late registration fee of \$10. This late registration fee applies to full-time and part-time students.

Late Payment Fee. Any student who registers for classes on or before a designated date each semester has three additional working days to make satisfactory settlement of all expenses without being charged a Late Payment Fee. Once begun, a Late Payment Fee of \$5 per day will be charged until satisfactory settlement of all fees is made.

Definition of Residence for the Purpose of Determining Status for Enrollment in Clemson University

1. A resident student is one who was continuously domiciled in South Carolina for twelve months immediately preceding his initial enrollment in the University. The term "domiciled in South Carolina" excludes those students in the State primarily to attend the institution and whose abode in South Carolina has been established as a technical bar to the higher tuition and fee charges.

2. Attendance at an educational institution is usually interpreted as temporary residence. Accordingly, a student neither gains nor loses residence solely by such attendance. Registration for voting, the act of voting, purchase of property, payment of taxes and employment in South Carolina are not necessarily by themselves proof of residence in the State for the purpose of enrolling in the University; nor does birth in South Carolina or direct descent from

South Carolina forebears necessarily prove domicile in South Carolina.

3. The residence of a married woman is that of her husband, if living together; however, a wife not living with her husband may establish separate domicile. A non-resident woman who marries a resident of South Carolina shall be accepted as a resident student at the beginning of the next semester following such marriage; and a resident woman who marries a non-resident shall keep her residence status so long as she maintains continuous enrollment in the University. A non-resident man who marries a resident woman does not thereby gain resident status.

4. The residence of a minor child (under 21 years of age) is that of the father; or of the mother if the father be not living or if the parents are separated and the child habitually resides with the mother; or, if both parents are dead, with his legally appointed guardian, or anyone else with whom he habitually resides in the absence of formal legal designation.

5. A minor may become emancipated (freed from parental domicile) through marriage, formal court action, abandonment by parents, or positive action on his own part evidential of his alienation or parental domicile. To qualify under the latter category, a minor must have completely separated himself from the parental domicile and have proved that such separation is complete and permanent. Mere absence from the parental domicile is not proof of its complete abandonment. If an applicant can provide adequate and satisfactory proof of complete emancipation and of his having come to South Carolina with the intention of establishing domicile, he may be granted resident classification at the next enrollment occurring after the expiration of twelve months following establishment of domicile, excluding time spent as a student at the University. The burden of proof of domicile and emancipation shall be upon the applicant.

6. If it is established to the satisfaction of the University that parents have moved to South Carolina with every intention of remaining permanently and establishing themselves as citizens of the State, the dependent children of such parents may be classified as resident students at the first enrollment after the parents move into the State. If the parents of a resident student move to another state with the intention of establishing domicile there, the student shall at the first enrollment after twelve months from the date of establishment of said home by his parents be classified as a non-resident student; however, the student may continue in resident

status if he reaches 21 years of age within the twelve-month period, or if he establishes evidence of emancipation.

7. A person enjoying majority privileges (over 21 years old or an emancipated minor) who has resided in South Carolina continuously for twelve months immediately preceding his initial enrollment in the University shall be classified as a resident. If, after enrollment, such person can provide adequate and satisfactory proof of his establishing domicile in South Carolina and his intention to remain permanently as a resident of the State, he may be granted resident classification at the next enrollment occurring after expiration of twelve months following establishment of domicile exclusive of time spent as a student at the University.

8. Dependents of members of the Armed Services and Federal employees stationed in South Carolina are permitted to attend the University, if accepted, by paying resident fees without regard to resident status, provided that if such military personnel or employees are ordered away from the State, their dependents may continue to have this privilege while they attend the University.

9. Children and dependents of regularly employed Clemson University personnel are permitted to attend the University, if accepted, by paying resident fees without regard to residence status, provided that if such person terminates University employment and departs the State, the child or dependent may retain this privilege so long as continuous enrollment is maintained in the University.

Any student or prospective student in doubt concerning his residence status must bear the responsibility for securing a ruling by stating his case in writing to the Dean of Admissions and Registration.

Books and Supplies. The cost of books is not included in the Schedule of Semester Charges. The cost of books and supplies at the beginning of the semester will be approximately \$50, except for students enrolling in Architecture the cost will be approximately \$75.

Student Depository. For the convenience of students, the University operates a depository in the Bursar's Office where money can be deposited and withdrawn as the occasion may demand. This service is purely local. Students are urged to deposit their money and not to keep it in their rooms.

Optional Expenses. It is not possible to give an estimate of a student's expenditures for such amusements as dancing, motion pictures, etc. This depends largely upon the disposition of the student. The University endeavors to reduce to a minimum the tempta-

tion to spend money needlessly, but the authorities cannot be responsible for a student's private expenditures. This must be a matter between the student and his parents.

Transcripts. Official transcripts of scholastic records are issued on request. One transcript is furnished free; additional copies are issued for \$1 each. Remittances for transcripts should be made payable to Clemson University, but should accompany transcript requests and should be mailed to the Office of Admissions and Registration.

STUDENT HOUSING

The University residence halls will accommodate 5,190, two students being assigned to a room. The University also has 289 individual units for its married students. All unmarried first-year students entering the University for the first time, not residing with parents, guardians or close relatives, are required to live in University owned residence halls. After the freshman year, students under twenty-one years of age may secure permission to live off campus by having parental permission on file in the Residence Office and approval of the Office of Student Affairs. Students who are assigned a room in University residence halls will be required to sign a Clemson University Residence Hall Contract relating to terms and conditions of occupancy for the full academic year.

Application for Residence Hall and Advance Payment. An application for residence hall accommodations will be forwarded to those students who are accepted by the University for the fall semester. These applications are to be completed and returned with a \$60 advance room payment to the Residence Hall Manager's Office at the earliest practicable date.

Students who have made an advance payment and later decide not to enroll or to live in the residence hall may obtain a refund of the advance payment provided notification of intent and request for refund is received at the Residence Hall Manager's Office prior to July 1. When such notification and refund request is not received by the deadline date, no refund of advance payment will be made.

Refund of the advance payment will not be made to students who apply for assignments after July 1.

Normally, residence hall accommodations are available to those students who enter the University at the beginning of the second semester, therefore, the advance payment is not now required of students entering at this time.

Assignment Preference. Students should indicate on their application their preference of room(s) and roommate. Priority of room

assignments is given to continuing students who file application and make advance room payments during the priority periods established by the Residence Halls Office. Preferences will be honored provided space is available in the desired residence hall and the request does not require exceptions to existing assignment procedures.

Notification of Assignments. As soon as room assignments are made, students are advised of the assignment and furnished information regarding occupancy.

Assignment Changes. Students who desire to move from the assigned room may apply at the Student Residence Office to change rooms. A service charge of \$4 is charged for moving, also charges will be made for students moving from a lower- to a higher-rated room. Rental refunds are made to students moving from a higher- to a lower-rated room on a prorated basis.

Opening and Closing of Residence Halls. The University residence halls officially open for undergraduate students at 8 p. m. the day prior to matriculation date for new students and close at 8 p. m. the day scheduled for graduation exercises of the term or semester. Residence hall fees cover only the time between the day before matriculation and the scheduled date of graduation exercises or end of term when no graduation exercises are scheduled.

For official holidays which occur during the course of a semester, the University reserves the right to close certain halls and to require students remaining on the campus to move to another hall for the duration of the holiday period.

Student Responsibility for Damages. The University holds resident students responsible for any damages other than normal wear that occur to their rooms and furnishings. Damages will be assessed by the University and the student will be billed for repairs or replacements. Students should inform University officials immediately upon occupancy of any conditions reflecting prior damages which have not been corrected.

Responsibility for Student Possessions. Although every precaution is taken to maintain adequate security, the University cannot assume the responsibility for the loss of or damage to student possessions resulting from any cause.

Refund of Residence Hall Fee. Except for the stated regulations governing the \$60 advance payment to reserve a room for the first semester, refunds, when authorized, will be made on a daily pro rata basis.

Extra Residence Hall Charges. Extra charges are made to students who occupy residence halls before or after the dates established for a semester or term.

Students who are required by the University to be on campus prior to and after the scheduled term or semester may upon the approval of the Vice-President for Student Affairs be exempted from paying the extra residence hall charges.

Reservation of Right to Change Fees and Regulations. The University reserves the right to make changes in its fees, charges, rules, and regulations.

RESIDENCE HALLS

West Campus. The University has available 3,606 spaces in eleven residence halls. Ten of these halls are air-conditioned. Only the newer "A" and "F" annexes are air-conditioned in Johnstone Hall. STUDENT FOOD SERVICE

The University Dining Halls provide several food service plans for the students:

(1) A 5-Day Board Plan (15 meals) Monday through Friday—holidays excluded. The fee for this plan is \$440 per year and may be paid in two installments—one-half at the beginning of the first semester and the remainder at the beginning of the second semester.

(2) A 7-Day Board Plan (21 meals) Monday through Sunday—holidays excluded. The fee for this plan is \$550 per year and may be paid in two installments—one-half at the beginning of the first semester and the remainder at the beginning of the second semester.

Both the 5-Day and 7-Day Board Plans will begin the first day of classes and end on the day which is scheduled for graduation. (These dates are listed in the University Calendar appearing in this catalog.) Individual meals may be obtained in the student dining halls prior to the day classes begin.

(3) Students who are not on a board plan may purchase tickets for individual meals at prevailing prices. Except on special occasions, a-la-carte service will not be offered in the Student Dining Halls.

All students who enter the University for the first time from high school or preparatory school and who live in University residence

halls are required to subscribe to either the 5-Day or the 7-Day Board Plan. Either the 5-Day or the 7-Day Board Plan is also recommended to upperclassmen who reside in University residence halls.

Upperclassmen and graduate students have the option at the time of their enrollment of electing either the 5-Day or the 7-Day Board Plan provided they agree to pay the board-plan fee for the period of their enrollment during the academic year.

A student having selected the 5-Day or the 7-Day Board Plan for the academic year may not withdraw as long as he remains enrolled, except in the case of marriage or circumstances which are determined by the University to be beyond his control.

LAUNDRY-DRY CLEANING

A plant with modern equipment is conveniently located on campus to service the laundry and dry-cleaning requirements of the student. Reasonable prices are charged for individual items on a cash-and-carry basis.

The University will not be liable for lost or damaged items unless reported within two days after the delivery date, and then for not more than the actual depreciated value of such articles as have been lost or damaged.

Coin-operated washing machines and dryers are available in the laundry building and several of the dormitories.

A commercially operated student linen-rental service is also available. Information regarding this service will be forwarded to all students who are accepted for enrollment in the University.

MEDICAL EXAMINATIONS

Completion of a medical history and physical examination record is required of all new students entering Clemson University for the first time. This examination must be completed by the student and the student's own physician or the health service of the school from which he graduates or transfers. This examination must be reported on a special form provided for this purpose by the University and mailed directly to the Director of Student Health Service. This should be received at least four weeks prior to matriculation to give time for processing; otherwise registration may be delayed. Incomplete forms will be returned.

The University requires that all new students have a current tetanus toxoid series or booster (within five years), a smallpox vaccination (within four years) and also immunization against polio-

myelitis. The oral (Sabin) type vaccine is preferred. All new students are also required to have a skin test for tuberculosis within one year prior to admission. If this test is positive, a chest X ray is also required. All positive reactors will then be required to have an annual chest X ray. These follow-up X rays after admission will be done at the Student Health Service.

STUDENT HEALTH SERVICE

Student Health Service: Cost per Semester \$25. Payment of the Student Health Service fee is required of all students living in University residence halls and all full-time students even though they do not reside in University housing. The Student Health Service maintains a new building with a complete outpatient department and a 34-bed hospital. The staff consists of three full-time physicians, including the director, a psychiatrist, ten full-time registered nurses and a full-time registered laboratory technician and a full-time registered X-ray technician. In addition, a sufficient number of nurses' aides, secretarial workers, orderlies and maids for 24-hour-a-day operations are employed. The best of modern equipment is available for student use.

The Student Health Service at Clemson University has several important functions. All of these are aimed at keeping the student in good health so that he may effectively pursue his school work. There is, of course, the basic function of medical care for the ill and injured. This is a vital part of its work. In addition to this, the Student Health Service attempts to put strong emphasis on health rather than illness. This begins with the entrance medical form. In laying out this form an attempt is made to get information, examinations and preventive medical procedures carried out to better equip the staff in protecting the student from illness and to serve as a guide for the care of pre-existing medical problems.

As the student progresses through his academic experiences, other procedures may be required or highly recommended. These are primarily an effort to teach the individual self-responsibility for maintenance of his own health and locate possible hidden diseases. The Health Service also has the position as the source of medical information as well as responsibility for indicated medical action: diagnostic, therapeutic and preventive.

The medical fee paid by each student covers the services of the University physicians and health service staff for most illnesses and injuries occurring on the campus. There are certain things, however, that it does not include, such as fees for routine physical

examinations for employment or transfer to another school and fees for outside physicians when called in for consultation, medical or surgical services performed away from the University or for accidents occurring off the campus. The fee also covers medication for acute illness but not for chronic illness lasting over two weeks or for pre-existing illness. Although ambulance transportation to a general hospital for serious illness or injury occurring on campus will, of course, be arranged, the expense for this service is the responsibility of the student. Transportation for less urgent ailments and routine visits can be arranged through the Health Service at the expense of the student.

The right of the Director of the Student Health Service, with the approval of the proper University authority, to obtain any of these extra services in behalf of any student under his care is hereby expressly reserved.

The Student Government, with full approval of the administration, offers a plan of accident and sickness insurance to full-time students. Each year, prior to the beginning of the fall semester, complete information on this insurance plan will be sent to students. This insurance is inexpensive and is designed to cover major medical expense not covered by the Health Service. It is highly recommended.

UNDERGRADUATE FINANCIAL AID

General. The Office of Student Financial Aid, operating in conjunction with the University Honors and Awards Committee, is responsible for coordinating all types of financial assistance administered by the University except those honors and awards which are presented for special achievement and extracurricular grants-in-aid. Currently available financial aids consist of scholarships, student loans, and part-time employment. It must be realized that any program of financial assistance can only be supplementary and that the basic financial responsibility remains that of the applicant and his parents.

Application Procedure. Beginning in January of each year all eligible students may apply to the Student Financial Aid Office for any type of financial assistance desired for the coming school year. Prompt consideration may be afforded only those applications submitted directly to that office rather than to the individual colleges, schools, and departments. All requests—except for part-time employment—must be supported by a Parents' Confidential Statement filed directly and renewed annually with the College Scholar-

ship Service, Box 176, Princeton, New Jersey 08540. Action on requests for aid will be based upon scholastic and activity records, eligibility to attend Clemson, and financial resources. Prospective students must have received their final acceptance for enrollment from the Admissions Office before complete action may be taken upon their requests for aid. Applicants will be notified when they are selected for specific types of assistance and should promptly indicate their acceptance. The Office of Student Financial Aid reserves the right to consider only those aid applications filed with that office, prior to cutoff date(s), and supported by requisite financial information (from College Scholarship Service). Further information and application forms may be secured by contacting the Student Financial Aid Office, Tillman Hall, Clemson University, Clemson, South Carolina 29631. Full-time students may borrow up to \$1,500 per year. Payment of interest and principal normally begins the tenth month after graduation and may be anticipated. The financial aid officer recommends the loan, after consultation with the student, and the loan is negotiated at the student's home town bank on the student's own signature. This is the designated lending agency of the State of South Carolina. Under the provisions of the Higher Education Act

of 1965, and depending upon family income, the U. S. Commissioner of Education may pay the interest on eligible loans while the student is in school.

STUDENT PART-TIME EMPLOYMENT

Clemson University employs students in those positions where part-time services may be utilized to mutual employment advantage. Students in actual need of financial aid are usually given preference in filling positions, all other qualifications being equal. Part-time employment of first-year students is not encouraged as the University has found through long experience that the period of academic adjustment during the freshman year allows little time for such extracurricular activity. The Student Financial Aid Office maintains application files of students desiring part-time employment for the information of requesting academic departments and off-campus agencies and industries interested in securing such help. Applications must be filed after registration for each semester during which part-time work is desired. Clemson does not participate in the Federal College Work Study Program.

OTHER SOURCES OF FINANCIAL AID

The following types of assistance are not administered by Clemson University. Recipients will be required to furnish the supporting agencies with a schedule of payments due the Bursar if payment is desired to be made through the University. Such funds must be received by him on or before the due dates. Any other arrangements require approval of the Bursar.

National and State Agencies. Students should investigate such sources of financial aid as the following: Veterans Education, War Orphans Education, advanced ROTC programs, National Guard and Reserve training programs, National Merit Scholarships, American Legion free tuition for deceased or totally disabled veterans' children, and grants made to the handicapped through the State Department of Vocational Rehabilitation.

Other Agencies. Help is often received from grants or loans through Beta, FFA, and 4-H Club membership; local organizations of the Daughters of the American Revolution, United Daughters of the Confederacy, Civitan, Elks, Masonic, Rotary and similar groups; James F. Byrnes Foundation, Pickett and Hatcher Educational Fund, Methodist Student Loan Foundation, Knights Templar Educational Foundation, The Agricultural Society of South Carolina, The Gar-

den Club of South Carolina, South Carolina Agricultural Teachers Association, Institute of Food Technologists, South Carolina Nurserymen's Association; Wallace Hatchery, Inc., and various other religious, civic, welfare, and educational agencies.

Industry and Related Foundation Support. Students are often able to finance part of their education by summer employment or by alternating semesters between the University and jobs with establishments near their homes. Some students are eligible for loans or grants which are administered by those corporate and local industries which employ their parents. The finest source of information regarding this type of support has been found to be high school counselors.

Miscellaneous. There are available a number of "deferred tuition" lending plans. Examples of these are Education Funds, Inc., Tuition Plan and College Aid Plan.

It should be realized that the University has no affiliation or contractual agreement with any of the agencies sponsoring such plans and can accept no responsibility for the outcome of any individual arrangements entered into with those agencies.

The Army Student Nurse Program may provide financial assistance from the U. S. Army for the last 24 months of the baccalaureate program. The allotment provides for basic pay, lodging, food allowance, tuition, books, and incidental fees, free medical and dental care and other privileges. Applicants must be in good standing. GUIDANCE SERVICES

Guidance has an important role at all levels of education and particularly so during times of transition and articulation. To

assist students in this period of emotional and academic adjustment, an orientation and counseling program has been established.

At the beginning of his university career, each student is assigned to a faculty adviser selected from his academic school. The faculty advisers provide information on courses of study, approve class schedules, interpret academic regulations, and suggest adjustments in making satisfactory progress toward graduation.

The residence hall program is organized to cope with personal problems and questions regarding procedures and policies of college life. Residence hall counselors and supervisors are primarily concerned with maintaining an environment compatible to serious study and with the educational potential of group living.

COUNSELING SERVICES

Counseling Services are located in Tillman Hall. These services are available free of charge to all registered students and spouses of registered students. These services are oriented to early identification of and assistance with academic, vocational, personal, and psychological problems. Testing facilities of a vocational and psychological nature are available. Students are encouraged to take advantage of the individual services of a Counseling Psychologist, a Counselor, and of the Psychometric Services.

The service is dedicated to helping students in self-understanding, self-improvement, and in the attaining of academic and vocational goals. The aims of the service are preventive rather than curative.

PLACEMENT SERVICES

The University is glad to assist all who ask for help in securing summer or permanent employment; it does not assure positions for those who complete any of the courses of study.

The Placement Office coordinates and plans campus interview visits requested by representatives seeking graduates for positions with business, industry, and public service. It maintains current files of reported job opportunities and of alumni who wish to learn of available openings.

A Placement Bulletin is prepared periodically for distribution on the campus and for mailing to alumni upon request. It announces scheduled campus interviews and lists specific openings which may be of interest to students and alumni.

BUILDINGS AND GROUNDS

Today, as throughout Clemson's history, the focal point of this picturesque campus is the Tillman Hall clock tower, the symbol of scientific education, research, and public service in South Carolina. Honoring the memory of colorful Governor "Pitchfork Ben" Tillman, this building houses administrative offices on the two lower levels and classrooms upstairs.

The Clemson campus consists of 600 acres and represents an investment of approximately \$60 million in academic buildings, student housing, service facilities, and equipment. Basically, this is the plantation that Thomas Green Clemson willed to South Carolina for the establishment of the University. Fort Hill, the former home of both Mr. Clemson and his father-in-law, John C. Calhoun, is preserved in the center of the campus as a national shrine.

Beyond the main campus, stretching into Oconee, Pickens, and Anderson Counties, are another 23,000 acres of farm and agricultural and engineering research lands. Located throughout the State are 6,800 more acres devoted to Agricultural Experiment Station research and 4-H Club work.

The university's \$60 million building program to meet the projected needs of a 10,000 student body by 1975 is over 25 per cent complete, with \$16 million in new construction enhancing the campus skyline.

The central feature of campus development, the Robert Muldrow Cooper Library, was completed in 1966. This beautiful structure houses approximately 400,000 volumes, and is the permanent home of papers and souvenirs belonging to the Honorable James F. Byrnes.

Other new facilities completed under the current building program are two high-rise residence halls which currently house 864 students, a 34-bed hospital and out-patient clinic, an additional cafeteria, an arts and sciences classroom building and 10-story faculty office tower, a graduate engineering research building, and the J. C. Littlejohn Coliseum which seats 10,500 people for basketball games and 12,000 people for speaking engagements, concerts, and other functions.

Teaching and laboratory facilities of the College of Agriculture and Biological Sciences are housed in the several buildings of the R. F. Poole Agricultural Center. Another grouping serves the College of Engineering. Among these are Olin Hall for Ceramic Engineering and Earle Hall for Chemical Engineering. These two build-

ings and the excellent equipment they house represent gifts from the Olin Foundation totaling nearly two million dollars.

Sirrine Hall is the home of the College of Industrial Management and Textile Science and within it are located government and industrial cotton fiber testing laboratories. The College of Architecture is located in a modern, well-equipped building and other groupings of classrooms and laboratories serve the College of Education, the College of Liberal Arts, the College of Physical and Mathematical Sciences, and the School of Nursing.

The 15 residence halls for men and women accommodate nearly 5,000 students. Individual units or apartments provide living accommodations for another 289 married students.

The university-owned Clemson House Hotel and 112 faculty and staff housing units provide excellent community hotel facilities and permanent housing.

RESERVE OFFICERS' TRAINING CORPS (ROTC)

The Department of the Army and the Department of the Air Force both maintain ROTC units at Clemson University. The mission of the Reserve Officers' Training Corps is to produce officers having qualities of leadership and attributes essential to their progress and continued development as commissioned officers in either the Army or the Air Force of the United States. A four-year program, consisting of the basic course for freshmen and sophomores and the advanced courses for juniors and seniors, is offered by both services.

To enroll in basic ROTC, students must be at least 14 years of age and citizens of the United States at the time of entrance. They must be of good moral character and must sign a loyalty certificate. They must not be physically disqualified to the extent that drill would further aggravate the physical defect. Air Force candidates will be administered a written Air Force Officer Qualification Test and a physical examination during their freshman or sophomore year to determine eligibility for the advanced AFROTC course, and interested Army candidates will be administered a written Army Officer Qualification Test and a physical examination during their sophomore year to determine eligibility for advanced Army ROTC. Foreign students may enroll in the ROTC program provided they sign a statement of intention to become American citizens or receive the approval of their government.

A maximum enrollment restriction is placed on entrance into the advanced ROTC program. Students enrolled in the advanced course are paid \$50 per month, including one summer vacation. Pay while attending summer camp is computed differently and is considerably higher. Members of the advanced course are required to attend one summer camp before commissioning.

Students who have six months or more active military service and students who have successfully completed two or more years of ROTC training at the high school level may substitute such service and preparatory schooling for all or part of the Clemson basic ROTC course. Students in either of these categories should consult with the Head of the Military Science or Aerospace Studies Department concerning accreditation.

Students who complete the prescribed ROTC courses and receive a bachelor's degree may be awarded commissions in either Regular or Reserve components of the Army or Air Force. Students who complete the basic course may receive 4 semester credit hours of elective credit; those selected for Advanced ROTC may substitute Aerospace Studies or Military Science courses for an additional 6 semester hours' credit.

Uniforms are provided to ROTC students. The University requires a deposit of \$25 from each basic student. This is refundable when the uniform is turned in, provided there is no damage to the uniform other than normal wear. Each advanced ROTC student is credited with a uniform allowance, paid by the Government to the University, which is used by the University to purchase officer-type uniforms for use during the junior and senior years. The uniform becomes the property of the student when he is commissioned.

AIR FORCE ROTC

The Air Force ROTC program provides for selected students an education vital to the career of a professional Air Force officer. Commissions in the United States Air Force are awarded to male students who qualify for enrollment and successfully complete the program.

The four-year program consists of the General Military Course (GMC) or basic course and the Professional Officer Course (POC) or advanced course. Both are general courses covering the organization and mission of the Air Force. A leadership development laboratory, known as Corps Training, is a part of both courses. The GMC consists of 2 years with 30 hours of classroom instruc-

tion and 30 hours of Corps Training each year. During the second year of the GMC, a cadet may apply for admission into the POC. This consists of 90 classroom hours and 30 hours of Corps Training each year.

Cadets enrolled in the POC under the four-year program attend a four-week training period at an Air Force base between their junior and senior years. This provides exposure to an Air Force environment which is beneficial in preparing cadets for future management positions.

The two-year program consists of a six-week preparatory training period, at an Air Force base during the summer between the student's sophomore and junior years, and the POC. The six-week preparatory period eliminates the requirement for completion of the GMC and training at an Air Force base while enrolled in the POC. Applicants for the two-year program must meet all eligibility requirements for POC enrollment. Entry into this program is highly competitive.

If accepted into the POC the cadet is placed under contract and, after satisfactory course completion and graduation, may be commissioned as a Second Lieutenant in either the Regular or Reserve components of the United States Air Force. To be eligible for enrollment in the POC a cadet must: (1) Make application. (2) Pass the Air Force Officer's Qualification Test. (3) Pass the Air Force physical examination. (4) Meet citizenship, age, and loyalty requirements. (5) Possess leadership ability and good moral character. (6) Successfully complete two academic years of the GMC or have received credit for its equivalent. (7) Enlist in the Air Force Reserve (Obligated Reserve Section) AFROTC. (8) Have two academic years remaining (including graduate study) at Clemson University at the time of entrance. (9) Be enrolled as a full-time student. (10) Have attained the academic standards required by the University and the Air Force. (11) Be selected by a board of Air Force officers.

POC cadets who intend to become Air Force pilots participate in the Flight Instruction Program (FIP) during their senior year. They receive, at Government expense, pilot training conducted by a civilian contract flying school. Students who are not qualified or do not desire pilot training may be considered for entry into the POC as candidates for navigator training or officer duty in non-flying categories.

AFROTC students who have demonstrated outstanding leadership and academic qualities may be designated distinguished cadets at the beginning of their senior year. Clemson's distinguished cadets are eligible to compete with distinguished cadets from other institutions for regular Air Force commissions which are awarded upon graduation from the University.

AFROTC provides scholarships to highly qualified AFROTC cadets each year. Each scholarship pays tuition, fees, and \$75 per academic year for books, in addition to \$50 per month to the recipient.

The Air Force offers outstanding opportunities for an AFROTC graduate to pursue studies leading to an advanced degree. The educational delay program allows an AFROTC graduate to have his call to active duty delayed until he receives his advanced degree.

The Air Force Institute of Technology (AFIT) offers graduate programs in scientific, technical, and other professional fields. These programs are conducted at the AFIT resident school, Wright Patterson AFB, Ohio, at selected civilian institutions, and through training-with-industries programs. AFROTC graduates are eligible to apply for AFIT schooling after they are called to active duty. Air Force officers receive full pay and allowances while attending school under the AFIT program.

ARMY ROTC

The Army ROTC instruction stresses an academic college-level program in content, scope, and intensity. Emphasis is placed on the development of the student's leadership, bearing, discipline, judgment and sportsmanship which will be a distinct asset in any profession that he may choose, military or civilian.

The General Military Science Program is conducted at Clemson (see Part V of this catalog for a description of courses). The program consists of a Basic Course for freshmen and sophomores and the Advanced Program for juniors and seniors. A student who has successfully completed the basic course, who meets the physical requirements, who has earned sufficient academic credits to be designated as an academic junior, and who is recommended by his instructors, may enter the Advanced Course offered during the junior and senior years. Successful completion of the Advanced Program qualifies the student for a regular or reserve commission in any of the arms or services of the United States Army.

Scholarship Program. Scholarships are available to selected ROTC students who are strongly motivated toward a career in the Army. Each scholarship pays for tuition, books and laboratory expenses, and, in addition, pays \$50 a month for the duration of the award, except during the Advanced Course summer training camp at the end of the junior year when the pay is at the rate of \$151.95 per month. Only students who participate in the four-year camp at the end of the junior year when the pay is one-half the rate of a Second Lieutenant's base pay with two or less years' service. Only students who participate in the four-year program are eligible. For further information concerning the scholarship program, contact the Office of the Professor of Military Science.

The requirements for formal enrollment in the Advanced ROTC Program are as follows:

Junior Year. Must have successfully completed all previous Military Science courses, have acquired a passing grade on a general intelligence test which is administered during the sophomore year, be physically qualified, and must have acquired the credits, a grade-point ratio of 2.0 and be designated an academic junior. The number of credits required for participation in the Advanced Course complements the academic requirements of the University and insures that the cadet receives his commission and his diploma simultaneously.

Senior Year. Must have successfully completed all previous Military Science courses and have attended summer camp, must be an academic senior, and have the cumulative grade-point ratio required for graduation.

Exceptions, where warranted, to the above general rules may be made by the Head of the Military Science Department.

During the four years of general military instruction, students will have the opportunity to indicate their preference for assignment to a particular branch. Final assignment authority remains with the Department of the Army and will be dependent upon such factors as the student's major academic course, class standing, qualities of leadership, the requirements and existing vacancies in the various branches of the Army, in addition to the student's choice.

Outstanding Army ROTC cadets who attain grades in the upper half of the class in academic subjects and the upper third in Military Science subjects during their junior year and who possess outstanding qualities of leadership, character and aptitude for military service may, with the approval of the University President, be desig-

nated as Distinguished Military Students by the Head of the Military Science Department. Those who maintain this outstanding record during their senior year may be designated Distinguished Military Graduates. A Distinguished Military Student may apply for appointment as a Second Lieutenant in the Regular Army.

Flight Training Program. An Army ROTC student in his fourth year of Military Science, or having completed his fourth year of Military Science, but not completed his academic requirements for graduation, may enroll in the Army ROTC Flight Training Program. If accepted, the student will receive 35 hours of ground school and 36½ hours of flight training at Government expense, after which the student may qualify for his FAA license and be recommended for further flight training upon entry on active duty. To be accepted in the Flight Training Program the candidate must agree that if commissioned at time of graduation, he will volunteer for Army Aviation Flight Training and assignment, and to serve on active duty as a commissioned officer for not less than three consecutive years from the date of completion of the Army Aviation Flight Training Course, in addition to meeting other physical and mental requirements.

ROTC students receiving commissions in the Regular Army or Army Reserve have the opportunity to apply for graduate school. If accepted by the Army, applicant may be allowed to delay entry upon active duty to complete graduate study.

The student who receives his commission through Army ROTC is appointed in the Army Reserve as a Second Lieutenant and called to active duty for 2 years. Graduates of the program who enter active duty for 2 years will acquire a 6-year military obligation, only 3 of which would be in the Ready Reserve.

A recapitulation of Army service obligation is listed below:

	<i>Reserve Officers</i>	<i>Regular Army</i>	<i>Reserve Flight Training Officers</i>
Active Duty	2 years	3 years	4 years (Approx.)
Ready Reserve	3 years	2 years	1 year
Standby Reserve	1 year	1 year	1 year

ROTC Requirement. For those students who matriculate initially at Clemson after the spring semester 1970, ROTC will no longer be a requirement for graduation. In order to resolve the requirements and status of students matriculating prior to the end of the spring semester 1970, the following requirements apply:

To be eligible for graduation all male students not otherwise exempted whose initial matriculation in Clemson University was:

- (1) On or before August 29, 1968, must complete four semesters of ROTC courses.
- (2) After August 29, 1968, but prior to January 17, 1969, must complete three semesters of ROTC courses.
- (3) After January 16, 1969, but prior to January 5, 1970, must complete two semesters of ROTC courses.
- (4) After January 4, 1970, but prior to May 9, 1970, must complete one semester of an ROTC course.
- (5) After May 9, 1970, ROTC courses are not a requirement for graduation.

HISTORICAL STATEMENT

In 1889 the General Assembly of South Carolina accepted the bequest of Thomas G. Clemson, which set aside the bulk of the Clemson estate for the founding of a scientific and technical college. The institution was also established under the Morrill Land-Grant Act passed by the National Congress in 1862. Clemson University, therefore, is a member of the national system of Land-Grant Colleges and Universities.

In 1964, in recognition of the expanded offerings of the institution not only in the areas of agricultural and mechanical arts but also in the sciences and arts, the name of the institution was changed to Clemson University. This change by the Legislature, effective July 1, 1964, followed an earlier recommendation to that body by the Board of Trustees.

The nature of the institution is outlined in Mr. Clemson's will and its acceptance by the legislature.

The will in part reads:

Feeling a great sympathy for the farmers of this State, and the difficulties with which they have to contend in their efforts to establish the business of agriculture upon a proper basis, and believing that there can be no permanent improvement in agriculture without a knowledge of those sciences which pertain particularly thereto, I have determined to devote the bulk of my property to the establishment of an Agricultural College upon the Fort Hill Place. My purpose is to establish an Agricultural College which will afford useful information to the farmers and mechanics; therefore it should afford thorough instruction in agriculture and the natural sciences connected therewith; it should combine, if practicable, physical with intellectual education; and should be a high seminary of learning in which the graduate of the common schools can commence, pursue and finish a course of studies terminating in thorough theoretic and practical instruction in those sciences and arts which bear directly

upon agriculture . . . but to always bear in mind that the benefits herein sought to be bestowed are intended to benefit agriculture and mechanical industries. . . . I trust I do not exaggerate the importance of such an institution for developing the material resources of the State, by affording its youth the advantages of scientific culture.

The desire to establish such a school or college, as I have provided for in my said last will and testament, has existed with me for many years past, and many years ago I determined to devote the bulk of my property to the establishment of an Agricultural School or College. To accomplish this purpose is now the one great desire of my life.

This will gave all that part of the Fort Hill Estate inherited by Mrs. Clemson from her mother and the bulk of Mr. Clemson's other real and personal property. The latter amounted to a sum, which, considering the purchasing power at the time, probably has been only a few times exceeded in a public benefaction in South Carolina.

A Board of Trustees of seven members was provided for: R. W. Simpson, D. K. Norris, M. L. Donaldson, R. E. Bowen, B. R. Tillman, J. E. Wannamaker, and J. E. Bradley, who with those chosen by the General Assembly, should constitute a governing board in the event the State accepted the bequest; but, who, in the event the State declined the bequest, should alone constitute a governing board for a private institution.

These seven trustees, along with other friends of the movement and the agricultural groups in the State, developed and organized a public opinion favorable to the plan.

In November, 1889, the General Assembly of South Carolina accepted the terms of the will and, following the decision of the United States Supreme Court to uphold the will, the State of South Carolina and the full Board of Trustees proceeded to convert the dream of Thomas G. Clemson into the reality of Clemson College.

The College was formally opened in July, 1893, with an enrollment of 446 students. The first graduating exercises were held in December, 1896, with a graduating class numbering 37—15 in the agricultural courses and 22 in the engineering courses.

LOCATION

The University is located on the Fort Hill homestead of John C. Calhoun, in the foothills of the Blue Ridge Mountains. It has an elevation of 800 feet above sea level and commands an excellent view of the mountains to the north and west, some of which attain an altitude of over 5,000 feet.

The University is located at Clemson, S. C., on the main line of the Southern Railway, U. S. Highways numbers 76 and 123 pass through Clemson, and daily bus service at regular intervals is available.

ALUMNI RELATIONS

The office of alumni relations coordinates all functions and services of the alumni office. The director of alumni relations is secretary of the Clemson Alumni Association and the Clemson Foundation through election by the governing boards of these two organizations.

Accurate records of addresses and information concerning alumni are being compiled by this office which also publishes a magazine and newsletter for distribution to the alumni.

The purpose of the Alumni Association is to serve the University and its alumni in every possible way. The Association holds its regular annual meeting at the University each June. Active membership is made up of former Clemson students who participate in the Clemson Alumni Loyalty Fund for the purpose of providing supplementary financial aid to the educational programs of the University.

The Clemson University Foundation was founded by interested members of the Alumni Association to raise an endowment to be used for the benefit of the University, its students, faculty and alumni. Trustees of the Foundation are elected by the Association.

THE J. E. SIRRINE TEXTILE FOUNDATION

Funds in this foundation were contributed by the members of the textile industry in South Carolina and amount to about one million dollars. Income from this fund is administered by the trustees of the J. E. Sirrine Textile Foundation. They have used the income to benefit textile teaching and research at Clemson University. Under the present system it is used to (1) supplement university travel funds for faculty members, (2) sponsor the school library by paying the salary of the librarian and paying for periodicals and books, (3) provide supplement to the salaries for two major professors, (4) provide four graduate fellowships annually, one of which may be held by a faculty member, (5) sponsor at Clemson annual seminar for South Carolina high school counselors, (6) and support special research projects.

STUDENT LIFE AND ACTIVITIES

PART III

PART III—Student Life and Activities

STUDENT BODY

The students of Clemson University believe that student government is necessary and beneficial and that every student should be represented in this government. All registered undergraduate and graduate students are upon payment of the Student Activities Fee members of the Student Body of Clemson University which in turn is represented by the student government.

Student government is actively sponsored and highly effective at Clemson. The three branches of government are patterned after our federal system; however, there are no political parties within the framework of this student organization. March and April are election months for student-body and class officers except for the freshman class which holds class-officer and Student Senate elections in September. Students interested in self-government are encouraged to participate in this active student organization.

WOMEN'S STUDENT ASSOCIATION

The purpose of the Women's Student Association is to plan and to coordinate activities for women students at Clemson University. W.S.A. also coordinates the activities of the various women's dormitories.

STUDENT PUBLICATIONS

The *Chronicle* is a student variety magazine published four times a year.

The *Taps* is the yearbook published by the students of the University.

The *Tiger* is a weekly paper published by the students of the University.

THE STUDENT CENTER

The student center, located in Johnstone Hall, has a student lounge with space for reading and games and two television sets. On the third floor there are meeting rooms and the student chapel. Also in this area are the offices of student publications, such as *The Tiger*, student newspaper; the *Taps*, annual publication; and Radio Station WSBF. The visitors' lounge and the information center are on the first floor off the loggia. The bookstore, post office, and canteen are located on the levels below the loggia.

CULTURAL, MUSICAL, THEATRICAL ACTIVITIES

University Concert Series

Each year since 1940 Clemson University has sponsored a concert series. All Clemson students paying full-time student activities fees are admitted to these concerts without charge. Others, including faculty members, may purchase tickets at a moderate cost.

The Program of Concerts for 1970-71 is:

Melbourne Symphony Orchestra—Willem van Otterloo
conducting

Coldstream Guards and Black Watch—a British Military
Spectacular

Ciro and his Ballet Flamenco

Leonard Pennario, pianist

The Johann Strauss Ensemble of the Vienna Symphony
Orchestra

The Dorian Woodwind Quintet and Morton Subotnick's
"Misfortunes of the Immortals"

Architectural Foundation Lectures and Exhibits

The College of Architecture at Clemson is able to present annually an outstanding series of lectures, which are open to all Clemson students, through financial grants from the Clemson Architectural Foundation. The Foundation also presents an annual schedule of at least 12 art exhibits in the Architectural College gallery, which is open to the public weekdays between 9 a. m. and 4:30 p. m.

University Bands

Tiger Band. The Tiger Band and Color Guard, composed of approximately 100 members, participate in football games, pep rallies, functions, and parades throughout the South. This band has appeared in major stadiums in many states, including the Gator, Orange, Sugar, and Bluebonnet Bowls and has performed on national television. The Tiger Band makes several out-of-town trips during the fall season. A smaller "pep band" from its ranks performs at all home basketball games.

Concert Band. The Clemson Concert Band is composed of the better musicians on campus. It is formed at the end of the football season, and gives concerts both on and off the campus, including a tour in the spring. This organization plays music of the great composers in addition to lighter fare.

Army and Air Force ROTC Bands. These bands participate in all major military functions, including ceremonial parades and reviews. (Admission is open to all qualified ROTC personnel.)

Glee Clubs. There are two choral organizations active on the campus for students interested in formal singing activities. The Clemson Glee Club consists of fifty members and is open to male students. For female students, there is a Women's Glee Club. Throughout the school year, these groups perform for many campus events, including full-length concerts. In the spring, a tour of South Carolina and nearby states is made. Audition is required for membership.

Clemson Players. This is the dramatic club of the University and is open to all students interested in dramatics. Four productions are presented annually.

THE YOUNG MEN'S CHRISTIAN ASSOCIATION

The Young Men's Christian Association at Clemson was organized in 1894, one year after the college was established, and has since then served both the University and the community to promote growth in Christian character through a well-balanced program of religious, social, recreational, and counseling activities. Because the YMCA is not specifically concerned with any particular denominational group, its program cuts across denominational lines and is interested in students of the University regardless of denominational affiliation or if they have no denominational affiliation.

Some of the activities which are promoted by the YMCA are the meditations in the student chapel, meditations on the halls where students live, residence hall forums, participation in religious emphasis programs throughout the year, and deputations to other colleges, universities, and high schools. The YMCA also coordinates the overall religious program of the local church groups.

The YMCA offers space and facilities for such activities as drop-ins, dances, television programs, music concerts, as well as physical activities, such as basketball, swimming, table tennis, billiards, and the social and recreational activities involved in the YMCA's program. A new feature of the YMCA's program is the development of a recreational area across the lake from the campus, comprising twenty-five acres with a nice beach, bathhouse, and a headquarters building for recreation.

The Young Men's Christian Association at the University is under the direction of an Advisory Board composed of members of the

faculty, administration, alumni, and members at large. There is a full-time staff of four men and one woman whose efforts are to give direction to the social, recreational, and religious life of students.

The student policy group is the YMCA Cabinet, which meets weekly to evaluate and promote the activities which appeal to students.

RELIGIOUS LIFE

Religious life at Clemson University is coordinated by the University YMCA with the Director of the YMCA serving as coordinator.

The YMCA building provides a meeting place for denominational groups not having a church at Clemson as well as for many interdenominational groups. The Student Center, which is located in the dormitory, has a chapel which is used by all of the religious groups as scheduled.

The student religious organizations at Clemson offer the student the opportunity to grow spiritually and socially. These organizations are:

- Baptist Student Union
- Clemson Canterbury Association (Episcopal)
- Christian Science Organization
- Hillel-Brandeis (Jewish)
- Lutheran Student Association
- Newman Student Association (Catholic)
- Westminster Fellowship (Presbyterian)
- Clemson Wesley Foundation (Methodist)

REGIONAL CLUBS

The regional clubs of Clemson University are composed of international clubs, out-of-state clubs and clubs representing the various counties in the state. The regional clubs are made up of students who wish to unite with other students from their own home areas. These clubs include:

International Student Association
Kappa Delta Kappa (Dillon County)
Colleton County Club
Pi Kappa Rho (Pickens County)

ATHLETIC PROGRAM

The University encourages students' interests in sports through a program of intercollegiate athletics and intramural sports.

It is a member of the Atlantic Coast Conference and its athletic teams, The Tigers, regularly play teams of that conference and other colleges. Membership of the Atlantic Coast Conference includes—

in addition to Clemson University—Duke University, North Carolina State University, University of Maryland, University of North Carolina, University of South Carolina, University of Virginia, and Wake Forest University.

The intercollegiate athletic program includes football, basketball, baseball, track, tennis, golf, swimming, cross-country, and soccer. Each year over 200 teams are formed in softball, football, volleyball and basketball in the intramural program, with champions determined in each sport through a tournament.

Among the facilities for intramural and intercollegiate athletics at the University are tennis courts, baseball and track facilities, an indoor swimming pool, and a football stadium which will accommodate almost 50,000 people. The Littlejohn Coliseum, with a seating capacity of approximately 10,000 for basketball and up to 12,000 for other events, was completed in 1968. The Fike Fieldhouse is being renovated to accommodate intramural activities.

AUTOMOBILE PRIVILEGES AND PARKING REGULATIONS

All motor vehicles owned and operated on the campus by students, faculty, and staff members must be registered with the designated authorities. On registering, each student, faculty, or staff member will be offered a copy of the parking and traffic regulations and will be issued a decal which will indicate the areas in which the car may be parked.

Students are urged to familiarize themselves with all provisions of the Traffic Ordinance contained in *The Traffic Code of Clemson University*.

SCHOLASTIC REGULATIONS

PART IV

PART IV—Scholastic Regulations

SCHOLASTIC REGULATIONS

Academic Standards. Proper discharge of all duties is required at Clemson University, and a student's first duty is his scholastic work. All students should be thoroughly acquainted with and cognizant of these basic requirements.

The Credit System. The semester hour is the basis of all credits. Generally, one recitation hour or 3 laboratory or shop hours a week for a semester constitute a semester hour. Thus, in Engl 101, English Composition, 3 cr. (3,0), as you will find this subject listed in the Degrees and Curriculums, the student takes 3 semester hours. When he completes this course satisfactorily, he is granted 3 semester credit hours on his record. The notation "3 cr. (3,0)" means that the course carries 3 credits, has 3 clock hours of theory or recitation per week, and no laboratory hours. Ch 101, General Chemistry, 4 cr. (3,3), carries 4 semester hours, has 3 hours of theory, and a 3-hour laboratory period.

The amount of work required for each credit will vary with the student's capabilities. In general, it is anticipated that each semester hour credit will require 3 hours work per week for average students. Thus, a 1(1,0) course would have 1 hour of lecture per week and require 2 hours of outside preparation. A 1(0,3) course would require 3 hours of laboratory work and no time for outside preparation.

Semester Grades. The standing of a student in his work at the end of a semester is based upon daily class work, tests or other work, and the final examinations. Faculty members may excuse from the final examinations all students having the grade of A on the work of the course prior to the final examination, but for all other students written examinations are required in all subjects at the end of each semester, except in certain laboratory or practical courses in which final examinations are not deemed necessary by the department faculty.

Scholastic reports are mailed to parents four times each year, including a preliminary statement of progress near the middle of each semester, and a final report at the end of each semester.

The Grading System. The grading system is as follows:

A—*Excellent.* Indicates that the student is doing work of a very high character. The highest grade given.

B—*Good*. Indicates work that is definitely above average, though not of the highest quality.

C—*Fair*. Indicates work of average or medium character.

D—*Pass*. Indicates work below average and unsatisfactory. The lowest passing grade.

F—*Failed*. Indicates that a student knows so little of the subject that it must be repeated in order that credit may be received.

I—*Incomplete Work*. Indicates that a relatively small part of the semester's work remains undone. Grade I is not given a student who has made a grade F on his daily work. Students are allowed 30 days after the beginning of the next semester in which the student is enrolled to remove the incomplete grade unless (1) an extension of time is approved by the instructor concerned, or (2) within one year of residence after receiving such a grade, a student repeats the conditioned course satisfactorily at Clemson, in which case no credit hours taken shall be recorded for the grade of I. A student who elects to repeat an incomplete course is responsible for notifying the Office of Admissions and Registration of his election during the semester in which the course is taken. This regulation applies only to the first time that a course is repeated.

In order to make up incomplete work, the student must first obtain a permit card from the Office of Admissions and Registration. This card serves as the authority for the removal of the I and also as a form for reporting the final grade.

WP—*Withdrew Passing*. This grade indicates that the student withdrew from the course while doing satisfactory work. No credit hours taken are recorded for the grade of WP provided that the course is dropped prior to the last three weeks of classes in the semester. Only semester grades shall be given and recorded for courses dropped during the last three weeks.

WF—*Withdrew Failing*. Indicates that the student withdrew from the course while doing unsatisfactory work. The credit hours of a subject on which the grade of WF is received are counted as credits taken in computing the student's grade-point ratio.

Dropping Class Work. A subject dropped after the first four weeks of class work is recorded as "Withdrew Passing" or "Withdrew Failing" depending upon the student's grade in the course at the time the subject was dropped.

Upon the recommendation of the instructor and the dean concerned, a student's standing will be investigated and he may be

required to drop a subject because of neglect, or lack of application or preparation. No student will be dropped under this rule without approval of the President.

Removal of Failures. A student who has failed (made a grade F) in a subject cannot receive credit for that subject until it has been satisfactorily repeated hour for hour in class, except that in the case of correlated laboratory work, the number of hours to be taken shall be determined by the instructor. Where separate grades for class and laboratory work are given, that part of the subject shall be repeated in which the failure occurs.

Rescheduling Courses Failed. A student who wishes to reschedule a course he has failed must do so within his next year of residence, or, if the course is not offered during this year of residence, he must reschedule the course the first time it is offered thereafter during his attendance at Clemson.

Rescheduling Courses Passed. A student may repeat a course he has passed with a grade lower than B provided he does so within three semesters of residence after the completion of his original enrollment in the course.

Scheduling Remedial Mathematics. Any student who has passed a course in freshman mathematics is ineligible to enroll in Remedial Mathematics.

Withdrawal from the University. A student may withdraw from the University any time before the last three weeks of classes in the semester without having grades recorded. A student enrolled the last three weeks of classes shall have final semester grades recorded.

A student withdrawing from college after preliminary reports are due must be passing a minimum of 12 semester credit hours at the time of withdrawal to qualify for re-enrollment the following semester.

After the first withdrawal from college the student is eligible to continue his enrollment the following semester, provided he meets other applicable regulations. For each succeeding withdrawal, however, the student shall be ineligible to continue his enrollment the following semester unless there are extenuating circumstances approved by the Committee on Admissions.

Grade Points. Four grade points are assigned for each credit hour on which the student receives the grade of A, 3 grade points for each credit hour of grade B, 2 grade points for each credit hour of grade C, and 1 grade point for each credit hour of grade D. No grade points are assigned for grades F, I, WP, or WF.

Grade-Point Ratio. In calculating a student's grade-point ratio, the total number of grade points accumulated by the student is divided by the total number of credit hours taken by the student at Clemson during the semester, session, or other period for which the ratio is calculated.

Minimum Requirements for Continuing Enrollment. At the end of the academic year in May, all student records are inspected for quality. At that time in order to be able to continue his enrollment, a student who has taken a total of:

- (a) 24 to 59 credit hours at Clemson must have a cumulative grade-point ratio of 1.30 or above.
- (b) 60 to 89 credit hours at Clemson must have a cumulative grade-point ratio of 1.50 or above.
- (c) 90 or more credit hours at Clemson must have a cumulative grade-point ratio of 1.70 or above.

A student completing a regular session has the privilege of continuing his enrollment through the immediately following summer session at Clemson or in Clemson parallel programs in an effort to meet the above requirements.

A student who has taken fewer than 90 credit hours at Clemson and who fails to meet the required grade-point ratio, as indicated in the table above, may apply for readmission after a minimum of one semester has elapsed. A student who has taken 90 or more credit hours and fails to meet the required grade-point ratio is permanently ineligible for readmission. Any exceptions to these minimum requirements for continuing enrollment and readmission must be approved by the Admissions Committee of the University.

Advanced Placement by Examination. In addition to earning credit by the usual method involving classroom attendance, students may receive credit toward their degree by completing a course successfully by examination only. Freshmen interested in exempting some of the elementary courses in this manner should participate in the College Board Advanced Placement Examination program, and have the results of these tests sent to Clemson.

Credit by Examination. Credit may be earned by means of a special examination without the necessity of class attendance subject to the following requirements:

- (1) The applicant must present evidence which would indicate that he has received training or taken work which is approximately equivalent to that given in the course at Clemson for which an examination is requested and that an examination is warranted.

(2) The applicant must not have previously failed or audited the course at Clemson.

(3) The applicant must apply in writing for the examination and the request must be approved by the Instructor, Head of the Department in which the course is taught, Dean of the College or School in which the course is taught, and the Dean of Admissions and Registration.

(4) A grade of not less than C on the examination is necessary in order for the examinee to receive credit on the course. An examinee receiving credit under this provision receives credit for "hours taken," "hours earned," and grade points as well as the course grade.

(5) The time of the examination will be arranged by the student with the instructor concerned, but must be taken within one month after the date of final approval or it will be necessary for the student to initiate another request.

Work Taken at Another Institution. Clemson students may receive credit for work taken at another institution; however, approval of the work should be obtained by the student prior to scheduling the work. Information and forms relative to this approval may be obtained in the Office of Admissions and Registration. By obtaining advance approval the student is assured of receiving proper credit at Clemson provided he passes the work with a grade one letter grade higher than the lowest passing grade.

Classification. All new students are classified as freshmen unless they have attended another college prior to entrance. For those students who have completed college work elsewhere, classification will be based on semester hours accepted at Clemson rather than the amount of work presented.

To be classified as a sophomore, a student must have completed at least 30 semester hours.

To be classified as a junior, a student must have completed at least 60 semester hours.

To be classified as a senior, a student must have completed at least 95 semester hours.

Regular Advancement in Classification. All students are urged to meet the requirements for sophomore classification by the beginning of the second year, for junior classification by the beginning of the third year, and for senior classification by the beginning of the fourth year. Failure to meet these requirements can jeopardize a student's academic standing with the University as well as

jeopardize his deferment under the Selective Service even though he may be otherwise eligible for the deferment.

Course Prerequisites. Prerequisites for individual courses are enumerated under the course listings in the Description of Courses. In addition to these requirements, colleges, schools, and departments may also establish other standards as conditions for enrollment. In the College of Engineering a grade-point ratio of 1.80 or higher is required for registration in all Engineering courses numbered 300 or higher.

Credit Load. Except for an entering freshman, who is restricted to the curriculum requirements of his major course, the credit load for an undergraduate must be approved by his class adviser. The class adviser will approve a credit load deemed in the best interest of the student based on such factors as course requirements, grade-point ratio, participation in other activities, and expected date of graduation.

Since grades are an important factor in determining credit loads, the student should be guided by the following table in presenting his schedule to his class adviser for approval:

<i>Grade-Point Ratio (Semester or Cumulative, Whichever Is Higher)</i>	<i>Recommended Maximum Number of Semester Hours to Be Scheduled</i>
0.00 to 0.99	14 to 16
1.00 to 1.99	16 to 18
2.00 to 2.99	18 to 20
3.00 to 4.00	20 to 22

When any full-time student reduces his credit load below 12 hours, but is still carrying 9 or more, he may be suspended for at least the remainder of the semester upon recommendation of the Vice-President for Student Affairs and approval of the President. When a student reduces his credit load below 9 hours he shall be suspended for at least the remainder of the semester.

Auditing Policies. Qualified students may audit courses upon the written approval of the professor, head of the department and the dean of the college or school concerned, and registration with the Dean of Admissions and Registration. Auditors are under no obligation of regular attendance, preparation, recitation, or examination and receive no credit. Participation in classroom discussion and laboratory exercises by auditors is at the discretion of the instructor. A student who has previously audited a course is ineligible for credit by examination.

A full-time undergraduate student with approval may audit courses at no additional charge as long as the student's credit load, including the course audited, is approved by his class adviser.

A graduate student regularly enrolled for a minimum of six semester hours may with approval audit one additional course without charge.

Members of the University teaching staff and the professional staff in research and agricultural extension may with approval audit courses without charge. Other full-time University employees may audit without charge with the additional approval of the employee's immediate supervisor and the Comptroller.

Residence Requirement for Graduation. In order to qualify for an undergraduate degree, a student must spend at least the last year of residence at Clemson and complete at Clemson a minimum of 30 of the last 36 credits presented for the degree.

Honors Program. The Honors Program at Clemson University provides for the fuller development of our most able students. They meet in small classes with outstanding professors and explore the subject matter of a course in greater depth than other students are able to do. The identification and selection of Honor Students begins with their freshman year, and Honors courses are provided at all four levels of undergraduate instruction. To remain in the Honors Program a student must maintain a cumulative grade-point ratio of 3.00.

An Honors Council composed of faculty members from each College and School is responsible for planning and supervising the Honors Program. *The Honors Program: A Student Handbook* is available for those who are interested.

Honors and Awards Day. Each spring an Honors and Awards Day is held for students who qualify for the honor list and for special awards. A cumulative grade-point ratio of 3.00 to 3.49 is required for listing with honor, 3.50 to 3.79 for high honor, and 3.80 or above for inclusion with highest honor.

Honor Graduates. Students who graduate in the Honors Program will have this fact indicated on their diplomas. Other graduates who meet the required qualifications are designated as having graduated with honor. A grade-point ratio of 3.00 to 3.49 is required for graduation with honor, 3.50 to 3.79 for high honor, and 3.80 or above for graduation with highest honor.

Examination on F Received in Last Semester. A candidate for a degree who in the semester immediately prior to graduation fails

to graduate because of an F on one course taken in that semester may stand a special examination on the course provided:

(1) That the candidate can furnish evidence of having done satisfactory study for the examination.

(2) That the examination is not given until after the regular degree date.

(3) That the candidate has fulfilled, prior to the due date for candidates' grades, all other requirements for his degree except those which can be fulfilled by passing the examination.

(4) That the candidate by removing the F by examination will finish all requirements for his degree which will be awarded on the next regular date for award of degrees.

Make-ups of I's Received in Last Semester. A candidate for a degree who in the semester immediately prior to graduation receives one or more grades of I shall have an opportunity of removing the unsatisfactory grades provided the final grades are received in the Office of Admissions and Registration by the time grades for candidates for graduation are due.

A candidate who qualifies for graduation under this regulation will be awarded his degree on the regular date for the award of degrees.

Special Graduation Requirements. A cumulative grade-point ratio of 2.00 is required for graduation. Candidates for degrees are required to apply for their diplomas within two weeks following the opening of the final semester or the opening of the summer session prior to the date the degrees are to be awarded. These applications should be filled out in the Office of Admissions and Registration on the regular blanks provided.

All work for a degree must be completed, all financial settlements made, and all government property and library books returned by 5 p. m. on the Tuesday preceding graduation.

A student in line for graduation at the end of this semester who fails to graduate because of an F on one course taken this semester may stand a special examination under certain conditions on the course *after the regular degree date*. A senior who qualifies for graduation under this provision will be awarded his degree *on the next regular date* for the award of degrees. For further information see paragraph **Examination on F Received in Last Semester**.

A student in line for graduation at the end of a semester or summer term who meets all requirements for graduation except for a deficiency in his grade-point ratio resulting from a deficiency of

not more than six grade points shall have the privilege of making up his deficiency by standing special re-examinations under certain conditions.

The examinations shall be taken after the regular degree date and in courses totaling not more than 6 semester credit hours which were passed during the last year of residence, and only one such examination may be taken on an individual course. When such examinations are taken under the above provision, the credit hours of the course or courses will not be counted as additional credit hours taken. Only the grade points over and above the grade points previously earned in the course may count toward raising the grade-point ratio.

A student who qualifies for graduation under this provision will be awarded his degree on the next regular date for the award of degrees.

If all work toward a degree is not completed within five years after entrance, the student may be required to take additional courses.

COLLEGE OF AGRICULTURE AND BIOLOGICAL SCIENCES

The undergraduate curriculums offered by this College are presented under two classifications—*Agriculture* and *Biological Sciences*.

AGRICULTURE

Modern agriculture is the science, business, and art of producing, processing, and distributing plant and animal products, including those aspects of economics and human relations connected with these activities. Agriculture is a unique area in education because it applies the basic sciences to biological material for economic implications.

Today's agriculture includes much more than farm production. About 6 million people provide supplies and services for farmers

* Jointly administered by the College of Agriculture and Biological Sciences and the College of Engineering.

and 10 million process and distribute farm products. These two segments together with farm production, which employs 5 million workers, provide jobs somewhere in agriculture for 21 million Americans—approximately one-third of all jobs.

Thousands of agricultural graduates are needed each year in this basic industry. Our land-grant colleges and universities are now graduating considerably less than the total number needed to fill the jobs available each year—jobs important to every person, jobs with futures, jobs with challenge, jobs with personal and financial rewards.

The total program in Agriculture at this institution includes Resident Instruction, Research (Agricultural Experiment Station), and Extension (Agricultural Extension Service). Organized under Resident Instruction are curriculums in Agricultural Economics, Agricultural Education,* Agricultural Engineering,† Animal Industries (majors in Animal Science, Dairy Science, and Poultry Science), Biology (major in Entomology), Food Science, Forestry, Plant Sciences (majors in Agronomy—Crops and Soils, Horticulture—Fruit and Vegetable, and Horticulture—Ornamental), and Pre-veterinary Medicine.

The curriculums in Agriculture are continuously revised to meet the changing needs of this dynamic industry. In this connection, students in many of the curriculums now have the opportunity to specialize by choosing a minor in *Science*, *Business*, *Production*, *International Agriculture*, or a *Second Department*.

Science Minor—This minor emphasizes the basic sciences that prepare students to contribute to the advancement of knowledge in their respective fields. It is designed for students whose anticipated work requires considerable scientific training, usually including graduate studies. Employment opportunities include research with State Agricultural Experiment Stations, the United States Department of Agriculture, and industrial and commercial organizations; and teaching in colleges of agriculture, and other educational work with Federal, State and industrial organizations.

Business Minor—This minor emphasizes principles and practices of business management as applied to businesses and industries associated with agriculture. It is designed for students who plan to work with one of the many businesses and industries that provide

* Jointly administered by the College of Education and the College of Agriculture and Biological Sciences.

† Jointly administered by the College of Agriculture and Biological Sciences and the College of Engineering.

supplies and services for the farmer, and process and distribute farm products. Employment opportunities include work related to meat and poultry processing, sales and service of farm machinery, manufacturing and sales of fertilizers and pesticides, dairy and food processing, grain and seed processing, feed manufacturing, banking and credit, insurance, farm management, land appraising, and the marketing of agricultural commodities.

Production Minor—This minor emphasizes the application of scientific principles to agricultural production. It is designed for students whose anticipated work requires broad general training in scientific and practical agriculture. Employment opportunities include general and specialized farming; agricultural extension services; teaching vocational agriculture; conservation of natural resources; agricultural communication; and agricultural services of the United States Department of Agriculture, State Departments of Agriculture and private enterprises.

International Agriculture Minor—This minor emphasizes the international aspects of agriculture and applies basic scientific principles and agricultural practices to worldwide agriculture. It is designed for students who contemplate work in international agricultural positions either in the United States or abroad. Employment opportunities include positions with the Foreign Agricultural Service of the United States Department of Agriculture, with foundations such as the Ford Foundation, with the Agency for International Development, with industries such as United Fruit Company, and with other domestic and foreign interests.

Second Department Minor—This minor emphasizes special training in an area of study other than the major. A *Second Department* minor may be selected either within or outside of the College of Agriculture and Biological Sciences. It is designed for students who wish additional specialized training outside their major area of study. Additional information relative to employment opportunities open to students with a minor in a *Second Department* is given elsewhere in this catalog under the various curriculum listings.

To illustrate further the types of work in which graduates engage, a few of the many occupations of agricultural graduates are listed under each curriculum.

AGRICULTURAL ENGINEERING*

The graduate in Agricultural Engineering, with broad training in mathematics, physics, chemistry, and the biological sciences as well as comprehensive coverage of the engineering sciences, is well equipped to apply engineering to many functions affecting the well-being of mankind. The Agricultural Engineer is sought by industry and public service organizations primarily for his ability to apply engineering know-how to agricultural production and processing, and to the conservation of land and water resources. Specific areas of interest include power and machinery, soil and

* The Agricultural Engineering curriculum is jointly administered by the College of Agriculture and Biological Sciences and the College of Engineering.

water resources engineering, electric power and processing, structures and environment, and food engineering.

The undergraduate Agricultural Engineering curriculum leads to the Bachelor of Science degree. Based upon fundamental training in the basic sciences, the curriculum includes such engineering sciences as mechanics, fluids, thermodynamics, electrical theory, computing devices and systems analyses. The basic agricultural sciences of soils, plants and animals are included so as to provide a foundation for Agricultural Engineering analysis and design. Recognition is also given to the necessity for being able to synthesize information from any of the applicable subject matter areas, including studies of energy conversion, engineering analysis and the engineering properties of biological materials, and with emphasis upon economy and integrity of design. Research is included in order to introduce the student to the scientific method. Courses in the humanities are required to provide the graduate engineer with a well-rounded educational experience.

The undergraduate curriculum is designed for both the student who wishes to terminate his formal academic training at the bachelor's level, and also to provide the necessary prerequisites for those who wish to continue in graduate study. Graduate programs in Agricultural Engineering which lead to both the Master of Science and the Doctor of Philosophy degrees are offered.

Since an Agricultural Engineering graduate has a broad training in engineering, in the sciences, in humanities, and in life sciences, he has the pick of opportunities in many areas. Opportunities in Agricultural Engineering include employment with industry as design engineers, research engineers, production engineers, and in sales and service; with state and federal agencies as teachers, research engineers, and extension engineers; as field engineers with the Soil Conservation Service, Bureau of Reclamation, and similar organizations; and with agricultural enterprises as managers, contractors, equipment retailers and as consulting engineers.

The Agricultural Engineering curriculum is accredited by the Engineers' Council for Professional Development.

DAIRY SCIENCE

The major in Dairy Science is designed to provide the student with an understanding of scientific principles and the application of these principles in the scientific, technical and business phases of the dairy industry. Completion of required studies in the sciences and humanities and selected courses by the student in areas of personal interest prepares the graduate for a successful chosen profession. A career in the dairy industry is a rewarding one, not only monetarily, but in rendering a service in providing a wholesome nutritious food for mankind.

Opportunities for dairy science graduates are many. They include the management of production and processing facilities, quality control work for processing units and production organizations, industrial promotion and public relations work in both production and processing fields, dairy and food products engineering, special services, public health service, teaching and research. Special service opportunities are available in state and national breed association work, breeding organizations, industrial supplies, production and processing equipment and supplies. Opportunities in educational activities include positions with industrial associations, state and federal services and federal programs with foreign assignments.

POULTRY SCIENCE

The Poultry Science major is expected to gain knowledge in the basic disciplines within which the poultry industry operates and specialized knowledge on the biology of the avian species. Technical poultry courses emphasize the nutrition, physiology, genetics and pathology of domesticated birds and the environmental requirements for incubation of eggs, production of meat and eggs and handling of products.

Minors in *Science*, *Business*, *Production*, *International Agriculture*, or a *Second Department* provide for the specialized interest of the student within the broad area encompassed by Poultry Science.

Job opportunities for Poultry Science majors who minor in *Science* include teaching, extension and research positions in colleges, government laboratories or in industry. This usually involves graduate work. *Business* minors are especially equipped to move into management positions in the small to large corporations in feed manufacturing, production, processing, and marketing of poultry products. *Production* minors are trained for operation of poultry farms, general farms, or as extension agents working with farmers. *International Agriculture* minors are expected to export the technical information and techniques so successful in the American poultry industry to a protein-short world. Many American poultry firms are operating on a worldwide basis and our own government and foreign nations are interested in assistance in transferring poultry knowledge to underdeveloped areas.

Students who hope to work in broad agricultural areas that include poultry and other agricultural segments may find a minor in a *Second Department* helpful. This includes such opportunities as agricultural chemicals, pharmaceuticals, biologicals, feed manufacturers, breeding organizations, marketing organizations, publishers, advertisers, and poultry farmers involved in another enterprise.

BIOLOGY (Entomology Major)

The Entomology major in the Biology curriculum is described below. See pages 144-148 for other majors in the Biology curriculum.

ENTOMOLOGY

Entomology is that branch of science that deals with the study of insects. In many ways insects are the most important group of animals that affect man. At the present time insects are costing the American public approximately four billion dollars annually. There will always be a need for qualified entomologists and the financial rewards to members of this profession are comparable to those enjoyed by most other scientists.

Depending on training, ability, and interest, entomologists find employment in such areas as the following: (1) research entomolo-

gist with several federal agencies, the state experiment stations, or private research foundations; (2) teaching entomology and/or zoology at the college or university level; (3) industrial research and the development of more efficient insecticides; (4) quarantine and regulatory work at both state and federal levels; (5) sales and management for agricultural chemical or the pest control industries; (6) the federal and state extension services; (7) many other specialized areas where a knowledge of insects is essential, such as beekeeping or disease transmission.

FOOD SCIENCE

The Food Science curriculum is designed to prepare students for the many career opportunities in technical and management areas of the food industry. The food industry, being the nation's largest industry, is becoming increasingly technical and requires large numbers of professional food scientists. World food supplies, particularly those rich in protein, are becoming increasingly critical in many parts of the globe. This situation is expected to accelerate the demand for food scientists.

Opportunities for graduates in Food Science include research positions in government organizations and state experiment stations, supervisory, administrative, research, and quality control positions in food processing industries, inspection and grading work with

state and federal agencies, consulting, and teaching and extension activities with universities and colleges. Students graduating in Food Science are well-prepared to pursue postgraduate training in areas such as microbiology, biochemistry, nutrition, as well as in Food Science.

The student majoring in Food Science will select a minor in *Science, Business, International Agriculture*, or a *Second Department* which will emphasize training in an area other than Food Science and which is designed to supplement the major course of study.

FORESTRY

The Clemson Forestry curriculum includes the fundamental and applied sciences needed in the scientific management of multiple-use forests. Foresters of professional standing are employed in various capacities by private concerns and by federal, state, and other public agencies. They may be engaged as managers and administrators of forest lands, technical specialists in extension, fire protection, recreation, or in other activities presupposing professional forestry knowledge. Foresters earning advanced degrees find employment in academic work and in research conducted both by public and private agencies.

PLANT SCIENCES

The Plant Sciences curriculum includes three majors—Agronomy—Crops and Soils, Horticulture (Fruit and Vegetable), and Horticulture (Ornamental).

AGRONOMY—CROPS AND SOILS

Agronomy encompasses the natural and physical sciences involved in the production of crops that are used to feed and clothe the world's population. Agronomy students may specialize in the sciences relating to field crops and soils. Trained agronomists may choose an occupation that ranges from the applied (farming) to the abstract (basic research). Agronomists may be employed by the Agricultural Extension Service, the Soil Conservation Service, and the Agricultural Research Service. In addition, agronomists may find employment in college and high school teaching in foreign service work, and in the many allied industries in agriculture.

Students majoring in Agronomy—Crops and Soils will declare a minor in *Science, Business, Production, International Agriculture*, or a *Second Department*.

HORTICULTURE (Fruit and Vegetable)

This major provides the student with a basic education in science and the humanities, and the application of both in the scientific, technical, and business phases of the fruit and vegetable industry.

Opportunities in this field of study include vegetable and fruit farm management; inspection of fresh fruit, vegetable and other food products as well as nursery stock. There are many other opportunities as in plant breeding, agricultural extension service work, horticultural research, horticultural teaching and writing, and fruit and vegetable processing. Other occupations include sales and field work with seedsmen and nurserymen, and manufacturers of food, fertilizer, and pesticide products.

Students majoring in the fruit and vegetable phase of Horticulture may choose a minor in *Science, Business, Production, International Agriculture*, or a *Second Department*.

PRE-VETERINARY MEDICINE

The curriculum in Pre-veterinary Medicine is designed to meet the general requirements for admission to certain schools of veterinary medicine. Since the requirements for entrance to these schools are not uniform, the student in planning his program should consider the specific requirements of the school he expects to attend. Under the Southern Regional Educational Plan, ten qualified students from South Carolina may enter the School of Veterinary Medicine at the University of Georgia each year. The courses listed below are minimum requirements for all students applying under the Regional Education Board Contract. Only the exceptional student can expect to complete the minimum requirements in four semesters. Students in the entering classes in Schools of Veterinary Medicine now average in excess of three years of Pre-veterinary training.

DIVISION OF BIOLOGY

The biological sciences are concerned with understanding the phenomenon of life, its origin and development, its morphology and classification, its mechanisms and regulations and its procreation and demise. Biology, without question, is relevant to the student in the 1970's, for it assists him in understanding not only himself but all forms of life that are around him.

Academic sections within the Division of Biology offer courses stressing the fundamental structure and unity of life as well as the interrelationships between all components of nature.

Thus, with the fundamentals well established, the developing biologist may choose to complete his undergraduate training in the majors of Botany, Entomology,†† Microbiology, and Zoology. The curriculum in any one of the four areas will introduce to the student the classical biology or morphology and classification as well as modern biology which seeks to understand the physiochemical bases of the phenomenon of life. Overspecialization will be avoided and instead the choice of subjects will attempt to provide the basic knowledge needed by each student in his chosen career.

Upon the completion of his undergraduate program, the student may choose to become employed in his area of interest or continue his education. If the latter is chosen he should be equipped to enter a professional school, such as a medical college, continue in a graduate biology curriculum; or a graduate program in one of the associated areas, such as bioengineering, biochemistry, biophysics, biomathematics, or one of the areas of agriculture, such as plant or animal breeding, plant pathology, entomology and plant or animal physiology.

BOTANY

Botany is that portion of Biology dealing with plants, their structure, classification, growth, and development. The Botany major is designed to prepare students for employment as biologists in sales, service, or research in industry or government service. It also provides the background in the fundamental physical and biological sciences necessary for graduate study in the basic and many of the applied plant sciences. Adequate electives are provided so that a student may take additional courses in the area or areas of his special interest.

MICROBIOLOGY

Microbiology is that discipline of biology concerned with the study of microscopic and sub-microscopic forms of life, which include the bacteria, viruses, yeasts, fungi, protozoa and unicellular algae. The microbiologist seeks to describe these minute life forms in terms of their structures, functions, and processes of reproduction, growth and death at both the cellular and molecular levels. He is also concerned with their interactions and interrelationships with both their animate and inanimate environments, and also with their economic importance to man. To accomplish these goals the microbiologist must be trained in the areas of mathematics, physics, chemistry, and biochemistry in addition to those of microbiology.

The microbiology major offers courses to cover all the areas mentioned above, so that a student graduating from this program is prepared either for entrance to graduate school in the fields of microbiology, biochemistry or bioengineering, or to pursue a career in one of the many industries or public service departments dependent upon microbiology, *e. g.*, the fermentation and drug industries, agriculture, various food industries, medical and public health microbiology.

ZOOLOGY

Zoology is that aspect of biology which attempts to describe, classify and explore all facets of animal life. The examination of this life would extend from the broad view of the ecologists to the ultra-structural view of the electron microscopists. Of equal importance will be the discussion of historical concepts which have shaped the study of zoology in the past and those of recent origin which characterize modern biology.

The major in Zoology therefore will provide thorough coverage of the fundamentals of zoology, drawing when necessary on the chemical, physical and mathematical as well as philosophical disciplines. The zoology program combines laboratory as well as field exercises in the treatment of vertebrate and invertebrate animals with elective hours available for developing further specific interest areas. On the completion of this major the student should be prepared to continue in graduate studies in several zoological disci-

plines, enter a medical or dental college, enter the business community in sales or service or serve with a federal or state agency.

COLLEGE OF ARCHITECTURE

The Clemson University College of Architecture provides coordinated pre-professional and professional degree programs at undergraduate and graduate levels in preparation for careers in: Architecture, City and Regional Planning and Building Construction. These curriculums are not offered elsewhere in the state. The pre-professional offerings of the College also provide an excellent basis for subsequent graduate studies in Landscape Architecture, Art and Architectural History, Painting and Sculpture.

In addition to the courses and curriculums structured for the professional students of the College, cultural offerings in both lecture and studio courses are available to the general student population and required in certain other schools and colleges.

A rich annual series of exhibitions in the Rudolph Lee Gallery of the College and lectures by figures of international importance in the environmental arts and sciences are presented by the Clemson Architectural Foundation and open to the public. An unusual bond has existed between the architects of the state and region and the College since the first offering of architectural courses to a few students in 1914. The South Carolina Chapter of the American Institute of Architects in 1955 asked that a strong school be established

and pledged its continuing unified support of school programs as the prime project of the organization. Sweeping administrative and curricular changes brought a five-year curriculum and full accreditation that year. Following three years of rapid development the College was made an autonomous professional school by action of the Board of Trustees in 1958.

During the decade just ending, the College has sought to select its students with increasing care and to broaden and strengthen its offerings and its faculty. As might be expected, the curriculums and objectives are under continuing study.

To better prepare professional students a two-degree six-year program is required for those majoring in architecture beginning with the entering class of the academic year 1967-68.

The College enjoys contracts for creative research in several areas, and receives an annual support budget from the Clemson Architectural Foundation to enrich its program. It is a member of the Association of Collegiate Schools of Architecture, the Associated Schools of Construction, collaborates with the South Carolina Chapter of the American Institute of Planners, and is accredited by the National Architectural Accrediting Board.

The Architectural Foundation is a nonprofit corporation established in January 1956 under the Laws of the State of South Carolina and under the sponsorship of the South Carolina Chapter of the American Institute of Architects. It was established to facilitate the continuous improvement of architectural education and of the art and technology of building in South Carolina by providing financial and other assistance to the College of Architecture at Clemson University. By this means students in the College of Architecture at Clemson have been able to enjoy instruction, facilities, and conditions equal to those normally found at the nation's best universities.

The advantages to the student evolving from the Clemson Architectural Foundation are many. Among them are the programs of celebrated guest critics and lecturers, excellent exhibits of many types—paintings, sculpture, architecture, construction, furniture, ceramics, textiles and other allied arts and crafts—traveling expenses for student field trips and professional activities, and student loans and grants. Visual-aid facilities and gifts to the library are examples of permanent assets provided through Foundation support.

Intangible but important is the sense of unity and of high purpose resulting from the activities of the Clemson Architectural Foundation which now permeates the entire architectural scene in South Carolina: the architects, their friends in the building industry and the faculty of the College.

The College of Architecture is housed in a modern building constructed for its program in 1958. Space nevertheless is limited and enrollment restricted to students with capacity and motivation. A major addition to the building is projected for early construction. At present the requisite functions are provided on two levels arranged around a central landscaped court. Design studios and the library occupy the entire second level. The first level accommodates the auditorium, classrooms, graduate studios, two art studios, the Exhibition Gallery, and administrative and faculty offices. A ground floor houses shops, photo laboratory, and sculpture studio, jury room and gallery preparations and storage. All areas are air-conditioned.

ENTRANCE REQUIREMENTS

In the interest of both students and the conservation of University resources and to maintain a program on the highest level, admission to the College of Architecture must necessarily be on a selective basis. Annual enrollment quotas are established consistent with space available. Selection considerations include secondary school record and performances in the College Board examination (SAT Test). A personal interview with the Dean should be arranged by the applicant as early as possible in the year before admission.

Applicants are required to take the Architectural Aptitude Examination as administered by the Educational Testing Service of Princeton, and although these are not used as criterion for admission, the results are helpful to both the applicant and the admission committee.

Applications for the Aptitude Examination may be obtained from the Educational Testing Service, Princeton, New Jersey 20933. This test is administered at Clemson and other regional testing centers in October, January, and March.

Students wishing admission are advised to make application to the University early in the fall or winter of their senior year in high school and to make arrangements for a personal interview with the Dean of the College as soon as possible. The admissions council of the College will further interview all entering students during freshman matriculation week of each academic year.

THE PROGRAMS OF STUDY

ARCHITECTURE

The architect as a practicing professional has the creative responsibility of designing the buildings which shape our physical environment. To understand the humanistic, economic and technological nature of environmental problems, he must have a sound general education. This professional education must prepare him for a life of continuing change, in which problems to be solved will be large and small, for every sort of function, in every type of climate and for every condition of budget.

The curriculum in architecture is six years in length embracing a four-year Bachelor of Arts in Pre-architecture sequence with a balance of general education and professional study followed by two intensive years of graduate work leading to the first professional degree, Master of Architecture.

BUILDING CONSTRUCTION

The nation's leading industry in terms of annual dollar volume is Building Construction. Building contracting is a dynamic field and although organizations vary considerably in type, size and complexity, those in leadership positions must invariably have capability (education) in management, construction science, relevant technical disciplines, and the humanities. The curriculum in Building Construction has been structured to provide young people with the unique balance of studies needed to equip them for key roles in the industry. There is a tremendous demand for graduates of the curriculum. The course is four years in length and leads to the Bachelor of Science degree in Building Construction.

CITY AND REGIONAL PLANNING

The City Planner is a member of an essential and complex profession concerned with the programming and guiding of urban and regional development. Our expanding society presents unusual opportunities for Planning graduates in private firms and on public agency staffs. When asked what made a good planner, a leading British professional replied, "A sensitive, creative leader who has lived a bit." He must be able to integrate recommendations of a wide range of specialists. The sociologist, economist, traffic engineer and ecologist, plays significant roles in urban growth and change, but the city planner and urban designer must bring the city to physical form with balance and imagination.

Students admitted as candidates for the Master of City and Regional Planning degree must have the following qualifications:

- (a) Meet the admissions requirements for the University Graduate School.
- (b) Have a baccalaureate degree approved by the school in such fields as: architecture, civil engineering, economics, landscape architecture, law, political science, or sociology.

Candidates entering the curriculum from a non-design discipline will be required to take a special parallel course designed for their needs, and accordingly may be excused from courses in which they have achieved proficiency.

COLLEGE OF EDUCATION

The College of Education provides professional programs designed to prepare undergraduate and graduate students for careers in the field of Education. These curriculums are organized to give students the opportunities to (1) acquire a broad general education through liberal arts and science courses; (2) develop depth of knowledge in the teaching area; (3) gain an understanding of the historical, philosophical and psychological backgrounds of American Education; and (4) acquire knowledge of and skill and experience in using effective teaching techniques.

Curriculums for those preparing to teach have been especially designed by a committee from each department offering a teaching major and the College of Education. The Clemson University Teacher Education Committee, composed of four representatives from the teaching-major departments and four public-school administrators, serves in a curriculum advisory capacity to the Dean of the College of Education.

The College of Education offers courses in Agricultural Education, Early Childhood Education, Elementary Education, Industrial Education, Recreation and Park Administration, and Secondary Education.

Programs leading to the Bachelor of Science degree are available in Agricultural Education, Industrial Education, Recreation and Park Administration, and Science Teaching (Biological Science, Chemistry, Physics, or Mathematics). Students preparing to teach in these fields should register as freshmen in the appropriate curriculum in the College of Education.

Students preparing to teach Economics, English, History, Mathematics, French, German, Spanish, Natural Sciences, Psychology, or Sociology should register in the Bachelor of Arts program in Secondary Education. Those preparing for the elementary level should register for the Bachelor of Arts program in Elementary Education or in Early Childhood Education.

Any student who has been admitted to the University and who is eligible for continuing enrollment may be admitted to the College of Education. However, admission to specific curriculum is selective and requires meeting established criteria. Students who transfer to the College of Education as upperclassmen will be required to meet all the basic requirements for admission to that Education curriculum.

Application to a specific curriculum should be made to the office of the Dean or to the department concerned during the semester preceding that in which the student wishes to obtain admission. Completion of Sc Ed Form 01 and a personal interview are required as part of the application to a specific teacher education curriculum. Sc Ed Form 02, Application for Directed Teaching, must be filed with the faculty adviser no later than the fifth week of the semester preceding the one in which student teaching is to be scheduled. Sc Ed Form 03, Observation and Participation Data, must be completed prior to registration for Directed Teaching.

BACHELOR OF ARTS CURRICULUMS

EARLY CHILDHOOD EDUCATION

The curriculum in Early Childhood Education leads to a Bachelor of Arts degree in Early Childhood Education. It prepares students for teaching positions in kindergarten or grades 1-3. A minimum of 134 semester hours is required for graduation.

Application to Directed Teaching (Ed 484) should be made in writing no later than the fifth week of the semester prior to the one in which student teaching is to be scheduled. A student whose cumulative grade-point ratio is lower than the requirement for graduation will not be permitted to register for this course.

SECONDARY EDUCATION

Programs leading to a Bachelor of Arts degree in Secondary Education are available to students preparing to teach Economics, English, History, Mathematics, French, German, Spanish, Natural Sciences, Political Science, Psychology, or Sociology on the high school level. The teaching field should be selected as early as possible in order that appropriate freshman and sophomore courses may be taken.

Each curriculum requires a major concentration in the teaching field. Specific courses and sequences have been designated by teacher education committees to meet requirements for those planning to teach. Students who have elective courses in the teaching

area should consult the departmental adviser prior to scheduling these courses.

The Professional Education courses must be completed in sequence prior to registering for the block schedule. Application to Directed Teaching (Ed 412) should be made in writing no later than the fifth week of the semester preceding the one in which student teaching is to be scheduled. A student whose cumulative grade-point ratio is lower than the requirement for graduation will not be permitted to register for Directed Teaching.

Education 412 is conducted on a full-day basis for one-half semester. Students taking Ed 412 will register for Ed 424, 458 and Mus 310, these three courses being taught on a six-day basis during the first half of the semester.

INDUSTRIAL EDUCATION

The curriculum in Industrial Education is designed to prepare students for careers in the teaching of industrial subjects and in training programs in industry. To accomplish these purposes the curriculum is divided into three areas of specialization leading to the degree of Bachelor of Science in Industrial Education. At the end of his freshman year, each student will select one of three options: Industrial Arts Education, Vocational-Technical Education, or Education for Industry. Each option requires 135 semester hours of course work.

The Industrial Arts Education option is for those students who desire to teach industrial arts in the secondary schools. Industrial arts is the subject area in the public school system which attempts to provide youth with an interpretation of American industry. It is a general education subject designed to give students exploratory experience in the classroom and laboratory. Majors in this option are qualified for full certification as secondary school teachers of industrial arts.

The Vocational-Technical Education option is designed to prepare teachers of vocational and technical subjects in the Senior High Schools, Area Vocational Schools, and Technical Education

Centers. All elective courses in this option will be in an area of specialization or related fields. Teachers graduating from this option will possess the skills and knowledge required to teach the occupation or family of occupation in their area of specialization.

The Education for Industry option is designed to prepare students to enter industry as training specialists. Due to the expansion of technology and industrial development, there is a rapidly increasing demand for training specialists and training directors in industry.

COLLEGE OF ENGINEERING

The College of Engineering offers professional curricular programs and programs in both Engineering Analysis and Technical Operations. Each of the programs offered leads to a wide range of career opportunities and serves as preparation for further study at the graduate level.

Professional Curriculums: Six four-year, professional oriented curriculums are offered by the College of Engineering, namely, Agricultural Engineering, Ceramic Engineering, Chemical Engineering, Civil Engineering, Electrical Engineering, and Mechanical Engineering. Each of these curriculums is accredited by the Engineers' Council for Professional Development, the recognized national accrediting agency for professional curriculums in engineering. The curriculum in Agricultural Engineering is jointly administered by the College of Agriculture and Biological Sciences and the College of Engineering.

Although the College of Engineering does not offer specific options or majors in each of these professional curriculums, the instruction includes many phases of each respective field. Thus, a Civil Engineering student is graduated in Civil Engineering rather than Structural Engineering, Highway Engineering, Sanitary Engineering, or other such options. However, a student who wishes to study within the areas encompassed by these options will find adequate courses within the Civil Engineering curriculum to prepare himself for work in any of these areas. In the same way the other engineering curriculums include thorough education in various phases of the field of specialization without over-emphasizing one phase to the neglect of others. The professional curriculums lead to a Bachelor of Science degree in the specific professional area.

The courses required in all professional curriculums for the freshman year are as follows:

First Semester		FRESHMAN YEAR	Second Semester *
Ch 101 General Chemistry	4 (3,3)	Ch 102 General Chemistry	4 (3,3)
Engr 101 Engineering Systems	0 (1,0)	Engl 102 English Composition	3 (3,0)

AS or MS or Elective	1		
	17 or 18		18 or 17

* Agricultural Engineering students take Ag 101, Introduction to Agriculture, in addition to other courses in the second semester.

Engineering Analysis Curriculum:† This curriculum is a four-year, engineering science-oriented course of study. Its objectives are two-fold. These are (1) to prepare a student for employment in areas of engineering activity requiring a high level of analytical competency, and (2) to provide a flexible undergraduate preparation for the study of engineering at the graduate level.

The curriculum leads to the Bachelor of Science degree in Engineering Analysis. Requirements for this degree are stated in terms of subject matter area rather than in terms of specific courses. This latitude of course selection permits maximum accommodation of the individual student's interests and career objectives. Degree requirements are as follows:

	<i>Semester Credit Hours</i>
Mathematics (including 12 credits of post-calculus mathematics)	24
Basic Science (including 8 credits of physics)	16
Engineering Science (distributed in at least six engineering science areas)	32
Humanistic-Social Studies	32
Electives	30
AS or MS or Elective	4
	<hr/> 138

The educational objectives of the program will be met by the selection of an area of concentration which will be chosen from several specialty areas offered within the other professional engineering curriculums. The selection of specific courses, particularly in the junior and senior years, will then depend primarily on the choice of the area of concentration.

Maximum flexibility within this program is achieved by permitting a student to defer his choice of specialization until the junior year or later. Such deferral will then allow students from junior and senior colleges not offering engineering to transfer into the program with little or no loss in academic credit.

Technical Operations Curriculum:† This curriculum is a four-year, student-interest oriented course of study designed to prepare technical graduates for such industrial functions as production supervision and management, operation and maintenance of plant environmental and energy systems, and technical sales and purchasing.

† Additional information on both the Engineering Analysis and the Technical Operations programs is available from the Office of the Dean of Engineering.

The curriculum leads to the Bachelor of Science degree in Technical Operations. Requirements for the degree are as follows:

	<i>Semester Credit Hours</i>
Mathematics	16
Basic Science (including 8 credits of physics)	16
Humanistic-Social	24
Technical Operations	36
Electives	32
AS or MS or Elective	4
	<hr/> 128

The technical operations courses are only offered during the junior and senior years of the program. Hence, a student from a junior college may transfer into the program at the junior level with little or no loss of academic credit.

AGRICULTURAL ENGINEERING*

The graduate in Agricultural Engineering, with broad training in mathematics, physics, chemistry, and the biological sciences as well as comprehensive coverage of the engineering sciences, is well equipped to apply engineering to many functions affecting the well-being of mankind. The Agricultural Engineer is sought by industry and public service organizations primarily for his ability to apply engineering know-how to agricultural production and processing, and to the conservation of land and water resources. Specific areas of interest include power and machinery, soil and water resources engineering, electric power and processing, structures and environment, and food engineering.

The undergraduate Agricultural Engineering curriculum leads to the Bachelor of Science degree. Based upon fundamental training in the basic sciences, the curriculum includes such engineering sciences as mechanics, fluids, thermodynamics, electrical theory, computing devices and systems analyses. The basic agricultural sciences of soils, plants and animals are included so as to provide a foundation for Agricultural Engineering analysis and design. Recognition is also given to the necessity for being able to synthesize information from any of the applicable subject matter areas, including studies of energy conversion, engineering analysis and the engineering properties of biological materials, and with emphasis upon economy and integrity of design. Research is included in order to

* The Agricultural Engineering curriculum is jointly administered by the College of Agriculture and Biological Sciences and the College of Engineering.

introduce the student to the scientific method. Courses in the humanities are required to provide the graduate engineer with a well-rounded educational experience.

The undergraduate curriculum is designed for both the student who wishes to terminate his formal academic training at the bachelor's level, and also to provide the necessary prerequisites for those who wish to continue in graduate study. Graduate programs in Agricultural Engineering which lead to both the Master of Science and the Doctor of Philosophy degrees are offered.

Since an Agricultural Engineering graduate has a broad training in engineering, in the sciences, in humanities, and in life sciences, he has the pick of opportunities in many areas. Opportunities in Agricultural Engineering include employment with industry as design engineers, research engineers, production engineers, and in sales and service; with state and federal agencies as teachers, research engineers, an extension engineers; as field engineers with the Soil Conservation Service, Bureau of Reclamation, and similar organizations; and with agricultural enterprises as managers, contractors, equipment retailers and as consulting engineers.

The Agricultural Engineering curriculum is accredited by the Engineers' Council for Professional Development.

CERAMIC ENGINEERING

Ceramic Engineering offers rewarding careers for persons interested in making useful products. The ceramic products range from items important to everyday life, such as brick, cement, and glass to more exotic products, such as ceramic fuel elements for nuclear reactors, ceramic parts for electronic equipment and ceramic nose cones, ceramic heart valves, and other prosthetic parts for medical research. A variety of occupations are available to the ceramic engineering graduate thus making it possible to select a type of work that is compatible with individual preferences. Some graduates work as researchers, developing new ceramic knowledge; others are design engineers, creating new processes or new products; still others are engaged in technical sales, supervision of plant operations or in management.

South Carolina possesses a wide variety of ceramic minerals which rank with forests as the richest natural resources in the State and make it possible for South Carolina to contribute raw materials to every major classification of the ceramic industry. South Carolina has a diversified ceramic industry with plants manufacturing portland cement, glass containers, glass fibers, sewer pipes, brick, refractories, special raw materials, and electronic ceramics.

The curriculum of Ceramic Engineering leads to the degree of Bachelor of Science in Ceramic Engineering, and graduate courses are offered leading to advanced degrees. The course is based on a study of the fundamental courses in chemistry, physics, mathematics, and geology, and advanced courses are designed to apply these fundamental sciences to Ceramic Engineering. Courses in the humanities and social sciences together with courses in engineering sciences form major parts of the curriculum. A large number of elective courses permits the individual student to plan a program that is compatible with his particular interests, talents, and educational goals.

The Ceramic Engineering building and equipment are recognized as outstanding throughout the nation. These facilities were provided by a grant from the Olin Foundation.

CHEMICAL ENGINEERING

The graduate of the science-oriented, research-minded Chemical Engineering Department is finding intellectually stimulating and financially rewarding positions in all phases of modern industry. Because of the fundamental nature of the Chemical Engineering curriculum, the graduate is avidly sought by the newer nuclear and space-oriented industries, as well as by the equally important chemical-process industries. Indeed, the chemical engineer is in great demand in areas of technology, such as textiles, metals, aircraft, power, instrumentation, computers, foods, pulp and paper, and petroleum.

The curriculum is built upon a base of *three* sciences (chemistry, physics, and mathematics) with supporting courses in mechanics, electrical engineering, and materials engineering and culminates in a solid core of courses in chemical engineering. In all such courses the emphasis is upon *why* things happen as they do and not *how*; thus, the student is taught principles that will endure and not the methods of the present or past. He is taught to realize that all material things are chemical in nature; hence, the chemical engineer in the practice of his profession may be called upon to work

with anything on the face of the earth. The scope of chemical engineering is broad.

In spite of the strong scientific flavor of the Chemical Engineering curriculum, the faculty is constantly striving to impress upon the student that he is studying engineering and not pure science. The ultimate purpose of engineering is to make some practical use of scientific and engineering theories; hence, economics must always be kept in mind during the design of engineering processes or products. In brief, the chemical engineer in industry, as contrasted to the pure research scientist, is concerned that his company makes a profit.

In industry the chemical engineer may pursue one of two parallel lines of advancement. One path leads to management, and it should be noted that the top management of most chemical companies consists of former technical men. The second and equally rewarding path is in engineering research and development. In this latter category are found the men who have developed the processes and products which shape the modern world in which we live.

The Chemical Engineering Department at Clemson is housed in Earle Hall which is one of the newest and best equipped buildings for chemical engineering education in the Southeast. All members of the Chemical Engineering faculty have been educated at the doctoral level and the department offers work leading to the Master of Science and Doctor of Philosophy degrees as well as the Bachelor of Science degree.

CIVIL ENGINEERING

Civil Engineering is the broadest in scope of the engineering professions, being the parent stem from which most of the other branches of engineering have developed. All branches of Civil Engineering rest on a comparatively compact body of principles, in which the students are thoroughly trained in the classroom, the drafting room, the laboratory, and the field. Particular effort is made to develop those qualities essential to success in any field of endeavor and to fit the graduate to become a useful citizen—a good business man as well as a successful engineer.

The practice of civil engineering involves the planning, design, construction, maintenance, and use of large structures and systems to control and improve the environment for modern civilization. The structures may serve many purposes, such as buildings for commerce and industry, bridges for transportation, vehicles for space exploration, or dams for the control and storage of water or for generation of power. The systems provide essential services: water supply; waste water treatment; rail, air, and water transportation; and systems of highways. Projects such as these require that the civil engineer be trained in the social and economic issues as well as in basic science, engineering science, and technology. Though he may specialize in a particular branch of civil engineering, such as structural or transportation, he will need some acquaintance with all subdivisions of civil engineering as well as of other branches of engineering.

The course in Civil Engineering at Clemson University leads to the degree of Bachelor of Science and is planned to equip the graduate with a working knowledge of the above subjects. The student receives early drill in the basic sciences of mathematics, chemistry, and physics, and is introduced gradually to the engineering sciences and the technical courses in civil engineering. By the end of the junior year the student will have had courses in structural design,

construction materials, transportation engineering, and soil mechanics. These will enable him to choose technical electives in his senior year in the subdivision of his choice. The non-technical electives are sufficient in number to provide breadth in the arts and humanities, and assure that the graduate has a well-rounded education.

The civil engineering graduate is prepared to work immediately upon graduation in practically any of the areas of the profession. He may find himself in responsible charge at an early date, so every effort is made to train him at Clemson in the ethical standards demanded by the profession. All courses are directed toward the development of initiative, self-reliance, and integrity in the student.

The department is located in Lowry Hall, a modern air-conditioned structure erected in 1958. The laboratories are well equipped, and the classrooms are light and conducive to study. The building has an internal television system and the 220-seat auditorium is one of the most attractive ones on the campus.

ELECTRICAL ENGINEERING

Electrical engineering is the largest and most diversified of the engineering disciplines. Its technical society membership is more than double that of any other and the responsibilities of the profession range from highly analytical problem solving to detailed design of electronics, communications and computing systems. Electrical engineers have traditionally occupied key positions in a wide variety of engineering programs and their educational program must be structured to allow for this diversity of career objectives. The Electrical Engineering Department allows this flexibility of course selection in its curriculum. A liberal number of humanistic-social electives provide the graduate with the ability to address himself to both the "how" and the "why" of engineering.

The flexibility of the curriculum allows either a sampling from the many aspects of Electrical Engineering or a concentration in a specific area. The student's interests and career objectives are carefully considered by the Electrical Engineering advising staff in structuring a program of study.

Electrical Engineering can be subdivided into the rather broad areas of networks and systems analysis, communications, electronics, computer science, and power. A brief discussion of each of these follows.

Systems and electric network analysis provides the fundamental core materials in the curriculum. These 18 credits of required work constitute the fundamental studies in analysis and experimentation which receive subsequent further development in elective courses. Computer simulation, mathematical modeling, experimental design and scientific reasoning are representative of the topics covered.

Computers, both analog and digital, are studied extensively in the Electrical Engineering program. Few areas in engineering present the promise of continued growth that is offered by the computing industry. In preparing the student to meet this challenge, the department offers courses in real time computing, computer language structures, the theory and design of digital computers, computation and simulation of physical systems, information processing and data handling. The department operates its own digital and analog computing laboratories and has remote terminal equipment to the University Computer Center.

The study of electronics continues to be one of the most active professional areas in Electrical Engineering. Changes in this field have occurred so rapidly that equipment designed five years ago

is obsolete by present design criteria. The vacuum tube gave way to the transistor 15 years ago and just recently the integrated circuit has replaced the discrete solid state device. The Electrical Engineering curriculum includes basic work in the theory of operation of solid state devices, the design of solid state circuits and the study of integrated circuit technology. Electronic laboratories within the department contain the most modern equipment available for the study of these devices, including special microscopic and micro-manipulation equipment needed in the study of minute integrated circuits.

The study of power systems analysis and energy conversion is carried out in a recently renovated power laboratory. This new facility contains the machinery and instrumentation necessary to explore solid-state-static motor control, dynamic speed and torque measurement techniques and power system stability.

Communication theory may be the most comprehensive field of specialization found in Electrical Engineering. It includes course work in information theory, electromagnetic theory, switching circuits and electronics. Engineers working in communication find themselves studying switching equipment in tele-communications, working on the plasma blackout problem in missile re-entry, studying the design implications of complex missile detection and defense systems or they may be designing antennas and transmitting equipment for space satellites. Some will be trying to comprehend the nature of bioelectricity by studying the human brain.

The Honors Program in the Department of Electrical Engineering has for the past four years accounted for a large percentage of the honors students in the University. All qualified Electrical Engineering students are strongly urged to take advantage of this program since it will provide them with an opportunity to participate in some uncommonly rewarding educational experiences during their final two years of study. Honors students receive individualized professional guidance and special laboratory privileges in many of their courses. Honors students in the past have designed electronic devices, have written complex computer programs and have studied technical material which ordinarily would be reserved for students at the graduate level. Students are asked to contact their Electrical Engineering adviser for more information.

MECHANICAL ENGINEERING

Mechanical engineers are involved in a variety of industries: aerospace, machinery, textile, chemical, automotive, appliance, and many others. Therefore, their education must be rather broad and not overly specialized. It begins with a thorough preparation in the basic sciences: mathematics, chemistry and physics. This is followed by rigorous study of the engineering sciences: electrical sciences, thermal sciences, mechanical sciences, computers, and systems engineering which is a generalized treatment of automatic control systems.

The program is designed to develop technical competence in the three broad technical areas of Thermal Science, Mechanical Design and Systems Engineering.

The thermal sciences are concerned with energy conversion and heat transfer. The chemical energy of fuels may be converted to other more useful forms to propel high-speed jet aircraft, to provide the thrust for space vehicles, or to operate refrigeration or air conditioning systems. The thermal sciences also involve fluid flow phenomena: supersonic flow, aerodynamics, and flow through turbomachinery.

Mechanical design requires a knowledge of the strength of materials; mechanisms for converting motion; stress, strain, and deflection analyses; automatic control; lubrication theory; and other engineering sciences. It involves the application of the basic and engineering sciences to the creative design of a wide variety of new devices and systems from prosthetic devices for the handicapped to completely automated machines for manufacturing plants.

Systems engineering is an outgrowth of automatic control theory. It involves instrumentation, and both analog and digital computers for the mathematical and experimental analyses of complex physical systems. These systems may be made up of various mechanical, electrical, and hydraulic components. It is the engineering science upon which the field of automation is based.

All of the mechanical engineering laboratories and mechanical design rooms at Clemson are modern and well equipped. A new Analog Computer Laboratory has recently been developed as well as a new Instrumentation Laboratory. All research activities in the department are housed in a new, modern, air-conditioned laboratory building.

In order that mechanical engineering students may obtain a well-rounded education, approximately one-fifth of the program is de-

voted to subjects in the arts and humanities. Thus, with a broad education in the basic sciences, engineering sciences, and in the humanities, mechanical engineering graduates are prepared for careers in industry, research, development, mechanical design, management or further graduate study.

The Mechanical Engineering Department offers work leading to the Master of Science and the Doctor of Philosophy degrees as well as to the Bachelor of Science degree.

COLLEGE OF INDUSTRIAL MANAGEMENT AND TEXTILE SCIENCE

The programs of the College of Industrial Management and Textile Science embrace three major areas, teaching, research, and public service. The College is responsible for six graduate programs (two in cooperation with other administrative units), seven undergraduate programs, and a "non credit" series of professional development courses for business and industry. The undergraduate curriculums are in the areas of Accounting, Administrative Management, Economics, Financial Management, Industrial Management, Textiles, and Textile Chemistry. These curriculums are designed to prepare the students for a variety of careers, as well as to furnish an education on which to build for a lifetime. The curriculums recognize the need for an understanding of the basic principles of science and appreciation for the nature of human beings, and the comprehension of the economic, political, and social environment. Flexibility in course selection and choice of areas for emphasis is made possible by secondary concentrations and minors as indicated.

ACCOUNTING

This curriculum leads to the Bachelor of Science degree in Accounting. The program of courses is designed to prepare students for professional careers in accounting and management. The major study of accounting is well supported by sequential courses in English, mathematics, management, economics, and sociology.

The graduate in Accounting is well prepared for entrance in law school, graduate school, or the practice of accountancy, either public, private, or governmental. The study of Accounting in preparation for a career in other areas of Management will provide mastery over an essential tool which reinforces experience and judgment in the decision-making process.

ADMINISTRATIVE MANAGEMENT

The Bachelor of Science degree in Administrative Management is designed for those students interested in careers as professional managers in the less technical areas of management. Such areas include marketing, personnel administration, purchasing, public administration at the local, state and national levels, and other administrative activities. In addition, the qualified graduate of this curriculum will have a background suitable for pursuing graduate study in such areas as marketing, transportation, finance, and economics, as well as the behavioral sciences.

The programs of study included in Administrative Management curriculum is designed to provide the student with (1) an appreciation of the social, political and economic environments in which business firms must operate, (2) knowledge of the functional areas of business, their interrelationship and use of analytical methods in solving problems and (3) some facility in the use of mathe-

matics, statistics, and the behavioral sciences in managing administrative activities.

ECONOMICS

The curriculum leading to the Bachelor of Arts degree in Economics is designed to combine a broad general education with a thorough understanding of economics.

The economics curriculum is administered in the College of Industrial Management and Textile Science. Although separate and distinct from the Bachelor of Arts program in the College of Liberal Arts, it shares several ingredients with that program. The

two programs share an identical freshman year sequence, identical minor concentrations in most cases, and many of the same approved electives.

The degree requirements, effective for freshmen entering 1967-1968 and thereafter, are given below. The Bachelor of Arts degree in Economics requires 128 semester hours for graduation; and whenever scheduling permits, the student will be required to take the courses in the sequence given. The curriculum shown, however, can be considered adequate preparation for graduate study in economics only if it is taken with the mathematics minor.

The courses will be those required for teaching certificates as specified by the South Carolina Department of Education as well as those economics courses required for an Economics major.

Specific requirements for most minors may be found under the section on the College of Liberal Arts and the College of Physical and Mathematical Sciences, Bachelor of Arts curriculum. Requirements for a major in Education with a teaching area in Economics are shown under the College of Education.

A minor in Economics is provided for other degree programs consisting of 15 hours above the sophomore level which must include Econ 314 and 407.

APPROVED ELECTIVES

A list of approved electives for both degree and quality requirements may be obtained from the departmental secretary or from an adviser.

FINANCIAL MANAGEMENT

The curriculum for the Bachelor of Science degree in Financial Management provides the student with a course of study in preparation for a career in such areas as banking, insurance, brokerage and related activities. The student should be well prepared to serve on the financial staff of practically any business firm for the purpose of planning, providing, and controlling the capital of the firm. This curriculum should also prepare the student for service

in government and agencies and programs of government. The graduate with this degree should be adequately prepared for entrance in law or graduate school.

The course work consists largely of courses in English, Mathematics, Accounting, Economics, Management, and the Social Sciences. The special interests of the individual student may be pursued through elective credit.

INDUSTRIAL MANAGEMENT

This curriculum is designed to adequately prepare students for positions of major responsibility in industry, business, government or further academic study. During the first year education in the mathematical and physical sciences is emphasized. In the second, third, and senior years the student's work expands into the areas of industrial engineering, finance, management and the social sciences. As preparation for careers in professional management, the Industrial Management curriculum is predicated on the philosophy that the individual must manage first himself, coupling this objec-

tive with the acquisition of a general education and then acquiring a mastery of the "tools" of management.

TEXTILE CHEMISTRY

The Textile Chemistry curriculum is designed to prepare students for a variety of positions in the textile fiber, finishing, and related industries. This program also constitutes an excellent foundation for graduate study. During the first two years, the student acquires a firm knowledge of chemistry, physics, and mathematics. In the third and fourth years, this basic knowledge is applied to areas of more specific interest to the textile industry. These include fabric and fiber formulation, dyeing and finishing, color science, textile unit operations, and textile instrumentation. Supporting courses in the humanities, English, statistics, quality control, and fiber science are also included.

In addition to the prescribed course work, senior students are encouraged to participate in original research and seminar programs. These programs carry academic credit and serve to introduce the students to the methodology of textile research and development.

The Textile Department also offers the degree of Master of Science in Textile Chemistry and, in conjunction with the Chemistry Department, the Doctor of Philosophy in Chemistry with a major in Textile Chemistry.

TEXTILE SCIENCE

The Textile Science curriculum prepares the bachelor's degree candidate in basic science and textile technology. The first two years are devoted primarily to the study of chemistry, physics, mathematics and English. In his third and fourth years, the student is introduced to the basic and applied science and technology necessary for development and production of fibers, woven textiles, non-woven textile systems, and synthetic polymers.

The curriculum prepares the candidate for research and development work as well as for positions in production, standards, and management in the polymer and textile or related industries and for graduate study in Textile Science, engineering, polymer science, and other related branches of science and engineering.

The Textile Department also offers graduate programs in polymer and textile science and engineering.

COLLEGE OF LIBERAL ARTS

The College of Liberal Arts, in addition to its six major curriculums leading to the degree of Bachelor of Arts, furnishes indispensable services to all other divisions of the University, including nearly all the instruction in the humanities and the social sciences. Major concentrations may be elected in English, History, Modern Languages, Political Science, Psychology, and Sociology; minor concentrations are offered in these disciplines and in Philosophy. In cooperation with other Colleges of the University, minor concentrations are also available in Biology, Chemistry, Economics, Fine Arts, Geology, Mathematics, and Physics. Supporting work is offered in Music and in interdisciplinary humanistic studies.

The College of Liberal Arts offers programs leading to graduate degrees in English and in History.

BACHELOR OF ARTS CURRICULUM

GENERAL INFORMATION

The curriculum leading to the degree of Bachelor of Arts is designed to meet the needs of students who desire a broad general education, with emphasis upon the humanities and the social sciences, as a preparation for intelligent citizenship, for general commercial and industrial life, for government service, and for teaching. This curriculum also provides excellent background for the study of law or journalism.

As soon as feasible in his college career, and not later than the end of his sophomore year, the student seeking the Bachelor of Arts degree will select a major and a minor field of concentration from the following areas:

Major

English
History
Modern Languages
Political Science
Psychology
Sociology

Minor

Biology
Chemistry
Economics
English
Fine Arts
Geology
History
Mathematics
Modern Languages
Political Science
Philosophy
Physics
Psychology
Sociology
"Cluster Minor"

To fulfill requirements for a major concentration, a student takes 24 semester hours credit from courses above the sophomore level, including certain courses specified by the major department; the minor concentration requires 15 credits from courses above the sophomore level, including certain specified courses.

The total number of semester credits required for the degree is 128; of these, at least 12 should be earned in humanities courses numbered 300 or higher, and at least 12 in Social Sciences courses numbered 300 or higher. The humanities are for this purpose considered to include Art, English, Languages, Music, Philosophy, and Religion as well as courses entitled Humanities; the Social Sciences

are here considered to include Economics, Geography, History, Political Science, Psychology, and Sociology.

Students in the Bachelor of Arts program who expect to teach in the public schools may elect Education courses required for teaching certificates by the South Carolina State Department of Education, such courses to be approved by their own departmental advisers.

SCHOOL OF NURSING

The School of Nursing provides two programs designed to prepare the undergraduate student for a career in nursing.

The program leading to the Bachelor of Science in Nursing degree is designed to prepare nurses for the practice of professional nursing in a variety of settings—hospitals, industry, clinics, and public health agencies. The program offers the foundation for graduate study in nursing, and an unlimited opportunity for men and women for sound career development in professional nursing. The baccalaureate program is four academic years and one six-week summer term in length. The student is enrolled in liberal arts and basic science courses during the first two years. These courses are arranged sequentially in order to provide the foundation for professional courses which are planned for the junior and senior years. In addition advanced liberal arts courses are taken during the junior and senior years. Clinical nursing experiences under the guidance of the School of Nursing faculty will take place with patients in the Greenville Hospital Systems and with local public health agencies.

The program leading to the Associate in Arts degree is designed to prepare technically competent nurses who will practice in hospitals and similar agencies. The clinical nursing experiences, under the guidance of the School of Nursing faculty, take place with patients in the Anderson Memorial Hospital. The program covers two years and one summer session. This is a terminal program.

Students enrolled in the School of Nursing must meet the course requirements as described for each program in order to qualify for the degree and for licensure to practice Nursing.

COLLEGE OF PHYSICAL AND MATHEMATICAL SCIENCES

The College of Physical and Mathematical Sciences, attuned to the times and its needs, offers six major curriculums leading to the degree of Bachelor of Science. These are Chemistry, Geology, Mathematics, Medical Technology, Physics, and Pre-medicine (Pre-dentistry).

In addition, a curriculum in Arts and Sciences, with a major emphasis in either Chemistry, Geology, Mathematics, or Physics can be pursued. The fulfillment of the requirements of this curriculum results in a Bachelor of Arts degree.

Not only are the departments in the College of Physical and Mathematical Sciences concerned with their own programs but they work closely with the other academic departments in the University.

This interweaving of the physical and mathematical sciences with other disciplines, such as biology, economics, engineering, management, and others, allows a student greater flexibility and responsibility in designing his own program.

BACHELOR OF ARTS CURRICULUM

The curriculum leading to the Bachelor of Arts degree is designed to meet the needs of those students who desire a broad general education. The first two years are spent in introductory work in various areas in order to give the student breadth of view. This type of background enables the student to take a more intelligent part in the selection of his primary and secondary (major and minor) fields of concentration. The major areas in the College of Physical and Mathematical Sciences are Chemistry, Geology, Mathematics, and Physics.

There are a great number of choices in the minor area from the different academic departments in the University. Thus, a student has a larger degree of flexibility and responsibility in designing his curriculum in the Bachelor of Arts program. The secondary (minor) fields are:

Biology	Mathematics
Chemistry	Modern Languages
Economics	Political Science
English	Philosophy
Fine Arts	Physics
Geology	Psychology
History	Sociology

Furthermore, a cluster minor may be taken in place of a secondary field. The cluster minor concentration should consist of 15 semester credits in courses numbered higher than 300 (with some exceptions). The subject area of the major should be excluded from the grouping in the minor. The groups available in the cluster minor are:

- Group I—Social Sciences
- Group II—Philosophy and Religion
- Group III—Fine Arts
- Group IV—Administration
- Group V—Life Sciences

The major concentration requires 24 semester hours and the secondary (minor) 15 semester hours above the sophomore level unless otherwise indicated. These fit in the basic curriculum for

the three upperclass years with minor variations depending on the specific major or minor selected. Consequently, a student not positive of his major or minor field has the advantage of making his decision while in the curriculum with a minimum loss of credit.

BACHELOR OF SCIENCE CURRICULUMS

CHEMISTRY

Chemistry, an experimental discipline based on observation guided by molecular theory, is of fundamental importance in much of modern science and technology. Its molecular concepts form the basis for ideas about complex material behavior. Due to the fundamental nature and extensive application of chemistry, an unusually large variety of challenging opportunities to contribute in the science-oriented community are open to the student whose education is built around the principles of this discipline.

The curriculum in chemistry provides, through its advanced chemistry courses and large number of elective hours, a program that may be suited to a student's specific needs, whether he be interested in graduate work; industrial chemistry, sales or supervision; or related professional fields. [Significant features of the program are the student's extensive participation in experimental laboratory work and his association with teachers who also pursue research activities. Because the undergraduate and graduate studies are closely connected, an undergraduate may elect to take part in a research investigation during his junior and senior years.]

GEOLOGY

Geology is a relatively young science. The word itself is only about 200 years old. It means the science of the earth. Such a science must be involved with the physics and chemistry of materials which comprise the earth, but equally important it must consider the development of life on earth. Fundamentally, then, the chemical, physical, and biological responses to various environments on and in the earth must be thoroughly understood so that the historical development of the earth may be deduced, predictions of the future inferred, and natural resources intelligently developed.

Industry in our modern civilization is dependent on minerals and rocks. Metals have their origin in them as do our chief power sources, coal, petroleum, and radioactive minerals. The power and wealth of nations depend largely on their exploration, control and development of mineral wealth.

Geologists today are entering upon a new era. Widening horizons are indicated by employment not only in mineral producing industries but by railroads, municipalities, engineering firms, and water authorities. For this reason, it is important that the geologists' education rest on a broad yet rigorous base.

This curriculum provides the student with the fundamentals in the geological sciences and excellent support in the other basic sciences. On successful completion of the Bachelor of Science program the student should be adequately prepared for employment or for graduate study in any field of geology.

MATHEMATICS

The mathematics curriculum is designed to give basic training to those students whose ultimate goal is the creation of mathematical concepts and methods that are of basic and general applicability to the desired subject whether it be physics, computer science, communication theory, data processing, statistics, operations research, economics, or any branch of the physical sciences in which a strong mathematical background is a prerequisite. In addition to containing basic mathematics courses which are needed to prepare the student for the present day mathematical world, the curriculum allows the student in his junior year, to select one of seven optional sets of courses which will provide an introduction to an area where mathematics is applied. These options are physics, operations research, computer science, managerial science, communications, chemistry, and statistics.

214 Degrees and Curriculums

This curriculum provides an adequate background for the student who plans to pursue graduate study in mathematics and at the same time adequately prepares the student to fill many interesting positions in space research, computer development, business, or government research.

MEDICAL TECHNOLOGY

Medical Technologists are qualified to perform a wide variety of chemical, microscopical, and bacteriological tests to aid physicians in the detection, diagnosis, and treatment of disease. Some medical technologists are responsible to a medical doctor, generally a pathologist, while others work under the supervision of a medical scientist who specializes in a particular branch of clinical science. The largest group of medical technologists work in hospital laboratories.

In cooperation with the Anderson Memorial Hospital and the Greenville General Hospital, Clemson offers a four-year curriculum leading to the Bachelor of Science in Medical Technology. The student spends the first three years of this program in class work at Clemson and the fourth year at the Anderson or Greenville hospital, according to the student's choice and previous agreement with the hospital. While in residence in Anderson or Greenville, the student will take specified courses under instructors on the hospital staff. During the fourth year of work, both room and board are furnished by the hospital.

Upon satisfactory completion of the prescribed courses, the student will be awarded the Bachelor of Science degree in Medical Technology.

PHYSICS

Physics is the fundamental science. The word physics comes from the Greek term meaning nature. Therefore, physics is a science dedicated to the study of all natural phenomena. Physics is the foundation for the other experimental sciences. The physics curriculum is designed with this point of view.

The first two years of the physics curriculum is generally the same as that for mathematics, the other physical sciences and engineering. During the junior and senior years the physics student is given a strong background in the basic physics courses at an advanced level and is allowed to specialize in a variety of other fields by selecting one of eight options. The options are astrophysics, bio-

physics, chemical physics, computer science, electronics, geophysics, mathematical physics, and physics. After completing one of these curriculums the student is prepared for positions in industry (*e. g.*, aircraft, electronics, petroleum, textiles, pharmaceutical) and government laboratories (*e. g.*, space research). Those students who select the physics or mathematical physics options are well equipped for graduate study in physics.

PRE-MEDICINE AND PRE-DENTISTRY

Medicine and dentistry need individuals with a diversity of educational backgrounds and a wide variety of talents and interests. The philosophies of education, specific premedical and predental courses requirements, other qualifications for enrollment, and systems of training vary among the medical and dental schools, but all recognize the desirability of a broad education—a good foundation in the natural sciences (mathematics, chemistry, biology, and physics), highly developed communication skills, and a solid background in the social sciences and humanities. The absolute requirements for medical and dental school admission (16 credit hours in chemistry, 8 credit hours in biology, 8 credit hours in physics, 6 credit hours in English, and 6 credit hours in mathematics) are purposely limited in order to allow latitude for developing individualized undergraduate programs of study.

The student preparing for a career in medicine or dentistry can major in the behavioral or natural sciences, and many do major in one of the sciences; however, this is not necessary. The Association of American Medical Colleges and the American Association of Dental Schools recommend that the premedical and predental student should feel free to develop his major area of interest, realizing that the medical and dental school is more interested in the quality and scope of the work accomplished than in the time spent or the major field chosen. It is possible to major in a nonscience area, carrying the necessary science courses as electives; however, since so much of medicine and dentistry is derived from a scientific basis, the student who majors in a nonscientific field and elects the minimum number of required science courses must excel in them to insure the adequacy of his preparation.

A suggested curriculum in Pre-medicine and Pre-dentistry, offered here, is designed to meet the general entrance requirements of most medical and dental schools and, as well, to provide a broad education in the natural sciences, the social sciences, the humanities, and communication skills.

Those preparing for the study of medicine are advised to complete four years of undergraduate work before entering a medical school, although some medical schools will admit an exceptional student after three years of preparation. Many dental schools will accept the better student after three years of preparation.

THE SOUTH CAROLINA AGRICULTURAL EXPERIMENT STATION

The South Carolina Agricultural Experiment Station is the research branch of the College of Agriculture and Biological Sciences. The nucleus of its research planning and efforts are performed by scientists in 16 departments and two special units located on the campus at Clemson. Each department conducts specific research projects in its own field. The findings from these projects are made known to the public through special publication and news releases. Five branch experiment stations, each located in a different area of the state, operate as separate units under the direction and organization of the Clemson station.

The goal of the station is to provide, through research, needed materials, techniques, and information which can result in more effective agricultural production and marketing. The farmer's work can be made easier, cheaper, and more profitable by applying the information obtained through research designed to learn what effect current farm practices have on the financial return he gets. Newer agricultural methods, not yet put into use by farmers, are also studied with the appropriate release of findings.

The opportunity is available, to a limited number of undergraduate students in most of the departments, to work and gain experience in research methods and procedures. Many of the departments also offer Graduate Research Assistantships to students interested in working on a research program while pursuing a graduate degree program in the corresponding discipline.

Laboratories of the station are open for inspection by students, farmers, and the public in general. Information may be requested on any specific problem encountered in Agriculture by writing to the station Director. A full report of the work and expenditures of the South Carolina Agricultural Experiment Station is published annually. This and other publications of the station will be sent, upon request, free of charge.

FOUNDATION SEED AND SEED CERTIFICATION

The South Carolina Foundation Seed Association is charged with the responsibility of increasing breeder seed of adapted Experiment Station and USDA varieties to foundation and registered seed in order that seedsmen and farmers might obtain these varieties at the earliest possible time. There are 16 crops and 55 varieties in the Foundation Seed Program.

The South Carolina Crop Improvement Association inspects and certifies fields for farmers where foundation and registered seed is planted in order that certified seed can be produced.

FERTILIZER INSPECTION AND ANALYSIS

The Fertilizer Inspection and Analysis Division functions as one of the five divisions in the College of Agriculture and Biological Sciences, Clemson University. Since 1893 this division has been procuring official samples and analyzing them to see that the guaranteed analysis has been met, inspecting for proper bag printing and weights of fertilizer. Before any fertilizer is offered for sale in South Carolina, it must be registered with the Fertilizer Inspection and Analysis Division. The director and eight part-time inspectors, who are also deputized as insecticide inspectors, visit all fertilizer and insecticide manufacturing plants. Samples are procured at plants, farms and dealers' warehouses, and as far as possible, in proportion to the sales of individual companies.

Some 6,000 fertilizer samples and 1,800 to 2,000 insecticide samples are procured annually. Normally, the percentage of samples deficient in analysis for fertilizers averages about 8 to 12 percent.

with refunds amounting to some \$79,000. The penalty refund is made to the ultimate user. In the case of a deficiency in nitrogen the penalty is three times the actual value of the shortage, while for phosphoric acid and potash it is four times the value of the shortage.

The Annual Bulletin contains the following principal items: Fertilizer usage data; the average analytical findings by brand and grades of those samples meeting the guarantee and those not meeting the guarantees—deficient—along with the names, addresses and telephone numbers of all inspectors.

The Agricultural Chemical Services Department performs the analytical work for both fertilizers and insecticides.

THE CLEMSON UNIVERSITY EXTENSION SERVICE

The Clemson University Extension Service is a branch of Clemson University and is a cooperative service supported by the counties, the State, and the Federal government. The Extension Service is responsible for conducting, with all people of South Carolina, the cooperative educational and demonstration programs in agriculture and home economics of Clemson University and the United States Department of Agriculture.

The function of the Extension Service is to make available to farmers, homemakers, and rural boys and girls, through on-the-farm service, demonstrations, meetings, newspaper articles, publications, radio and television broadcasts, and other suitable methods, the results of research and successful farm and home experiences. The Service also assists, through interpretation, practical demonstrations and otherwise, in applying and using this information to improve farms, farm homes, and communities, to the end that a safe, sound, and progressive rural life and agriculture may be built.

The annual plan of agricultural and home economics extension work is developed and carried out with close cooperation between the Extension Service and the farm and home leadership of the State, the counties, and the rural communities and neighborhoods.

The Staff of Agricultural Extension Workers includes the director, associate director, 3 state program leaders, 3 district supervisory agents, an administrative assistant, 46 county agents—one in each county, 10 area agents, 47 associate county agents, 57 assistant county agents, and 69 agricultural specialists in agricultural economics, agricultural engineering, agronomy, 4-H club work, dairying, crop insects and diseases, cotton ginning, forestry, horticulture,

animal science, marketing, poultry and turkeys, publications, community and resource development, soil conservation, visual instruction, and television.

The Extension Home Economics Staff includes a state home economics program leader, 3 associate district supervisory agents, an assistant to the state home economics leader, 46 home economists—1 in each county—15 associate home economists, 49 assistant home economists, and 9 specialists in clothing, family life, 4-H club work, home management, nutrition, housing and house furnishings.

LIVESTOCK-POULTRY HEALTH DEPARTMENT

The Clemson University Livestock-Poultry Health Department is consolidated under one Director with the United States Department of Agriculture, Agricultural Research Service, Animal Disease Eradication Division, and is known as the State-Federal Livestock Disease Eradication Program. This department is charged with the control and eradication of contagious, infectious and communicable diseases of livestock and poultry, and with the inspection of meat and meat by-products at slaughtering and processing plants under state inspection. When requested investigations are made, consultations are held and assistance in diagnosis is rendered. This department further organizes, develops, and carries on education programs for the control and eradication of diseases. Quarantine measures are employed to prevent, as far as possible, the introduction or spread of livestock diseases into this state.

The Clemson Livestock Laboratory, a fully equipped modern laboratory staffed with highly trained personnel, is maintained 14 miles northeast of Columbia on U. S. Highway No. 1, at the site of the Sandhill Experiment Station. This laboratory is prepared to assist veterinarians and owners of livestock and poultry in making postmortem laboratory examinations and bacteriological and pathological studies to aid in the diagnosis of diseases. If necessary, sufficient equipment can be sent into the field to diagnose and control disease on the spot.

The administrative office is located in the Livestock Laboratory. Adequate records and identification of livestock are kept. A staff of veterinarians works from the Columbia office, and field veterinarians are located in various sections of the State. In addition to the regular field force of veterinarians directly connected with the Columbia office, practicing veterinarians are commissioned as State-Federal Accredited Veterinarians and assist in the eradication of

infectious diseases of livestock. At present there are 132 veterinarians so commissioned and their locations are such that the Clemson University Livestock-Poultry Health Department is in a position to control and eradicate disease promptly and completely in all sections of the State.

This department is required by legislative enactment and supported by legislative appropriation.

THE SOUTH CAROLINA STATE CROP PEST COMMISSION

The act creating the State Crop Pest Commission was passed by the legislature in 1912. According to the act, five members of the Board of Trustees of Clemson University shall compose the Commission.

The purpose of the Commission is to prevent, as far as possible, the introduction into South Carolina of injurious plant pests and to limit the spread of those already within the State. The Commission is also charged with the enforcement of the Bee Disease Act and the South Carolina Economic Poison Law.

The work is performed by the promulgation and enforcement of certain rules and regulations which in the judgment of the Commission are necessary to protect the agricultural interest of South Carolina. The enforcement of the regulations is the responsibility of the State Entomologist, State Plant Pathologist, and their agents.

THE OFFICE OF ENGINEERING RESEARCH

The Office of Engineering Research of Clemson University was established in the College of Engineering in July 1962. Its purpose is to coordinate and stimulate the research activities in the College of Engineering. These activities include the contribution of new knowledge in engineering science by prosecuting a vigorous program of basic research, the conduct of programs of developmental and applied research as a service to the industries of the State, and the determination of uses for the material resources of the State and thereby to encourage the growth of new industries.

The active research staff consists essentially of the faculty members of the College of Engineering and other divisions of the University. The laboratories of all departments, as well as the newly constructed 60,000-square-foot Rhodes Engineering Research Center, are available to the Office of Engineering Research in its investigations.

Research is the foundation for progress in a modern society. The well-equipped physical facilities and the thoroughly competent professional staff available to the Office of Engineering Research constitute extremely valuable resources for continuing and expanding this research effort.

OFFICE OF INDUSTRIAL AND MUNICIPAL RELATIONS COLLEGE OF ENGINEERING

Seminars, workshops, institutes, short courses, and conferences are conducted for engineers of South Carolina and neighboring states. These activities are designed to keep the engineer abreast of changes in modern technology through a non-credit continuing engineering education program sponsored by the Departments of the College of Engineering and coordinated by the Office of Industrial and Municipal Relations.

Recent programs which have been presented include: "Air and Water Pollution Control," "Engineering Application of Digital Computing," "Quality Control and Materials Testing for Highway Engineers," "Solid State Devices in A-C and D-C Motor Control," "Use of Ceramics in Surgical Implants," "Analog and Hybrid Simulation in Industrial Systems Design," "Equipment Selection and Economics," and "Controls and Computations in Power Systems."

All engineering departments participate in the Junior Engineers' Scientists' Summer Institute (JESSI) in which talented high school students receive a 2-week orientation in the Sciences and Engineering.

Refresher courses are coordinated for the National Engineer-in-Training and the Professional Engineer examinations for engineers employed in the Piedmont region of South Carolina.

With the assistance and support of the Department of Environmental Systems Engineering, continuing education programs in environmental control are made available to state, county and municipal agencies and professional organizations such as the South Carolina Water and Pollution Control Association. These programs take various forms, such as the writing of correspondence manuals for water and wastewater treatment plant operators, and conducting schools, workshops and seminars on various topics in environmental control for both the practicing technician and the official charged with the program administration. A national workshop has been co-sponsored with the Federal Water Pollution Control Administration on "Educational Systems for Operators of Water Pollution Control Facilities."

THE OFFICE OF PROFESSIONAL DEVELOPMENT
AND INDUSTRIAL RELATIONS

COLLEGE OF INDUSTRIAL MANAGEMENT
AND TEXTILE SCIENCE

One-fourth of the population of the United States will go back to school this year. More and more people including educators, have abandoned the idea that education is something that takes place during a block of time between six and eighteen (or twenty-two). It is lifelong.

The Professional Development Program is one answer to this "fourth dimension" of education. Now over thirteen years old, the program has served over 1,500 persons in one- and two-week long seminars plus hundreds more in various one- and two-day short courses.

The primary aim of the program is to provide a means and a place for business and industrial people from all levels and all areas to come back to the campus and retread their professional skills, to learn new ones, and to sharpen up old ones in the labs, classroom and during "midnight oil" sessions with other professionals.

Drawing on the full resources and faculty of Clemson University, the Professional Development Program for 1969 offered courses from introductory management to high level computer technology. It served an enrollment from 22 different states and two foreign countries, who represented 101 various business and industrial firms. The staff and faculty were secured from 10 different states and represented 5 universities and 25 different corporations.

A high percentage of participants in several of these courses already held their Ph.D., while quite a few had not completed their baccalaureate programs. This further emphasized the realization among professional people that "learning knows no age limit, nor does it know any skill level."

TEACHER EDUCATION

Agricultural Education. The members of the staff of Agricultural Education visit all beginning teachers for the purpose of assisting them on the job and also for the purpose of collecting information which may prove helpful in improving the work of teacher education at the University. In addition, conferences of teachers are held and consulting services made available in the interest of the professional growth of agricultural teachers, the

rendering of service to agricultural communities, and the development of leadership among agricultural youth through the program of the Future Farmers of America.

Information concerning any phase of the in-service education activities in Agricultural Education may be secured by contacting the Head, Department of Agricultural Education, Clemson University.

Trades and Industrial Education. The University, in cooperation with the State Department of Education, is glad to assist those who teach vocational subjects in day trade schools and evening trade and industrial classes by supplying a trained man to assist in the work of organizing classes, organizing courses of study, making plans for teaching evening classes, and actually teaching vocational subjects. Requests for information regarding this service should be addressed to Dr. A. F. Newton, Head, Department of Industrial Education, Clemson University, Clemson, South Carolina 29631.

SHORT COURSES AND CONFERENCES

The facilities of the University are made available for special meetings, such as farm groups, rural ministers, religious organizations, and scientific societies; and arrangements are made for special short courses in poultry science, beekeeping, food preservation, cotton classing, dairy science, forestry, water supply and sanitation, ornamental nurseries, etc. Such activities, undertaken in the interest of the general welfare, are encouraged by the University.

CERAMIC ENGINEERING FORUM

The Ceramic Engineering Department, in cooperation with North Carolina State University, sponsors an annual Ceramic Engineering Forum for Ceramic Manufacturers of the Southeast. The meeting place alternates between Clemson University and North Carolina State. This meeting is intended to provide the latest scientific and engineering developments pertinent to Ceramic Manufacturers and to provide a forum for the stimulation of creative thinking.
